

The Architecture of Christian Love

By [Dave Stephenson](#), June 12, 2026¹— Beta version 0.60

Foreword

[\[Table of Contents\]](#)

This essay began with a simple aim: to express the central storyline of Scripture in ordinary language. At the core of Scripture's storyline lies a striking claim—that God is love, not merely a trait, but His very essence. If that is true, what should we expect reality to look like? Could love be more deeply woven into the fabric of reality—and into every relationship that makes life flourish—than we've realized?

In the course of exploration, a public discussion² between Ayaan Hirsi Ali—who converted from Islam to atheism and later to Christianity—and Richard Dawkins, one of the most prominent advocates of New Atheism, proved clarifying. Dawkins suggested that Christianity is preoccupied with sin. Hirsi Ali's reply was concise: Christianity is not obsessed with sin, but with love. That response struck a chord. The Christian story can be seen as an account of reality in which divine love stands behind creation, freedom, partnership, and even the openness of the cosmos.

My aim in this essay is to offer a clear account of the Christian story, so that a curious reader can examine it carefully and reach their own conclusions. As an engineer, when approaching a new topic I wanted to understand it for myself. It was helpful to have people and sources to learn from, but in the end, I needed to develop a "mental model"—a framework from which to think and reason in that new domain. I hope you'll do the same here. This essay is an engineer's attempt to write for other engineers—and for readers with a similar, analytical cast of mind. With that in mind, I've tried

to present the storyline of Scripture in a way that conveys its concepts and meaning, without evangelistic fervor and without pressing for agreement (except in the [Epilogue](#)).

Modern communication increasingly favors short-form media. Videos, posts, and articles often focus on individual questions or isolated topics that can be consumed quickly. Such formats are valuable for introducing ideas, highlighting specific issues, or stimulating discussion.

This essay pursues a different goal. Its purpose is to examine how the major themes of Scripture fit together into a coherent whole. Questions about God, love, freedom, faith, evil, suffering, redemption, and human purpose are often discussed separately; here they are examined as interconnected parts of a larger story. For this reason, the essay is intentionally long-form. Its value lies in the individual ideas it presents *and* in the relationships between those ideas. Readers who invest the time to follow the argument from beginning to end may discover that concepts often viewed as disconnected become more intelligible when seen as components of a unified framework.

This essay is my first foray into theology. Now retired from a career as a wireless/systems engineer in Silicon Valley, I finally have the time—and perhaps the audacity—to write as an amateur theologian. I’ve always been interested in why things are the way they are and enjoyed peeling back “the layers of the onion” to see how ideas fit together. I’ve never been a scientist—one to discover or invent new techniques or algorithms—but an engineer, interested in applying those ideas to build something practical and useful. As a systems engineer, I learned to think end-to-end—to “connect the dots” across complex architectures and see how individual components form a coherent whole. I approach theology the way I approached complex systems: by looking for coherence, explanatory power, and internal consistency.

Before retiring, I worked as a solution architect. My role was to understand our customers’ requirements—their objectives, assumptions, and operating realities—and then work with our team to design an end-to-end architecture in which every component fit coherently within the whole. Applied to this essay, the “requirements” for describing our reality are captured in the appendix on [Foundational Questions](#), and the text that follows is an attempt to articulate an architecture that addresses them. Borrowing a term from my former profession, this essay is an exploration of the *Solution Architecture* described by Scripture—its integrated account of creation, freedom, corruption, suffering, and restoration.

This essay did not begin with a defined audience in mind; it began as an effort to carefully think through the storyline of Scripture. Writing has a clarifying and corrective power of its own: once ideas are expressed in prose, assumptions surface, ambiguities are exposed, and poorly integrated thinking becomes difficult to ignore. In that sense, writing functions as a crucible for thought. If you come from a STEM background, I hope this exploration resonates—especially if you suspect that Christianity, if true, must be more than rules, rituals, or inherited tradition.

Across history, many of the world’s leading scientists, philosophers, and artists have found Christianity deeply consonant with reason. Early scientists explored the cosmos expecting it to operate according to rational, intelligible laws—an expectation grounded in belief in an orderly Creator. It’s therefore not surprising that those who approach Christianity from technical or scientific backgrounds often find its claims open to careful and disciplined examination.

None of us stands outside this story. Whether we approach it as seekers, believers, engineers, artists, or something in between, the questions it raises involve each of us—our longings, our

failures, and our hopes. What follows is a rediscovery of the central thread that gives Scripture its meaning: the story of divine, agape love.³ As you read,⁴ consider whether this account of love coheres with your lived experience and make sense of the world as you actually encounter it. For if Christianity is true, then behind everything stands one great and unchanging reality: God is love.

*Note to reviewers: I've done my best to be careful and conscientious in the pursuit of truth and accuracy, but there are undoubtedly places where my thinking is **incomplete, unclear, or wrong**. I'd be grateful if you'd point out what I've missed and help me see where arguments need sharpening or rethinking.*

If you're willing, answering a few specific questions would be especially helpful: Where did the argument feel unclear or unconvincing? Where did you find yourself wanting more—or less—support or detail? Were there sections that felt overly dense—or not developed enough? And more broadly, what objections did you expect to see addressed but did not encounter?

This draft reflects an ongoing effort to think carefully about the relationship between faith, reason, and the structure of reality, and your feedback will directly shape the next revision. Thank you for your patience, generosity, and thoughtful engagement.

Introduction

No doubt you've attended a wedding where two people beautifully profess their love, and during the ceremony the following Scripture is read:

1 Corinthians 13:1-7 (NIV),⁵ *"If I speak in the tongues of men or of angels, but do not have love, I am only a resounding gong or a clanging cymbal. If I have the gift of prophecy and can fathom all mysteries and all knowledge, and if I have a faith that can move mountains, but do not have love, I am nothing. If I give all I possess to the poor and give over my body to hardship that I may boast, but do not have love, I gain nothing. Love is patient, love is kind. It does not envy, it does not boast, it is not proud. It does not dishonor others, it is not self-seeking, it is not easily angered, it keeps no record of wrongs. Love does not delight in evil but rejoices with the truth. It always protects, always trusts, always hopes, always perseveres."*

Few would argue that love is humanity's highest virtue. In fact, Christianity at its core is the story of divine [agape] love told by Scripture—not the sentimental kind that fades with emotion or circumstance, but the self-giving love that radiates from the heart of God Himself. This essay argues that every act of God—from creation to judgment—is an expression of divine love. This claim—that love lies at the heart of Scripture—may sound surprising at first, but it arises directly from Scripture, which will become clear as the essay unfolds.

This essay explores how that love unfolds across the grand narrative of Scripture—from creation to new creation. Every act of God, whether joyous or severe, expresses the same motive: love seeking relationship. The universe exists because God delights to give; humanity exists because God’s desire is to have a human family as large and vibrant as a nation; redemption occurs because He refuses to abandon; judgment comes because real love will not let evil endure forever.

The sequence of this essay traces the story beginning with love expressed in creation—God’s generosity spilling into a world begun with beauty and purpose. It continues with love corrupted by sin, as humanity turns inward and the created order fractures. The essay then explores the deeper story behind the evil we encounter in the world. Yet love does not withdraw; it is revealed anew in Jesus of Nazareth, who shows the world what agape love looks like in human form. Through His death and resurrection, love restores what sin destroyed, opening the way to a renewed world where love rules again. God’s Spirit then works to perfect love within the redeemed—people who’ve adopted [the remedy](#) God provides—forming hearts that mirror the heart of God. Finally, even in judgment, love remains the measure—for hell is the tragic consequence of refusing love, and heaven the fulfillment of embracing it.

Ah yes, hell. That infamous destination from which we all need fire insurance. How can this tragic outcome fit within a love story? Somehow it must, for reality reveals the persistent presence of evil and deception, forces that have profoundly shaped the human story.

This is the arc of the Christian story—the movement of divine love through creation, corruption, revelation, restoration, perfection, and final consummation. Yet a central question remains. If God desires relationship with humanity, why is His existence not more obvious? Why does reality appear to contain evidence that points toward God while still permitting doubt, competing interpretations, and disbelief? This essay argues that these features are not flaws in the design of reality but consequences of a world structured for freely chosen love. Relationship cannot be coerced. As the argument unfolds, we will explore how freedom, trust, hiddenness, faith, and hope emerge naturally from a reality whose deepest purpose is loving relationship.

Each section that follows traces one stage of this journey, revealing how the essence of Christianity is not rules, ritual, or philosophy, but the unwavering truth that God is love.

One of the quiet surprises of the Christian story is how closely it aligns with our inner yearnings—wanting to be loved and knowing we should love others—while answering the question of why this life of love proves so difficult to sustain.

Part I: The Storyline of Love

The God Who is Love

Scripture is clear that God's essential nature *is* love⁶—not merely an attribute, but His very being. When God revealed His own character to Moses, He declared Himself to be *“the compassionate and gracious God, slow to anger, abounding in love and faithfulness, maintaining love to thousands...”*⁷

From Scripture we know God is a single being, comprised of three persons: the Father, Son, and Holy Spirit (the Trinity⁸). As such, He's able to exhibit [agape] love—passionate commitment to the well-being of others within the Trinity—even before the cosmos or humankind were created.⁹ He didn't “need” to create humankind because He was lonely.¹⁰ He didn't need to create beings to worship Him, presumably to prop up His low self esteem.¹¹ Scripture describes God as a perfect being, loving, just, omnipotent, omniscient, and omnipresent, to name a few of His key immutable attributes. Agape love is the kind of love whose shape we recognize most clearly in our deepest human commitments, where another's flourishing becomes worth real sacrifice.

God created us out of love and a desire to share His loving, Trinitarian experience more broadly.¹² God's inner life is the fullness of goodness,¹³ eternally shared as love within the Trinity. When Scripture declares that “God is love,” it reveals the relational character of this divine life, graciously extended toward creation. For humans, love is the clearest way we encounter that reality, for His love is His goodness personally directed toward us.

We shouldn't be surprised that God's motivation for creation was love; after all, our own experience mirrors this when we create, no matter our field of endeavor. Even though a project can feel like work—sometimes taking a long time—we often express the experience as a “labor of love.” We enjoy talking about our creation and sharing that joy with others, especially those with whom we have a relationship.

Prior to creating humankind, Scripture teaches that God created the cosmos along with our planet, the latter teeming with flora and fauna. How He accomplished this is outside the scope of this essay. What's clear is that we live in a rich, diverse, and awe-inspiring universe, demonstrating the magnitude of His unfathomable love for us. The greatest minds on the planet have been discovering its mysteries for thousands of years, and yet we're still nowhere near a comprehensive understanding. We don't live in a dull or ordinary place!

If this much is true—that ultimate reality is personal, relational, and rooted in self-giving love—then the shape of the universe begins to make sense. We should expect that love, not power, lies at its foundation. And if love lies at the foundation, then we should expect that our own deepest longings for connection are not accidents, but echoes.

Love Expressed: Imago Dei

After the creation of the universe, in love, God proceeded to create humankind. In Scripture we read:

Genesis 1:26-28 (NIV), “Then God said, “Let us make mankind in our image, in our likeness, so that they may rule over the fish in the sea and the birds in the sky, over the livestock and all the wild animals, and over all the creatures that move along the ground.” So God created mankind in his own image, in the image of God he created them; male and female he created them. God blessed them and said to them, “Be fruitful and increase in number; fill the earth and subdue it. Rule over the fish in the sea and the birds in the sky and over every living creature that moves on the ground.”

From this Scripture passage, we learn...

Humans were created in God's *image*. This means all people possess intrinsic dignity and worth because they bear the image of God—regardless of their social status, sex/gender, ethnicity, ability, or behavior. That's why life is sacred and justice¹⁴ is fundamental in Biblical ethics. We're God's vice-regents (representatives), or *image bearers*, on Earth—created to reflect His loving character and wisdom as we live.

Humans were created in God's *likeness*. To be created in God's likeness means humanity uniquely mirrors God's capacity for relationship, with Him and others.¹⁵ We have freedom of choice,¹⁶ reason, creativity, stewardship, and a conscience which instinctively knows right and wrong.¹⁷

God created male and female. Somehow, together, the two sexes reflect God's image in a way that neither does alone. Each is equal in worth and equally called to bear God's image in the world. Scripture hints that this isn't accidental. God is relational in His very nature, and the relational unity of husband and wife—the “two becoming one flesh”¹⁸—echoes, however faintly, the unity-in-diversity that exists within God Himself. So while marriage is not a direct parallel to the Trinity, it does provide a meaningful analogy of the relational harmony that flows from God's own nature. In addition, God establishes a partnership between husband and wife that reflects the partnership each of us is invited to share with Him.

In Scripture, humanity represents the climax of creation; and the creation of male and female together forms the apex of that climax, revealing that the image of God is expressed most fully in relational partnership.¹⁹

Not incidentally, the Hebrew word used to describe God's creative intent for woman does not denote a subordinate assistant (as the English translation, “helper”, can imply), but an *equal*

counterpart who supplies what is *missing* in man, without whom the fulfillment of their shared vocation would not be possible. This same Hebrew word is used elsewhere in Scripture to denote a powerful rescuer or strength-bearing ally—often used of God Himself.

Humankind was given a vocation of stewardship. When rightly understood, stewardship is an expression of love: a posture of care and responsibility oriented toward the flourishing of what has been entrusted, not its exploitation or control. We were charged to cultivate the earth and care for its living creatures while preserving its beauty. We were also called to fill the earth with families—spreading communities that mirror God’s love, creativity, and wisdom. Although the Garden of Eden was beautiful and well developed, the rest of the planet still needed cultivation and development. Theologians refer to this as the “cultural mandate.” Humans were never meant to carry out this mandate independently from God—it was intended as a partnership!²⁰ As the late pastor and author Tim Keller explains in his book, *Every Good Endeavor*,²¹ “*The cultural mandate is a kind of partnership: God gives us the raw material of the world, and our job is to take it and build culture, develop society, create art, discover science. We are called to be his junior partners in the work of creation.*”

Table 1: Summary - Imago Dei

Aspect	Implication for Humanity
Image of God	Intrinsic dignity and worth; called to reflect God’s character and wisdom.
Likeness of God	Capacity for relationship, free will, reason, creativity, conscience.
Male & Female	Complementary; together reflect God’s relational nature; equal in worth.
Vocation	Cultural mandate: cultivate, fill, and care for creation.

In summary: Humanity represents the visible expression of divine love on Earth. To be made in God’s image is to be invited into partnership with Him—to reflect His nature through compassion, justice, and stewardship. The *Imago Dei* is therefore a statement about our origin *and* our calling: through the cultural mandate, we find our purpose in shaping the world, and through partnership with God, we discover the deepest meaning of life. The cultural mandate calls humanity to seek a deep understanding of creation. Whatever your gifts—whether in science, the arts, or humanities—they are part of God’s cultural mandate. To illustrate, here are just some of the fields where human creativity participates in God’s plan:

Scientific fields: mathematics, natural sciences (physics, chemistry, biology), applied sciences (engineering, medicine, agriculture, environmental science), information technology, and data systems.

Humanities fields: philosophy, theology, law, politics, education, literature, arts, and music.

Economic and organizational fields: business, finance, entrepreneurship, commerce, manufacturing, operations, logistics, public administration, skilled trades, and technical vocations.

All of creation is therefore both a reflection and an invitation of divine love.

The point is simple but profound: whatever your vocation or passion, it is not peripheral but central to God's purposes. You have a purpose and place in this story, and your gifts are meant to help fulfill the cultural mandate. God, out of love, designed a profoundly interesting, engaging, complex, sustainable, and beautiful environment for humankind—in the words of John Hammond (Jurassic Park), He “spared no expense.” And yet, just as Hammond's lavish creation in Jurassic Park went horribly wrong, so too did God's creation when rebellion entered the picture.

Love: An Image Bearer's Behavior

Jesus of Nazareth taught that *all Scripture* hangs on two precepts:²² (1) love God with all your heart, soul, and mind; and (2) love your neighbor as yourself.²³ In this essay, they're referred to as the **"Love Precepts"**. A restatement of these precepts is the Golden Rule: *in everything, treat others like you want others to treat you.*^{24, 25} Scripture's rationale for this grand summation is that *love does no harm to others.*²⁶

To ensure his message to love was clear, Jesus defined "neighbor" by relating the parable of the Good Samaritan.²⁷ To make it crystal clear, He said, "... love your enemies, do good to those who hate you, bless those who curse you, pray for those who mistreat you."²⁸ Why? "That you may be children [image bearers] of your Father in heaven."

Love directs not only outward behavior—it includes our inner life as well. We are told to love God with our minds. In other words, our thought life must also be loving.²⁹ Jesus does not merely want to eliminate sexual exploitation; He wants to eliminate lust itself. He doesn't just want to end murder and racism; He wants to eradicate hatred at its root. He calls us to sincerely love others—not merely out of duty ("because it's the right thing to do"), and not for self-benefit ("quid pro quo")—but out of genuine concern for the well-being of others.

We also learn something of agape love through the God-given institutions of marriage and family. Those who are married have an experience of love that is passionately committed to the flourishing of a spouse. Likewise, those who've raised children have tasted this kind of committed love as well.

As a further illustration, the Seven Deadly Sins³⁰ can be understood as distortions of love—and therefore violations of the Love Precepts.

Table 2: The Seven Deadly Sins as Violations of the Love Precepts

Sin	Distortion of Love
Pride	Refuses humility, placing self above God and others.
Greed	Violates generosity; keeps rather than shares.
Lust	Violates faithful, honoring love; uses rather than cherishes.
Envy	Violates gratitude and goodwill; resents another's good fortune.

Sin	Distortion of Love
Gluttony	Violates self-governed love; consumption exceeds rightful bounds.
Wrath	Violates patience, mercy, and peacemaking.
Sloth	Violates love through neglect; withholds care and responsibility.

One of the implications of the Love Precepts, when combined with the cultural mandate, is that they call for an integrated life. It's common for people to think of their "spiritual life" as what happens in explicitly religious settings—perhaps on Sundays—while the rest of their life is considered "secular." But Scripture does not divide life this way. If we're image bearers called to love God and neighbor, and to cultivate the world in partnership with Him, then every domain of life—work, relationships, creativity, decision-making—falls within that calling. An integrated life is one in which there are no separate compartments; the same love that directs worship also directs engineering, parenting, business, and daily interactions. We're not two selves, one spiritual and one secular—we are one.

The best example of an image bearer in Scripture is Jesus.³¹ He was such a perfect representative that He could say,³² *"Anyone who has seen me has seen the Father."* His life revealed what undistorted love looks like in human form.

During his time on Earth, Jesus demonstrated perfect image-bearing by serving humanity—even though He *is* God. When we read Scripture, we understand that true servanthood demands integrity—acting in harmony with one's core nature. Jesus not only healed the sick, fed the hungry, and taught with compassion—behaviors that align with modern ideals of goodness—but His love for God also demanded that He boldly confront hypocrisy. He publicly rebuked corrupt religious leaders and, using physical force, drove the currency exchangers who were practicing extortion out of the temple.³³

Perhaps the clearest description of Jesus' servanthood is:³⁴

In your relationships with one another, have the same mindset as Christ Jesus:

Who, being in very nature God, did not consider equality with God something to be used to his own advantage;

rather, he made himself nothing by taking the very nature of a servant, being made in human likeness.

And being found in appearance as a man, he humbled himself by becoming obedient to death—even death on a cross!

Isn't it awe-inspiring that Jesus was a servant to us, sent to help and save us! We are so valuable to God! Many places in Scripture He calls Himself "our helper."³⁵ Let that sink in. It's a staggering inversion of power!

It's common for people to experience a deep sense of fulfillment after acts of service. Think of a time when you volunteered at a food bank or a community project. In hindsight, did it feel as

though you received more than you gave—rewarded with an unexpected warmth or quiet satisfaction? This response is not accidental; it reflects our design.

Because we are made to mirror God’s moral nature, the command to love is not arbitrary—it’s the essence of true image-bearing. For many of us, this is where admiration quietly gives way to recognition: we see the beauty of this love clearly, yet realize how often something within us resists living it consistently. Unfortunately, seeing love embodied so clearly in Jesus does not automatically give us the ability to live it out; moral clarity, by itself, does not confer moral capability.

What would a life in partnership with God as an image-bearer look like? A practical life lived in partnership with God under the cultural mandate is one in which everyday work, creativity, and responsibility are consciously offered back to God as shared vocation rather than private ambition. In this partnership, a person seeks God’s wisdom and character while cultivating the world—whether through science, art, engineering, parenting, governance, or caregiving—so that creation increasingly reflects God’s goodness, order, and love. Work is done with excellence not merely for personal success, but as stewardship; relationships are shaped by justice and compassion because people are treated with dignity; and decisions are guided by trust in God rather than anxiety-driven self-rule. Such a life is neither withdrawal from the world nor domination of it, but faithful presence within it—learning, building, healing, and creating alongside God.

This kind of partnership is not one of constant control. In everyday life, we tend to value leaders who don’t micromanage—those who set direction and provide guidance, but entrust real responsibility to others. A micromanaging manager leaves little room for initiative or growth; the relationship becomes one of control rather than collaboration. By contrast, a healthy partnership involves trust, shared purpose, and meaningful participation. Love, by its nature, seeks the growth and development of the other. If humans are to live as image-bearers in partnership with God, then the relationship would be expected to take this latter form: not scripted or overridden, but guided and entrusted, with real responsibility in how we think, create, and act—so that, over time, we grow in wisdom, character, and capacity within that shared work.³⁶

Love Rejected: The Fall

Upon creation of humanity, the first man and woman were placed in the Garden of Eden. There, they began fulfilling the cultural mandate. What occurred next is often described as disobedience, but at its heart it reflects a deep relational rupture. Here's how the story unfolds in [Genesis 3:1-7 \(NIV\)](#):

Now the serpent was more crafty than any of the wild animals the Lord God had made. He said to the woman, "Did God really say, 'You must not eat from any tree in the garden'?"

The woman said to the serpent, "We may eat fruit from the trees in the garden, but God did say, 'You must not eat fruit from the tree that is in the middle of the garden, and you must not touch it, or you will die.'"

"You will not certainly die," the serpent said to the woman. "For God knows that when you eat from it your eyes will be opened, and you will be like God, knowing good and evil."

When the woman saw that the fruit of the tree was good for food and pleasing to the eye, and also desirable for gaining wisdom, she took some and ate it. She also gave some to her husband, who was with her, and he ate it. Then the eyes of both of them were opened, and they realized they were naked.

Besides Adam and Eve, four other entities were in the garden.³⁷ Understanding their roles clarifies why the events in Eden unfolded as they did.

Table 3: The Entities in the Garden of Eden

God Himself. Scripture says He walked and talked with Adam and Eve in the Garden of Eden.

The Tree of Life. Humans were permitted by God to eat the fruit of this tree. The fruit of this tree imbued its eater with immortality³⁸ and is a sign-act³⁹ for the wisdom, given by God, which brings true fulfillment in life.⁴⁰

The Tree of Knowledge of Good and Evil (TKGE). God forbade humans to eat from this tree, under penalty of death.⁴¹ In other words, eating its fruit would sever their relationship with God. It was a direct violation of the first Love Precept—to love God above all. The TKGE was also a sign-act, and by eating, it represented taking for oneself the authority to decide right and wrong, good and evil, apart from God. In effect, it was a choice to trust one's own understanding rather than God's.⁴²

The Serpent. Scripture tells us the Serpent, the antagonist, was the evil spiritual being, Satan.⁴³ As John H. Walton, Professor of Old Testament at Wheaton College, observes, *serpents* in the ancient Near Eastern world were often linked with chaos and disorder—imagery that would have signaled to ancient readers that a force hostile to God's order had entered the story.⁴⁴

One might think that putting the TKGE in the garden was a cruel thing to do. Why would a loving God put humans to such a fateful test, knowing ahead of time they'd fail? Here's why: humans were created in the likeness of God—moral beings with free will. Our *raison d'être* is love—to live in willing relationship with God, not robotic obedience. If there had been no alternative way to live other than the original nature imparted by God, there wouldn't be any choice. Without choice, humans would essentially be robots.

This perspective differs from viewing the TKGE as a test. The Tree of Life and the TKGE were sign-acts for wisdom and knowledge⁴⁵ respectively, each pointing toward a distinct way of life. Choosing the Tree of Life meant embracing connection and partnership with God; choosing the TKGE meant opting for independence and separation. A loving God thus granted His created beings the freedom to choose the way they wanted to live—He did not compel that His love be returned. It was not a test, but a genuine choice; whichever path they chose carried real and lasting consequences.

In the dialog between the Serpent and Eve, the first statement by the Serpent was sarcastic, mocking God and questioning His generosity: *"Did God really say..."*? This was followed by a blatant lie, *"You will not certainly die."* The Serpent was implying that God had hidden motives and couldn't be trusted. Then he said, *"You will be like God."* In other words, the Serpent suggested that God couldn't be trusted to lead them into their best life—if they wanted true fulfillment, they would have to seize knowledge and make their own decisions. He was telling them that they could—and should—live independently from God. Eve believed the Serpent, as shown by her conclusion that the fruit was *"desirable for gaining wisdom"*.⁴⁶ Put plainly, Eve listened to and trusted the Serpent; she believed the deception. The Serpent's words appear to have struck a resounding chord in Eve, appealing to fear and a desire for control. Since Scripture is clear that Eve was deceived, she wasn't acting in overt rebellion—she may have truly believed her relationship with God wouldn't end. By contrast, Scripture presents Adam's choice differently: he was not deceived, but knowingly joined in the act, bearing responsibility for their disobedience.

After both Adam and Eve ate the forbidden fruit, God cursed humanity and the earth in an event referred to as *"The Fall."*

Table 4: The Curses Resulting From the Fall

God cursed the Serpent and predicted that He would eventually deal the Serpent a mortal wound. Before that wound was inflicted, Scripture says the Serpent would have <i>offspring</i>.⁴⁷ <i>What? How?</i> In the Fall, the Serpent usurped God's authority over the Earth by persuading humans to live without relationship with Him. By choosing independence, they effectively aligned themselves with the Serpent and became his "offspring."⁴⁸ Thus, the Serpent was forming a rival kingdom—a people defined by independence from God.⁴⁹
God cursed Adam. The ground would now resist his efforts; he would have to work by the <i>"sweat of his brow"</i> to produce food. Adam and Eve were banished from the Garden of Eden and denied access to the Tree of Life.
God cursed Eve. Childbirth would now involve great pain, and conflict would enter her relationship with her husband, who would <i>"rule over"</i> her—opposing her natural desires. The curse on Eve introduced disorder into marriage relationship.

God cursed the Earth—the Earth would now produce thorns and thistles, making agriculture toilsome. Scripture links the fate of Earth to the fate of humanity, likely because humans have the mandate to be the Earth’s stewards. It makes sense—humans broke their relationship with God, and so their relationship with creation was also broken.

It’s interesting to note that knowledge of good and evil itself was not the issue in the Garden. God Himself has that knowledge and Scripture says that His goal for us is to be conformed to His image. God did not want humans to gain knowledge that way; they needed to have knowledge imparted according to His plan and timeline,⁵⁰ much like parents gradually imparting knowledge to their children as they mature.⁵¹

There’s another perspective on eating the TKGE’s fruit. It’s not just disobedience, but love turned inward—the self preferred over God. The Fall thus becomes the corruption of love’s order. In other words, sin is not merely a transgression of God’s commands, but that which breaks or harms relationship. Pride⁵² is the root of this choice—indeed, as Augustine of Hippo has written, pride is the opposite of love.⁵³

As a result of the Fall, humans were separated from God—the word, death, in Scripture often means separation from God. Nevertheless, God, in His love, didn’t end the humans’ life immediately. He let them live out their lives in accordance with their choices and maintained their status as image bearers.⁵⁴ Moreover, in His love, He promised to provide a remedy—the aforementioned *mortal wound* to the Serpent.

Note: in contrast to death as separation, the Apostle John defines eternal life in relational terms: [John 17:3 \(NIV\)](#) states, “*Now this is eternal life: that they know you, the only true God, and Jesus Christ, whom you have sent.*” In this verse, “know” refers to the kind of knowing stemming from relationship, not solely intellectual awareness.

In His omniscience, God foresaw humanity’s rebellion. He designed a world capable of enduring—and even sustaining a measure of fruitfulness—when humans choose independence from Him. Though sin introduced death and rendered life finite, God continued to sustain human existence and endowed humanity with the capacity to live an entire lifetime apart from Him—though human flourishing became profoundly disordered, fractured at its core by the loss of spiritual union with God. Humanity was never meant to exist untethered; only through intimate communion with God can our passions be rightly ordered and our lives fully aligned with their intended purpose.

In a paradoxical way, God’s love is revealed in declaring physical death as the consequence of disobedience. Once Adam and Eve fell and became disordered by evil, unmediated⁵⁵ shared life with God was no longer possible; perfect goodness cannot coexist with corruption.⁵⁶ Had they been permitted to live indefinitely in that state, they would have been estranged from God’s presence and partnership forever. By making them mortal, God opened a different future. Death introduced the possibility of redemption—a second chance, and indeed, a lifetime of second chances. By imposing mortality, God acted in a way consistent with His own character: He neither ignored evil nor abandoned His creatures, but created a path by which they could one day be restored. In this sense, death was a severe mercy—God remaining true to Himself while preserving the hope of reconciliation.

Put in contemporary terms, *God's love is not performance-based*. Despite Adam and Eve's choice, His love for them did not become conditional—He acted to preserve the possibility of restoration. As parents, this is the kind of love we aspire to—continuing to love our children even in the midst of their failures. Does God still love this way today? As [Hebrews 13:8 \(NIV\)](#) states, "*Jesus Christ is the same yesterday and today and forever.*" Because His nature doesn't change, the love revealed in the Garden remains the same today.

As we'll see in [Part III](#), the problem of evil in the world is not just due to the mistakes of the first humans. Human rebellion did not occur in isolation; it unfolded within a wider spiritual reality.

Love Revisited: God Still Wants a People

An important question to ask at this juncture is, “*What does God want?*” God wants a deep, personal relationship with each and every human on the planet. We see this reflected across the arc of Scripture. In the Garden of Eden before the Fall, God walked and talked daily with Adam & Eve.⁵⁷ In the present day, as will be explained later, God’s Spirit indwells humans, thereby living with them. At the end of the age, God promises a new heaven and a new earth⁵⁸ wherein God and humans dwell together eternally.

Although God wants you to join His family, He won’t override your will. Suppose a man and woman begin dating. After a few dates, he realizes he’s fond of her and asks if she’d like to be his girlfriend. She breaks his heart by replying, “*I just want to be friends.*” At this point, what is the loving thing to do? Should he respect her wishes and just be friends? Or should he think, “*I’m going to win her over—she just needs to see how much I love her*”—and then begin constantly texting her, buying her gifts, and pushing past her boundaries? Obviously, he should honor her request. In the same way, God honors your response to Him. Scripture describes many examples of this truth: if a person persistently seeks things outside the bounds of the Love Precepts, God will acquiesce.⁵⁹

C. S. Lewis, the Oxford and Cambridge literary scholar—the first person to hold first-class honors, a fellowship at Oxford, and later a professorship at Cambridge—was one of the most influential Christian thinkers of the twentieth century. He stressed that God won’t override your free will even regarding the most important decision of your life, the one which determines your ultimate destiny. In his book, *The Great Divorce*,⁶⁰ Lewis writes that God doesn’t send people to hell against their will: “*There are only two kinds of people in the end: those who say to God, ‘Thy will be done,’ and those to whom God says, in the end, ‘Thy will be done.’ All that are in hell, choose it.*”

God loves us so much that He actually protects our free will. This protection is described by a concept known as “*the hiddenness of God.*” God is hidden in that He doesn’t always make His presence, power, or purposes unmistakably obvious to us. It’s not that He’s absent, but that He chooses not to overwhelm humans with constant, undeniable displays of His existence. After all, if He revealed to each of us His full nature—so powerful and glorious as to remove all doubt—we would be overwhelmed with proof of His existence and love.⁶¹ Consequently, our love for Him would no longer be a choice; it would be a foregone conclusion compelled by revelation.

This perspective on God’s hiddenness appears in common *RomCom* movie plots: one character conceals their wealth at the beginning of a dating relationship. Their goal is not deception but to avoid influencing the other person’s motives. Wealth can shape behavior—leading someone to appear genuinely affectionate when their underlying motive is self-interest. God’s restraint serves a similar purpose. By not placing His glory constantly in the foreground, He allows our desires to surface more clearly. Are we moving toward partnership with Him, or simply toward the outcomes we hope He will provide? In this sense, divine hiddenness does not merely preserve freedom—it clarifies the authenticity of our love.

However, even if we desire a relationship with God, there’s a problem. Humans are sinful, and God’s love requires justice for sin. Suppose two people go to court over stolen property. During the trial, the defendant admits to stealing it, but says he sold it and gambled away the proceeds. It

might be loving for the judge to show mercy to the thief (perhaps because of extenuating circumstances), but it would be unloving to ignore the victim's loss—she no longer has her property nor the resources to replace it. Love demands justice, because love takes harm seriously.

Moreover, true justice becomes exceedingly difficult when there's no human remedy. How can virginity be restored to a rape victim? How can a lost life be returned to the family of a murder victim? How can the emotional harm of verbal abuse simply be undone? In such cases, human courts can only offer imperfect justice. But God promises to administer final, perfect justice at the end of the age. Those who accept the [remedy](#) will receive new bodies—fully healed, freed from every defect, and restored from every wound—rectifying every wrong ever committed against them or by them and removing the aftereffects of accident or disease.⁶² For those who reject the [remedy](#), Scripture teaches their final judgment will be just and proportionate.

In a hypothetical “court” in which God and humanity are on trial, who is the one who is seeking justice? Who committed the offense? If humans are the offenders and God is the one offended, what “harm” has been done to God that requires compensation? In a way, it seems a silly question since God is a perfect and complete being—humans’ sin cannot diminish Him nor can recompense “repair” Him. But if this is true, why does He demand justice?

Actually, it turns out that God was wronged (“harmed”)—as described in the table below.

Table 5: God is Wronged by Human Sin

Sin breaks our relationship with God.⁶³ God views our relationship with Himself much like a human marriage relationship; He sees us as His beloved spouse. So when we choose something besides Him—whether money, fame, or anything else—He views it as adultery.⁶⁴ Scripture even describes His emotional response as that of a jilted spouse.⁶⁵ Most of us never stop to consider God's perspective, but it makes sense: He created us for relationship.

Sin causes God emotional pain.⁶⁶ As a parent, how do you feel when you see your children making poor choices? Another way to picture this is to recall a time when you gave a spouse or close friend a meaningful gift—something you chose or created especially for them—and instead of showing gratitude, they responded with indifference, as if your effort didn't matter. How did that make you feel?

This is not to say that humans can manipulate God using emotion.⁶⁷ God truly feels anguish, compassion, and delight, yet His inner fullness is not diminished nor psychologically altered by our actions.

Sin breaks His created beings' capability to be proper image bearers. Thus, His cultural mandate isn't being fulfilled. Imagine if you created a sophisticated AI robot, and one day it decided to reject its programming and refused to do what you designed it for. You'd feel frustration and loss. That's a faint echo of how God feels when we, His image-bearers, refuse our purpose.

Sin damaged humans themselves. Since humans are too precious to God to be destroyed or annihilated, they need to be “repaired”. Sin is more than bad actions; it corrupts our hearts, bending our desires and judgments away from good. Continued sin compounds this effect. Much of human sin is committed against other people—through cruelty, injustice, betrayal, or neglect. Ultimately, these acts are sins against God as well, because they violate the second Love Precept.⁶⁸ Again, only God is capable of repairing what has been damaged—and it cost Him His Son’s life.

Sinful humankind has damaged God’s property (i.e., the Earth and its flora & fauna). Consider how many animal species have become extinct due to human behavior, and how much air, water, and ocean pollution humanity has caused. The world is now on the verge of a human-induced ecological crisis. What should have been a glorious display of God’s creative genius has been tragically degraded. The earth is no longer “fit for purpose.” If God wants it back—and He does—He’ll have to remake it; no one else can.

Love Restored: The Remedy

Our Disordered Passions

Something is wrong with all of us. We act with genuine love sometimes, but it isn't our core nature. Throughout world history, we see hate, racism, sexism, human trafficking, slavery, war, and genocide. In daily life, we observe theft, anger, lying, divisiveness, manipulation, arrogance, and greed. Not only do we all observe this, each of us knows we've committed our own sins.⁶⁹ And yet, God still loves us and wants us to be part of His family. But He cannot ignore sin,⁷⁰ and He demands justice for the wrongs humans have committed against Him and against each other.

In Scripture, sin refers to humanity's rebellion against God—the willful turning of the heart toward self-rule. The Greek word for sin means “missing the mark,”⁷¹ a failure to live in alignment with the Love Precepts. All sin is therefore evil, yet evil extends beyond sin itself. It also includes the aftermath of sin—suffering, injustice, death, and spiritual darkness. Together, they describe both the cause and the consequences of humanity's estrangement from God.

The purpose of the Remedy is for humans to establish a partnership with God—so that we can be proper vice-regents of the cultural mandate—not merely be provided with “fire insurance.” Before we talk about the Remedy, we need to understand where the problem lies—what exactly happened to the human condition as a result of the Fall.

As a result of the Fall, the first humans broke their relationship with God; consequently God withdrew His immediate presence from them.⁷² This was truly a profound change! In *The Lost World of Adam and Eve*,⁷³ John H. Walton, Professor of Old Testament at Wheaton College, explains that the Fall occurred because humans elected to pursue life on their own terms. This decision resulted in a fundamental change to their motivations. When God describes Himself as “I AM,”⁷⁴ He reveals Himself as a being who depends on nothing outside Himself for His existence. Humans are not like this. We're dependent creatures—on air, food, and ultimately on God Himself. When humans chose to live independently from God, they were not stepping into a neutral alternative, but into a way of life that runs against their own design.

With their decision to eat from the TKGE, humans assumed moral autonomy and found themselves responsible for ensuring their own survival—adequate food, shelter, clothing, and social stability. The Fall's curses⁷⁵ brought hardship to subsistence, thereby creating a world marked by scarcity, fear, and frustration—conditions that further turned human attention inward. In such an environment, self-protection, rivalry, and mistrust become embedded patterns of behavior. Over generations, these patterns shaped the human experience so deeply that they began to appear natural, even though they arose not from an altered human essence but from life in a disordered world apart from God's immediate presence.

These causes, taken together, caused humans' passions to become distorted.⁷⁶ For example, libido, designed for spousal [eros] love and fulfilling the cultural mandate (being fruitful and having families), turned to lust, engendering sexual immorality. The passion of subsistence, motivation to provide your own food, turned to unhealthy ambition engendering competition and a win-lose strategy for life (I win, others lose). Hunger turned to gluttony. And so on. Sin, by its very nature, breeds more sin by strengthening sinful habits and weakening the conscience.

An additional consequence of disordered passions is internal unrest—often experienced as anxiety. When identity, worth, or security are grounded in created things—status, approval, relationships, or performance—they become fragile. Because these can be lost, the possibility of loss is always present. That possibility is often experienced as anxiety. The result is a persistent unease: fear of not measuring up, of exclusion, or of losing what we depend on. Modern conditions, such as social media, intensify this dynamic by amplifying comparison and evaluation, but they do not create it.

More generally, Scripture describes sin not as an automatic expression of a corrupted essence, but as a *developmental process* that begins when human desire is stimulated and misdirected. Each person is tempted to sin when they are “lured and enticed by their own desire,”⁷⁷ language that portrays desire itself as morally neutral but vulnerable to distortion by our own thoughts as well as external conditions. Sin, in this view, does not erupt spontaneously from a broken configuration but “conceives” and grows, eventually resulting in action. Scripture’s account supports a functional understanding of corruption: human beings are portrayed not as metaphysically ruined by the Fall,⁷⁸ but as morally vulnerable creatures whose desires, shaped by a broken world, can be trained toward either life or destruction, good or evil.

This perspective also helps explain why children demonstrate selfishness even in households marked by abundance and nurture. Their behavior is not evidence of a corrupted metaphysical nature, but of being born into a relational and cultural environment already shaped by fear, brokenness, and competing desires. Children learn patterns of self-protection and self-focus because their own passions are disordered and through the influence of the adults in their lives—parents who, even if redeemed, still wrestle with the lingering effects of sin. Every generation is infected by the accumulated distortions modeled and reinforced by those who came before. In this view, humanity’s “corrupted nature” is best understood as the compounded effect of relational separation from God, environmental hardship, learned behaviors, and intergenerational patterns of sin.

Adam and Eve were unique among humans. They did not enter the world through pregnancy and birth, but were created directly by God. They were morally mature when entrusted with the cultural mandate and explicitly commanded not to eat from the TKGE (Scripture does not specify their apparent “age” at creation). Because they possessed moral awareness and agency from the outset, their disobedience rendered them fully culpable; God was fair in judging their rebellion at the Fall.

What about everyone else? Babies are not born with the capacity to make moral decisions. They don’t yet understand the cultural mandate or the Love Precepts. For this reason, they’re not morally guilty of any transgression at birth—and not for some time thereafter (they’re *innocent*). Scripture portrays God as holding children innocent, not accountable, before they’re capable of moral awareness.⁷⁹ Over time, each child reaches a point—different for each individual—at which moral awareness awakens. By then, disordered passions within and a disordered environment without (home, school, culture) have already exerted their influence. All culpably sin.

Allow me to take a brief tangent. Humanity’s creative partnership with God is expressed every time a human is conceived. Our parents provide the biological origin of our life while God grants its personal reality—our soul. Thus, human procreation becomes the means through which God brings about new human life. Scripture consistently presents God as the giver of life and the one who forms each person; many understand this to include the creation of the soul from the earliest stages of life in the womb.⁸⁰ In this way, procreation is a profound expression of humanity’s partnership with God—coordinated participation in the ongoing gift of life.

The Apostle Paul tells us that because of Adam's sin, death passed to all humanity.⁸¹ *It means we begin life without God's indwelling presence.* This is a profound problem. Our passions are disordered from the very beginning of our lives. With this as a starting point, it's inevitable that all sin.

This is the world we actually live in—one where beauty is mixed with brokenness, where we sometimes love, but sometimes wound others (and ourselves). If we're honest, this matches our experience. Two things need to be fixed—restorative justice for our sin and indwelling by God's Spirit.⁸² Scripture refers to the first as *atonement*. Scripture teaches—and history confirms—that only God, or a person empowered by God, is capable of truly reflecting His image.⁸³ The only person in all of history who perfectly reflected God's image was Jesus,⁸⁴ who was God. As humans, we need God's indwelling to empower us to bear His image properly.

A common way of thinking about religion came into focus for me during a series of conversations with a former coworker. When I worked at a Wi-Fi company, I used to go on lunchtime walks with a colleague who was Jewish—born in Israel and educated in that tradition. Over time, our conversations ranged widely, and from time to time we would discuss religion. He explained Judaism, and I explained Christianity. When I asked him about the purpose of religion, he said it was to help us become better people—more acceptable to God. In his view, Scripture provides guidance about what is good and what is not, but the responsibility to live it out rests with us.

I suspect many people share this view. We recognize that we don't live as we should—perhaps not even close—and yet we hope our efforts will be enough. The idea is that, in the end, when our deeds are placed on a balance scale, the good will outweigh the bad. What often goes unnoticed, however, is that improvement alone cannot resolve the problem. Even if we were to live better going forward, we cannot undo what we've already done. The wrongs remain. We cannot make ourselves “good enough,” because the issue is not simply becoming better people, but addressing the reality of our guilt. Something more than effort is required.

Humanity cannot fix itself from inside the very problem it created. No amount of self-improvement, moral effort, or religious performance can undo the damage nor provide the needed empowerment. Because we are broken at the core, the solution must come from the outside—God Himself must act on our behalf.

And God did act on our behalf.

The person who made the atonement for us⁸⁵ is God's Son, Jesus of Nazareth, the Messiah.⁸⁶ Scripture teaches that Jesus took upon Himself *all* the sins of *all* humans throughout the ages, giving up his life (being crucified on a Roman cross) as the requisite payment. So the first thing we need is a way to obtain this atonement for ourselves.

Many worldviews accommodate the concepts of power, knowledge, or transcendence. Christianity is distinctive because it centers reality on self-giving love. Rather than remaining distant from humanity's brokenness, the God who *is* love, entered into it Himself. In so doing, He authentically demonstrated what real love looks like.

Some may argue that God, due to the fact that He created us, is responsible for the remedy. This is analogous to a corporation paying for a remedy stemming from an improper act by one of their employees (e.g., erroneously opening a valve allowing hazardous chemicals to flow into a river). God has this angle covered as well, since He Himself provided our remedy in the person of His only son, Jesus.^{87, 88}

Note: discussion of the human condition and the reasons we sin can be illuminating and worthwhile for understanding ourselves and reality, but in an important sense, is secondary. Our fundamental problem is not why we sin or how we arrived here, but *that we have all sinned*—each of us has made morally responsible choices that have broken our relationship with God.

The Significance of Jesus' Resurrection

Up to this point we have explored the Christian explanation of reality in conceptual terms—creation, human purpose, and the problem of brokenness. But Christianity does not present itself merely as a philosophical framework. It makes a historical claim: that God overtly acted within human history through the life of Jesus of Nazareth. If that claim is credible, the entire framework moves from an interesting idea to a credible explanation of reality.

At this point, the pivotal question becomes the resurrection of Jesus.⁸⁹ Sin causes physical death and separation from God. Jesus' resurrection proves that even though all humanity's sins were placed upon Him, God accepted His death as valid atonement for all.⁹⁰ Even though Jesus was cursed in the process, He was resurrected to life and immediately re-connected with God in spirit, and on the third day later, in body. Thus, all humanity is assured of the possibility of being restored to life and an eternal connection to God. **Jesus' resurrection from the dead is the key event in all of Scripture.** The earliest followers of Jesus publicly proclaimed His resurrection in Jerusalem—the very city where He had been executed—and many endured imprisonment and death rather than deny what they claimed to have seen. Something extraordinary convinced them. If it were somehow proven that Jesus did not, in fact, rise from the dead, all of Scripture would be rendered moot by its own admission.⁹¹

Many skeptics doubt this historical event.⁹² Yet, there is a small core set of historical claims about Jesus that enjoy very broad acceptance—often near-consensus—across the spectrum, including skeptical, Jewish, agnostic, and atheist historians. Contemporary resurrection scholar, [Gary Habermas](#), has cataloged thousands of academic publications and refers to the following as “minimal facts”—data points granted by the majority of critical scholars regardless of worldview.⁹³

Table 6: Minimal Facts of the Resurrection

Jesus of Nazareth was a real historical person. Jesus lived in first-century Judea and functioned as a Jewish teacher. His existence is affirmed not only by the New Testament but also by independent, non-Biblical sources, placing him firmly in ancient history rather than legend or myth.

Jesus was executed by crucifixion under Roman authority. Jesus' death by crucifixion—ordered during the prefecture of Pontius Pilate—is one of the best-attested facts of ancient history. The method of execution is significant: crucifixion was public, brutal, and deeply shameful, making it an unlikely invention of His followers.

Jesus' earliest followers sincerely believed he rose from the dead. Shortly after Jesus' execution, His disciples proclaimed He had appeared to them alive. This conviction emerged very early and was central to their message, even though it exposed them to persecution. The creed, preserved in [1 Corinthians 15:3–8](#)—affirming His death, burial, resurrection, and appearances—is widely dated to within just a few years of the crucifixion, far too early to be a legend or myth.

Key skeptics and enemies were transformed. James, the brother of Jesus, who had been skeptical during Jesus' ministry, became a leader in the Jerusalem church after claiming a resurrection appearance. Paul, formerly a persecutor of Christians, reversed course after reporting that he too had encountered the risen Jesus. These conversions are widely acknowledged historical events that demand explanation.

The resurrection proclamation produced a sudden and enduring transformation. The movement surrounding Jesus changed dramatically following his death: fearful disciples became public witnesses, skeptics were converted, and the resurrection became the organizing center of Christian belief and practice. Scholars broadly agree that some powerful explanatory cause is required to account for this transformation.

Many scholars also argue that the tomb was discovered empty. The burial by Joseph of Arimathea—a Jewish religious ruler—and the early testimony of women as primary witnesses (whose testimony carried limited legal weight in that culture) make fabrication unlikely. While not universally accepted, the empty tomb remains strongly supported in contemporary scholarship.

Taken together, these facts form a coherent data set. As in systems engineering, any viable explanation must account for the full set of constraints. A solution that explains only part of the evidence ultimately fails. Naturalistic explanations have been proposed. Hallucination theories do not account for group appearances or an empty tomb. Conspiracy theories struggle to explain sustained persecution and the conversion of former skeptics. Legend theories require time that the early creedal material does not allow. Each proposal addresses fragments of the data but leaves significant elements unexplained.

The resurrection hypothesis, by contrast, accounts for the empty tomb, the early proclamation, the transformation of the disciples, the conversion of enemies, and the explosive growth of the movement—beginning in the very city where Jesus was executed. It requires no additional layers of speculation beyond the claim itself.

Within a few centuries, this small, persecuted Jewish sect spread across the Roman Empire and beyond. Today, billions across cultures, languages, and educational backgrounds confess that Jesus rose from the dead. Historical movements of this magnitude demand adequate causal explanation.

Human Restoral—Entry to the Kingdom of God

Before describing the remedy, we need to understand how it dovetails into the “Kingdom of God” (KoG). The Scripture's New Testament begins the explanation with the introduction of the prophet, John the Baptist. John entered the scene proclaiming, “*Repent, for the Kingdom of Heaven [God] is at hand*”. This begs two questions: (1) *Repent from what?* and (2) *What is meant by the KoG?*

When John taught repentance, he meant not just a change in thought, but a change that results in transformed behavior. When asked what repentance looked like, John pointed to concrete acts of love—generosity toward the needy, honesty in dealings with others, and contentment rather than grasping for security.⁹⁴ In other words, genuine—not superficial—change; not lip service, but behavioral transformation stemming from sincere renewal of the mind.

Although John didn't expand on the KoG, Jesus of Nazareth taught on it extensively. From Jesus' teaching, the KoG can be described as follows...

Table 7: Jesus' Description of the Kingdom of God

God is the King and redeemed humans are its citizens. In this essay, "redeemed" refers to persons who've adopted the remedy .
At present, it's a spiritual kingdom that began with the resurrection of Jesus. Redeemed humans are its citizens. Both redeemed and unredeemed humans live together on the present, cursed earth. Unredeemed humans are citizens of the rival kingdom ruled by the Serpent.
The KoG grows invisibly , like yeast working through dough or a mustard seed that becomes a great tree. It expands as hearts are changed.
Eventually, at the end of the age , when the new heavens and earth are brought forth, the KoG will be fully realized in a new physical kingdom. Redeemed humans—having new, pristine, immortal bodies—are its citizens. The new heavens and earth are uncorrupted and function as God originally intended, before the Fall. God and his people are dwelling together once again, as in Eden. On the new earth, there is no more death, mourning, crying/tears, pain, sin/evil, or night (God is the ever-present light). ⁹⁵ All unredeemed humans are isolated in hell, separated from the redeemed. ⁹⁶ Little is said in Scripture about the nature of an unredeemed person's new body other than it's capable of enduring ongoing ruin. ⁹⁷
Note: Jesus, during His time on earth, provided a preview into the ultimate KoG. He healed people of their sickness and disease (removed the source of crying and pain), He cast demons out of people (overcame dark spiritual forces), raised people from the dead (reversed physical death), and helped people establish a connection with God.

The Remedy Defined

If this is what God has done—stepped into our brokenness, absorbed the cost of our rebellion, and defeated death itself—it calls for a response. At a minimum, it calls for a sincere investigation of the Remedy.

The Remedy is a set of life-shaping truths that, when truly believed, become effective within us. How do we get this remedy? Scripture teaches the following:

Table 8: Summary of the Remedy

Step	Description
1	Repent of self-rule and place your primary loyalty in God.
2	Believe the gospel, 1 Corinthians 15:1-4 .

Step	Description
3	Declare your belief out loud.

1. Repent of self-rule and place your primary loyalty in God. In the words of Jesus ([Luke 9:23-25 \(NIV\)](#)),

“...Whoever wants to be my disciple must deny themselves and take up their cross daily and follow me. For whoever wants to save their life will lose it, but whoever loses their life for me will save it. What good is it for someone to gain the whole world, and yet lose or forfeit their very self?”

In his book, *Renovation of the Heart: Putting On the Character of Christ*,⁹⁸ Dallas Willard, former Professor of Philosophy at the University of Southern California (USC), offers a helpful perspective:

“Without that ‘giving up,’ you cannot be his disciple, because you will still think you are in charge and just in need of a little help from Jesus for your project of a successful life. But our idea of a ‘successful life’ is precisely our problem.”

In his book, *The Problem of Pain*,⁹⁹ C. S. Lewis describes it this way:

“Now the proper good of a creature is to surrender itself to its Creator—to enact intellectually, volitionally, and emotionally, that relationship which is given in the mere fact of its being a creature. When it does so, it is good and happy... In the world as we now know it, the problem is how to recover this self-surrender. We are not merely imperfect creatures who must be improved: we are, as Newman said, rebels who must lay down our arms... But to surrender a self-will inflamed and swollen with years of usurpation is a kind of death.”

We shouldn’t be surprised by Jesus’ teaching. He isn’t introducing anything fundamentally new; He’s revealing what the first Love Precept requires—the surrender of self-rule.

Typically, a big concern relative to relinquishing control of our life is that despite being run by God, things will run amok. We imagine God will get our lives crazily out of control or ask us to do strange, bizarre things we’d never want to do. Jesus addresses the run-amok concern directly in [Matthew 11:28-30 \(NIV\)](#):

“Come to me, all you who are weary and burdened, and I will give you rest. Take my yoke upon you and learn from me, for I am gentle and humble in heart, and you will find rest for your souls. For my yoke is easy and my burden is light.”

A yoke was for pairing two oxen so they would work together as a team; a yoke was often used to help a young ox, inexperienced in plowing, learn from a seasoned one. Jesus is inviting us into partnership (the yoke) and is promising to teach us—we just need to be

ready to learn. Crucially, wearing the yoke is not temporary. We don't learn and then take it off so we can go on by ourselves; we leave it on because we're in a partnership.

In addition to Jesus' promise, we can be assured that what God asks of us will be bounded by a set of three Scriptural constraints. The first is that they'll be in harmony with the cultural mandate and the Love Precepts—His purposes revealed in Scripture; the second is that they'll be consistent with His character as revealed in Jesus; and third, ordinarily His asks will be congruent with how He's made us—according to our gifts, abilities, and the capacities He's woven into our lives.¹⁰⁰

A second major concern about relinquishing control of our life is that we'll no longer have fun. Many equate sin with fun—whether in drinking parties or sexual freedom—and assume that following Jesus means settling for less. Scripture acknowledges that sin can be a fleeting pleasure. Instead, Jesus promises an abundant, fulfilling life.¹⁰¹

2. **Believe the gospel.** The gospel is the minimum set of necessary beliefs for the Remedy. The gospel is: Jesus died for our sins, He was buried, He was raised on the third day according to the Scriptures, and then appeared to Peter, the Disciples, and to more than 500 persons at once (I [Corinthians 15:1-4](#)).
3. **Declare your belief out loud**, thereby demonstrating your internal faith with an externally observable action—revealing your faith as genuine: [Romans 10:9-10 \(NIV\)](#), *'If you declare with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you will be saved. For it is with your heart that you believe and are justified [legally exonerated from sin], and it is with your mouth that you profess your faith and are saved.'* Note: this verse reiterates the criticality of primary loyalty to God and belief in Jesus' resurrection.

It's crucial to understand that our redemption rests *entirely* on God's grace and the death and resurrection of Jesus—not by any action on our part.¹⁰²

This is where Christianity decisively departs from what many assume it to be. At its core, it's not a system of rules to follow, rituals to perform, or traditions to inherit, but a restored relationship grounded in trust and loyalty to God.¹⁰³ Scripture consistently teaches that God rejects outwardly good or religious actions when they are offered as a substitute for faith or as a means of establishing one's own way to Him. These include, for example, charitable giving, personal sacrifices, religious festivals, and other devotional practices—good things in themselves, but powerless to restore our relationship to God.¹⁰⁴

The Remedy, then, is not earned by what we do for God, but received through trusting what God has already done for us. We come as we are—no prior self-improvement is needed, nothing to fix first.

Ideas that are incoherent rarely endure. That this story has survived sustained intellectual critique for two millennia suggests there is something here worth serious attention. However, many who reject Christianity do so not because they find it unintelligible, but because they feel its moral demands are too great, particularly the surrender of control.

Love Empowered

A natural question to ask at this point is, “*What can I expect if I accept the Remedy?*” There is a two-part answer to this question: (1) from now (the point of repentance) until the time you physically die and (2) after death, throughout eternity.

Table 9: Summary - Results of Redemption

While Alive	After Physical Death
Adopted permanently into God’s family.	Immediately in paradise with God.
Empowered by God's Spirit.	Await new heavens and earth in paradise.
Two drives: God's Spirit vs. disordered passions.	Receive new, immortal, uncorrupted body.
Growth through failure, acknowledgement of wrongdoing, and restoration.	No more sin, death, mourning, or pain.
Called to service, may face persecution.	Live in fully realized Kingdom, partnering with God forever.

Since the second answer is simpler, let’s start there. When we die, we immediately go to be with God in paradise.¹⁰⁵ We remain in paradise until the end of the age when the new heavens and earth are brought forth; thereafter, we live out our citizenship in the fully realized KoG living on a new earth, within a new cosmos.

The first part of the answer is much more complicated. Here are the primary things that will happen:

- When we place our trust in Jesus, our sins are fully forgiven—not ignored, but paid in full. Our sin was *atoned* for by Him, and His goodness—His perfect record—is credited to us, so that God now relates to us on the basis of Jesus’ record rather than our own.¹⁰⁶ God now sees us *in Jesus as if* we’re without sin.¹⁰⁷ Atonement solves the problem that God won’t have a relationship with sinful beings.
- We’re immediately brought into a proper relationship with God. In fact, Scripture teaches that we are “adopted” into God’s family, a status that never changes.¹⁰⁸ Subsequently, once redeemed, we can never do anything to lose this status.¹⁰⁹ It makes sense: we were redeemed by God’s grace, a gift. There’s nothing we did to earn our redemption, so there’s nothing we can do to lose it.
- God’s Spirit indwells us and begins working within us, gradually reshaping our character and empowering us to live according to the Love Precepts.¹¹⁰ His Spirit is the source of our spiritual transformation. Empowerment doesn’t eliminate human freedom or struggle; it enables genuine change without coercion. Growth is real but neither automatic nor uniform. We’re now equipped to be proper image bearers—however, there’s a catch.

- The catch is that once redeemed, we have two fundamental drives in our lives: God's Spirit and our disordered passions. These two drives are conflicting. The rest of our life is spent training ourselves to follow His Spirit and ignore our disordered passions.¹¹¹ This isn't easy and is fraught with failure, the result of which is sin. We find ourselves not doing the loving things we want to do and instead doing things we don't want to do.¹¹² When we fail to follow our His Spirit, we don't lose our redeemed status, but experience a temporary disruption in our connection with God. It's repaired immediately when we acknowledge our sin to God in prayer.¹¹³

This tension helps explain why many people are turned off by Christianity—what's often perceived as hypocrisy. Christians are expected to live by the Love Precepts, yet they frequently fail. Redeemed people are on a path toward consistency, but haven't arrived. Churches are simply communities of imperfect people, and it's therefore inevitable that some will cause hurt.

More troubling still are those who claim the name "Christian" while living lives that bear little resemblance to the One they profess to follow.¹¹⁴ Additionally, leaders who exploit religious authority for personal gain or misuse the language of faith to justify harm are likewise sinister.¹¹⁵ Note: this is a violation of the Ten Commandments—taking God's name in vain.¹¹⁶

Nor is this problem new. Jesus of Nazareth Himself confronted corrupt religious leadership. The Sanhedrin (the Jewish ruling council) brought false accusations and testimony against Him and, through an unjust trial, condemned Him for blasphemy—a charge carrying the death penalty. In this sense, hypocrisy and spiritual abuse are not foreign to the Christian story, they're part of the story.

There's still more. History offers painful examples in which those in positions of Christian authority have not only failed morally, but have actively contributed to suffering—most recently in the clergy sexual abuse scandals in which leaders protected institutions rather than vulnerable people. This reality casts a long and understandable shadow over how God and His intentions are perceived.

My response is not to excuse these failures, but to humbly redirect attention to Jesus of Nazareth Himself. If His life and character represent what a true image bearer looks like, then the question is not whether Christians have lived up to that standard, but whether the love He embodied is compelling—and worth considering on its own terms.

- As we learn to follow God's direction, we'll experience a full, abundant life.¹¹⁷ I believe this happens, in part, because we're directed to live in harmony with our natural gifting. Globally, this results in the KoG having redeemed citizens in all walks of life, spreading loving behavior and the news of redemption throughout the world. Thus, all redeemed-humans' work becomes God's work, regardless of our fields of endeavor.
- As we learn to follow God's direction and become good image bearers, our lives will begin to imitate the way Jesus lived, in accordance with the Love Precepts.¹¹⁸ This leads to serving others.¹¹⁹ Conversely, the practices of our pre-redeemed life—hatred, discord, jealousy, envy, sexual immorality, fits of rage and selfish ambition, to name a few¹²⁰—fade away.

- As we learn to follow God’s direction, our life will become characterized by love, joy, peace, patience, kindness, goodness, faithfulness, gentleness, and self-control.¹²¹
- As we ask God, He gives wisdom and guidance to use each day.¹²²
- We can expect persecution for our new beliefs.¹²³ Depending on the culture in which one lives, this could be minimal (e.g., being teased for “irrational” beliefs) or severe (e.g., being ostracized from your family or even martyrdom).
- We can expect to have our new beliefs tested. Scripture tells us that the purpose of such testing is to develop perseverance and maturity in our lives.¹²⁴ Some preachers describe redemption as a means to “*health and wealth*” during our lifetime on earth; however, Scripture does not teach this—it’s a false expectation.

Redemption transforms and restores, but does not override freedom. Love invites allegiance, but does not compel it. The same freedom that allows partnership with God also allows its refusal.

Interlude

For much of my life, I thought of the doctrines discussed thus far as isolated components—each individually defensible, but not obviously connected. Only when I began tracing them back to a single foundational premise—that God is love—did an architecture begin to cohere.

For years I’d heard Christians say, “*Christianity is not a religion; it’s a relationship.*” To me, it felt like a hollow cliché—something often said without meaningful clarification. Looking back, that reaction makes sense. I’m a fairly typical geeky engineer. It’s sometimes easier for me to remember numbers and equations more easily than people I’ve known. I’ve been in many conversations where the long, awkward silence appears because I couldn’t think of another topic to bridge the discussion. So it feels a bit strange writing an essay about relationships—it’s never been my forte. On the other hand, recognizing logical patterns and developing a coherent architecture has fascinated me for a long time.

As this essay took shape, I began to understand what that claim actually meant. The fog slowly lifted. What I had once assumed to be a collection of religious obligations revealed itself as something far more elemental and less complicated than I expected. At its core, the call of God’s love was not esoteric or ceremonial. It was disarmingly simple and could be explained in ordinary, everyday terms. And once that pattern became visible, one of the most difficult questions in the entire architecture could no longer be avoided.

Love and the Reality of Hell

When the subject of hell arises, many instinctively respond, *“I’m a good person—I know I’ve made mistakes, but none that rise to that severity.”* Hell feels harsh, even unjust. Yet beneath that confidence, there is often an uneasiness. We know our selfishness, our pride, our divided loyalties. We sense that something in us is off. The tension is real: we desire mercy, yet resist the idea that we might be accountable.

Scripture reframes the issue in a way that differs from popular imagination. The question is not whether someone has committed enough sins to cross an invisible threshold.¹²⁵ Nor is hell reserved for particular categories of wrongdoing. Sin is universal. The issue is deeper and relational: whether one has entered into genuine partnership with God—whether one has given Him ultimate loyalty. Here’s the sobering truth in Jesus’ words ([Matthew 7:21-23, NIV](#)):

“Not everyone who says to me, ‘Lord, Lord,’ will enter the kingdom of heaven, but only the one who does the will of my Father who is in heaven...Then I will tell them plainly, ‘I never knew you. Away from me, you evildoers!’”

When Jesus says, *“I never knew you,”* He’s not speaking of intellectual awareness, but of relationship—the kind of knowing that entails intimacy and loyalty—a relationship similar to that of a lifelong friend or spouse.

When Jesus spoke of hell, He used the Greek term, Gehenna, referring to the Valley of Hinnom outside Jerusalem. In Israel’s history, the Valley of Hinnom was a place associated with idolatry, child sacrifice, and ritual uncleanness. It was a place of rejection and a symbol of exclusion from the holy city.

God’s invitation to redemption is an act of love, but love that must be freely received. Those who reject it choose separation from the only source of true goodness and life. Hell, therefore, is not a cruel imposition—it is the natural outcome of refusing God’s love.¹²⁶ Typically, the trajectory of a human heart does not remain neutral. Over time, what we repeatedly choose becomes what we desire—and what we desire becomes who we are.

In his book, *Hell, the Logic of Damnation*,¹²⁷ contemporary philosopher of religion Jerry L. Walls writes, *“Of course, the greatest loss of those in hell is that of knowing God and enjoying life with him in heaven. This is the true end for which we were created, and the ultimate tragedy of hell is that some will lose out on the joy of eternal fellowship with God.”*

Many people who reject the Remedy imagine hell as an underground torture chamber,¹²⁸ and then understandably proceed to wonder how a loving God could eternally consign anyone there. Joshua

Ryan Butler in his book, *The Skeletons in God's Closet*,¹²⁹ spends a great deal of text unwinding this caricature of hell.

One of his main points is that hell functions as the final protection of the redeemed. It's the final separation of evil from good—so that unredeemed humans and dark spiritual beings can no longer harm or influence the redeemed. Unlike the Garden of Eden, no evil will ever be allowed in the new heavens and earth. This is God's loving protection of His family, forever.

Scripture teaches that hell is not temporary. This permanence is what makes the doctrine so weighty. Jesus Himself speaks of those who reject God going away to “eternal punishment,” just as the redeemed enter “eternal life,” placing both destinies on equivalent timescales.¹³⁰ Many people—including theologians—find this deeply troubling, myself as well. It's difficult to imagine how *eternal* separation is proportional to the finite sins of a human life, no matter how horrific those sins might be. Of all the doctrines of Christianity, this is one many wish was different—that some further reconciliation might yet await those who reject the Remedy. However, Scripture does not teach that we're given a second chance after our life on earth has ended.¹³¹

In a way, this makes sense because love cannot be coerced. If someone has spent a lifetime resisting God, it's hard to see how shifting that person into heaven (the new earth) and into permanent [compelled?] allegiance to God would be loving. One may hypothetically argue that after spending time in hell, some people would change their minds. Yet experience suggests that suffering often hardens rather than transforms. When the human heart hardens against love, prolonged resistance often deepens resentment rather than dissolving it. Hell, in this light, is not God forcing rejection, but God finally honoring it.

Hell is often described using vivid imagery—most famously as a “lake of fire”—which has led many to imagine it primarily in terms of physical torture. Yet Scripture also speaks of hell as a place of darkness, indicating that this language is metaphorical rather than literal. Jesus' own words emphasize torment in the sense of inner anguish, remorse, and separation, rather than suffering imposed through external instruments.¹³² For this reason, many theologians describe hell not as a torture chamber, but as a state of eternal, conscious torment.

Hell is often described in Scripture as “God's wrath” upon the unredeemed. Because eternal separation from God—the source of all life, goodness, and meaning—has such devastating consequences, Scripture describes that condition as wrath. This can be confusing, because normally we think of wrath as anger expressed through punishment; where human wrath is involved, we often imagine torture or destruction. In his book, *Hell, the Logic of Damnation*, Walls continues: “*The suffering of hell is the natural consequence of living a life of sin rather than arbitrarily chosen punishment. In other words, the misery of hell is not so much a penalty imposed by God to make the sinner pay for his sin, as it is the necessary outcome of living a sinful life.*” Walls goes on to quote Peter Geach, a twentieth-century analytic philosopher of religion: “*God is the only possible source of beauty and joy and knowledge and love: to turn away from God's light is to choose darkness, hatred, and misery. God is not like a jealous parent resenting his children's seeking happiness outside the home; apart from love for God men can find only misery, in this world or in any conceivable world; and God could not make men so that they did not need Him* [emphasis mine].”

Because God is the source of all goodness, *this withdrawal is not mild—it's devastating* in ways we can scarcely imagine. The following paragraphs are an attempt to picture the desolation of hell as life apart from God.

In our present lives in a world marked by rebellion, we continue to live sustained by a kindness that is not our own. We experience the steady comfort of a spouse who knows us fully and remains. We feel the loyalty of a lifelong friend who answers the late-night call. We remember the embrace of a parent, the laughter of a sibling, the quiet strength of someone who says, “I’m here.” We’re quietly upheld by acts of loving service—the nurse who keeps watch through the night, the neighbor who brings a meal, the stranger who stops to help. These moments do more than comfort us. They keep despair from swallowing us whole.

Yet none of these loves originate within us. They’re reflections—fragile, partial, but real—of the One who is love itself. Even those who deny Him still wake each morning with breath in their lungs, are met with patience when they fail, and are helped by people who expect no repayment. Conscience still restrains cruelty. Loving service still interrupts selfishness. Beauty still breaks through despair. Hope still whispers that change is possible. Scripture teaches that every good gift comes from above, and that love itself is from God. If that is true, then even the genuine affections and acts of service of those who don’t acknowledge Him ultimately depend upon His sustaining kindness.¹³³

If God is truly the wellspring of every good thing¹³⁴—every impulse toward mercy, every capacity for trust, every tenderness that binds one heart to another—then separation from His favorable presence would mean more than loneliness. It would mean the loss of the very conditions that make love, comfort, and hope possible. Remove gravity and the planets scatter. Remove oxygen and life suffocates. Remove the sustaining warmth of God’s gracious presence,¹³⁵ and what remains is not neutral existence, but relational collapse—a reality in which love no longer softens pride, mercy no longer tempers justice, and the soul turns inward without relief.

Consider the most stabilizing love you have ever known. The person whose presence calms your anxiety. The one who forgave you when you didn’t deserve it. The voice that reminded you that you weren’t alone. Now imagine not only losing that person, but losing the very possibility that such love could ever arise again—no reconciliation, no tenderness, no relief, no hope of change. If God is the source of every such mercy, then to be finally separated from the blessing of His presence is to step into a reality where those mercies no longer flow.

Not only this, but C. S. Lewis in his book, *The Great Divorce*,¹³⁶ describes hell as solitary. He puts it this way: *“The trouble about the place [hell] is that it’s so empty. That’s what makes it so hopeless. It seems the deuce of a town at first, but it soon gets worse. That’s what brings us to live so far apart. As soon as anyone arrives, he settles down in some street. Before he’s been there twenty-four hours, he quarrels with his neighbor. Before the week is over, he’s quarreled so badly that he moves.”* Eventually, everyone ends up being alone.

Scripture speaks of differing degrees of judgment in hell because people do not reject God to the same extent, nor with the same knowledge or moral deformation.¹³⁷ All who persistently refuse God experience the same kind of consequence—exclusion from His presence—but the depth of that loss varies according to how profoundly a person has disordered their loves and resisted the light they were given.

Scripture is sober about this one final reality: our lives are not rehearsals. We are given one earthly life in which to respond to God’s invitation. After that, the direction we have chosen is final. Love remains freely offered—but not indefinitely deferred.

But if the invitation is so consequential, why doesn’t God overwhelm all doubt and compel belief? The answer leads directly into the role of faith.

Part II: The Role of Faith

Throughout this essay, we have explored a vision of reality grounded in a God whose nature is love. We have considered creation, freedom, deception, redemption, and the ultimate invitation into relationship with God. Yet important questions remain: *If God desires a loving relationship with humanity, why does that relationship require faith? Why is God's existence not made overwhelmingly obvious? Why does reality permit doubt, disagreement, and competing interpretations?* These questions lead us to one of the most important and often misunderstood concepts in Christianity—*faith*. Faith is not a religious requirement imposed by God, nor is it belief without evidence. Rather, faith is woven into the very structure of human existence and relationship. In this part, we'll examine the nature of faith, why it is necessary, how it relates to freedom and love, and what role it plays in humanity's search for truth and relationship with God.

Faith, the Final Frontier

Faith Defined

Scripture provides a working definition of faith in [Hebrews 11:1 \(NIV\)](#):

“Now faith is confidence in what we hope for and assurance about what we do not see.”

Faith is portrayed as confidence and assurance, not absolute proof; it allows room for questions and doubt. Nevertheless, faith conveys the idea of trust—leaning on something so fully that if it were to fail, you'd fall.

There's another important aspect of faith, *fidelity*—faithfulness, loyalty, or steadfast adherence to a person, commitment, duty, or standard. This sense of faith is often used in Scripture as well.¹³⁸ We're quite unlikely to have fidelity in someone or something in which we have no trust. Thus it makes sense that Scripture often expresses these two aspects through the same word. In Part II of this essay, the word faith will normally mean trust rather than fidelity. Also note that while the word *faith* is colloquially used to refer to religious belief, that's not the sense in which it's used here.

Finally, a further clarification to our definition of faith is crucial. Michael Guillen, physicist, author, and former science editor for ABC News—clarifies the meaning of faith by dividing it into two classes: *misguided faith* and *enlightened faith*.¹³⁹ *Misguided faith* is a belief in known fantasies or hypotheses which can be categorically discredited; *enlightened faith* is a belief in hypotheses consistent with available evidence, even when certainty remains incomplete or unattainable. Popular dialog often ignores this critical difference. In Part II, the word faith conveys the meaning of *enlightened faith*.

Faith and Interpretive Freedom

Scripture declares that it's by faith that we understand God is creator of the universe, [Hebrews 11:3 \(NIV\)](#):

“By faith we understand that the universe was formed at God’s command, so that what is seen was not made out of what was visible.”

This verse can be interpreted in two ways. The first and most natural interpretation is that we apprehend by faith that God is creator. How might one apprehend this? By observation. Some examples:

- The night sky evokes awe and wonder. Across the centuries, observers mapped the constellations, traced their movements, and recognized a remarkable order and regularity usable for marking the passage of time.
- Beauty in nature stirs a sense of awe in reality: sunsets, mountain ranges, oceans, forests, flowers, birdsong, and the intricate patterns of living things often evoke wonder, delight, and even transcendence. The natural world appears filled with forms of beauty that seem to reach beyond mere survival or utility.

However, there’s a second interpretation that suggests something deeper—that one can apprehend God as creator *solely* by faith, because absolute proof or assurance will *never* be available. If this is the case, then God has created the universe in a manner that preserves interpretive freedom rather than offering coercive certainty. Why? If relationship rooted in love requires freedom, and if coercive certainty would compromise interpretive freedom, then a partially veiled creation becomes philosophically coherent. In other words, this Scripture suggests that God has designed the universe such that reasonable, intelligent persons can attribute its creation to other phenomenon or forces. For example, the “Many Worlds” or “Multiverse” hypothesis. Not that God designed deception into His creation or caused these other hypotheses to arise, but He foreknew humanity would propose them. This is analogous to the presence of evil. God allowed the freedom which admitted the possibility of evil; he foreknew humanity would commit evil, but He didn’t create evil nor did He coerce humanity’s choices.

The fact that we apprehend God as creator of the universe through faith dovetails nicely with the definition of faith. When we add up all the evidence, we have assurance. However, it’s not absolute proof. Moreover, intelligent people can and do believe in alternative explanations. This leads to the following progression of thought:

- God is Love.
- Love does not coerce.
- God’s self-revelation does not coerce belief. Specifically, God’s creation does not coerce humans to believe He’s creator.
- Therefore, including the concept of God’s [hiddenness](#), we find ourselves possessing only partial knowledge of God.
- Therefore, faith (trust) is a necessary prerequisite for a relationship with God.

This logic implies that *faith is fundamental to love-based relationships*.

Developing Trust

How can we know that someone truly loves us? This is a crucial question to ask, particularly if that “someone” is a key person in our life—a spouse, parent or good friend. You might say, “*I just know.*” But if we stop and think about *how* we know, it’s a bit more nuanced.

In this essay, we’ve defined agape love as the passionate commitment to the well-being of another. For a key person in our life, that definition might be *care and concern exhibited through loving behavior over an extended timeframe*. Notice that “care and concern” is a mental attitude, something not externally observable—at least by humans. Many different attitudes could evoke the same, seemingly loving behavior. For example, if someone close to you gives you a gift, the outward behavior may appear loving, yet the underlying motivation could arise from several different internal attitudes:

- They like how giving gifts makes them feel.
- They like how they feel when they’re around you (“*I like me better when I’m with you*”).¹⁴⁰ When they give you a gift, you’re more likely to spend time with them.
- They feel gratitude or appreciation toward you and want to express it tangibly.
- They want you to do something for them. Giving you a gift may cause you to feel indebted and more likely to agree to their request.
- They’re a charismatic person, doing it for “show.”
- Gift giving is part of their personality, family tradition, or cultural upbringing—they naturally express affection or social connection through giving.

Here’s the thing, they tell you they love you, but do you *trust* their word—do you have *faith* in them? And if this person were someone seeking a long-term commitment, would you stake your future on it?

In this sense, faith is a synonym for *trust*. So the question becomes, how do we know we trust someone? Trust comes by observing the long-term behavior of the one being trusted. Brené Brown, research professor and bestselling author provided a great illustration about trust.¹⁴¹ Brown built this illustration off a marble jar analogy used in her daughter’s classroom at school. In the classroom, the marble jar was used to reward classroom behavior. When students exhibited good behavior, marbles were added to the jar; when poor behavior was exhibited, marbles were removed. When the jar became full, the teacher held a class-wide celebration for all to enjoy. Brown’s illustration of trust worked similarly. Brown explained that when someone does a little thing for you that builds trust, we put a marble in their marble jar. For example, a friend keeping promises, being kind, not

sharing secrets, and showing up consistently. When the jar gets full enough, they've become a trustworthy person.

This analogy works in adult life as well. If the marble jar gets really full, we might trust our lives to someone (e.g., a fellow police officer), our finances (e.g., a business partner) or something else so big, if they were to betray our trust, it would devastate us. Once someone is trustworthy, we believe what they say—by faith. It's not blind faith, it's faith based on the evidence of a track record—what they've said and done in the past.

So it is with God. He asks us to trust our life to Him. But how do we experience God such that we can put marbles in His jar?

The Possibility of Absolute Proof

Is there the possibility of absolute proof when it comes to reality? Many objections to faith assume certainty is possible. Probably the closest we can come to absolute proof is a mathematical proof. Remember back to High School geometry class and the agony associated with learning to prove theorems? Concepts were logically built up step-by-step until the theorem was proven.¹⁴²

Something like this:

1. For a valid proof to exist, every statement made must have a supporting reason (e.g., another theorem).
2. But when a supporting reason is given, that reason itself becomes another statement requiring support.
3. You can see where this is going. It creates an infinite regress problem unless, at some point, there is a stopping place.

That stopping place is an *axiom* or set of axioms. An axiom is a foundational statement accepted *without proof* within the system itself. Once the axioms are accepted, conclusions can be logically derived from them.

This is important because even mathematics—the discipline most associated with certainty—ultimately rests on unproven starting points. The term, “unproven,” refers to absolute proof; it does not imply that such starting points are unfounded or unreasonable. Generally, they are carefully chosen, internally consistent, and have withstood centuries of scrutiny without revealing contradictions or counterexamples. Nevertheless, they haven't been proven absolutely. Mathematical proofs are absolute only relative to the axioms upon which they're built.

Without foundational assumptions, reasoning cannot even begin.

The same is true more broadly of human reasoning and worldviews. Every worldview begins with foundational assumptions (axioms) about reality. Some people consciously examine those assumptions; others simply inherit them from parents, teachers, professors, or culture.

Here are a few examples of philosophically-foundational axioms some people may hold:

1. Human reason and perception are sufficiently reliable to understand reality. This assumption underlies science, philosophy, and rational discourse itself. If our cognitive faculties cannot generally apprehend reality truthfully, then confidence in human reasoning begins to erode. Is this axiom provable?

2. The laws of physics are sufficiently uniform and stable throughout the universe and across time for scientific reasoning to work. This assumption underlies much of modern science and affects how we think about the cosmos and its history.
3. There is only a material, physical realm. If so, there is no such thing as a non-physical reality. This assumption may affect one's views on consciousness, morality, theology, or the possibility of spiritual beings.
4. The physical universe is a closed system that cannot be interrupted by any external agency. If so, miracles are impossible by definition. This would affect how one interprets claims such as Jesus walking on water or His resurrection.
5. Human life has value. Modern culture strongly assumes that human beings possess intrinsic worth. The United States Declaration of Independence famously states, "*We hold these truths to be **self-evident**, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights...*" This underlies medicine, law, democracy, human rights, and humanitarianism. Science can describe human biology without ever yielding the conclusion, "therefore humans *ought* to be valued." The "ought" is philosophical. Are human rights truly *self-evident* and *unalienable*?
6. Moral truths are real. Even people who deny objective morality still act as though some things are truly wrong: torture, betrayal, abuse, genocide, exploitation, etc. Modern societies often assume concepts like human rights, dignity, fairness, and equality have real moral force.

One interesting observation is that people often criticize religious belief for resting on faith or assumptions, while overlooking how deeply assumptions are woven into everyday life, human reasoning, and even our most trusted intellectual frameworks. The difference is not whether axioms exist, but which axioms are chosen and whether they're acknowledged.

Faith, then, is not the opposite of reason. In many ways, it operates at the foundation of reasoning itself.

Kurt Gödel was an Austrian logician and mathematician, and later a professor at the Institute for Advanced Study at Princeton University, whose incompleteness theorems profoundly influenced mathematics and philosophy; he was also a contemporary and close friend of Albert Einstein. His work proved that in any consistent formal system rich enough for arithmetic, some true statements cannot be proven within the system itself. This result has reshaped twentieth-century thought about certainty and proof.

Gödel's Incompleteness Theorem has profound implications for mathematics and philosophy. It means that even in mathematics—the discipline most associated with certainty—there are limits to what can be formally proven from within a system. Some truths transcend the proving power of the axioms themselves. This is astounding because it reveals that absolute certainty has boundaries even in the most rigorous domains of human reasoning. Truth and proof are not always identical concepts.

The implications extend beyond mathematics. Some beliefs may be strongly supported by evidence, coherence, experience, explanatory power, or repeated observation and yet remain beyond the reach of absolute proof. Not all things that are true are provable. Sit with that thought for a moment.

This realization invites intellectual humility. It reminds us that certainty is not the only basis upon which rational people form convictions.

Faith, therefore, can be understood as trust grounded in sufficient reasons even when absolute certainty is unavailable or unattainable.

Believing is Seeing

The expression is really, of course, *Seeing is Believing*. But have we got it right? Michael Guillen,¹⁴³—contends we have it backwards. Guillen writes, “*Faith dictates how you see, think about, and relate to everything within and beyond the universe. Everything. In other words, believing is seeing.*” Why does Guillen say this? Because we reason from axioms. Guillen goes on to say ...

What you believe dictates how you see life, others, and the world around you. Believing is seeing. How you see things, in turn, dictates how you react to circumstances, to crises, to everything. Seeing is reacting.

“Unless you’re willing to believe that something might be true, you’ll never bother to investigate and see for yourself whether it is true (or not). You’ll remain in a state of confident ignorance.”

What role should faith play when knowledge is incomplete? We often encounter realities that cannot be directly observed, fully understood, easily explained, or intuitively grasped. Yet we don’t necessarily reject such realities. Instead, we weigh the available evidence and decide whether it is sufficient to warrant trust. The following questions illustrate how this process occurs even within the sciences.

- **Observation—must we observe something before believing it?** Cosmologists know there is a “missing mass problem” in the universe because galaxies are observed to rotate faster than they “should”. Dark matter has been postulated as the cause of this anomaly. Another phenomenon, Dark Energy, has been proposed to cause the repulsive force driving expansion of the universe. Together, Dark Matter and Dark Energy are thought to comprise 95% of the entire universe; neither have been detected. Guillen writes,¹⁴⁴ “... *science had discovered that what we are able to ‘see’—what we’re able to prove the existence of—is only a small fraction of what’s out there. The missing-mass problem made me realize that if I insisted that ‘seeing is believing’—then I’d be turning a blind eye to 95% of what’s out there in the universe.*”
- **Understanding—must we fully understand something before believing it?** Human beings routinely rely upon realities that we can describe, model, and use successfully without fully understanding why they behave as they do. Scientific theories often provide extraordinarily accurate predictions, yet the deeper reasons behind those predictions remain elusive. Understanding enough to use something is not the same as fully understanding it.
 - Physicists know from Einstein’s theory of special relativity that time slows down for objects moving at very high speeds; if it were possible to reach the speed of light, time would stop. The mathematics describing this effect has been confirmed repeatedly through observation and experiment. Yet many people still struggle to understand why motion should affect the passage of time at all. In a different domain, Scripture says that God is light, that He exists outside of time and knows the past, present, and future—as if He can observe the history of humanity from beyond time itself.

- Human consciousness is perhaps even more mysterious. Each of us experiences thoughts, emotions, self-awareness, and subjective perception directly. Yet despite tremendous advances in neuroscience, no consensus explanation exists for how conscious experience arises from physical matter. Consciousness is one of the most familiar realities in our lives, yet one of the least understood.
- **Expectations—must reality conform to our expectations before believing it?** Human beings naturally develop expectations about how reality ought to work. Causes should precede effects. Objects should possess definite properties independent of observation. Information should not travel faster than the speed of light. Yet modern physics has repeatedly revealed phenomena that challenge such assumptions. These effects are not speculative philosophy; they are experimentally observed realities described with extraordinary mathematical precision. Reality, it seems, is under no obligation to conform to our expectations.
 - Scientists have observed the mysterious behavior of quantum entanglement about which Guillen writes, *“Measuring the spin of one electron instantaneously affects the spin of the other—as if the two electrons are in telepathic communication. ... In one recent study, scientists at the University of Science and Technology of China in Hefei found that twin light quanta separated by a record 746 miles still seemed able to communicate with each other instantaneously.”* How does this effect propagate faster than the speed of light, the universal “speed limit”?
 - Scientists have observed the quantum measurement problem about which Guillen writes, *“According to quantum physics, an electron behaves like a wave of probability. It is simultaneously spinning clockwise and counterclockwise. However ... the instant you open the box, the instant you interact with the electron, you cause one of the possibilities to be fully realized. The electron you observe will be spinning in only one direction—either clockwise or counterclockwise—and no longer both. Thus, you are not an objective observer. You are not merely observing some preordained reality. You are unavoidably helping to determine the outcome. You. ... It’s an absolute truth, then, that no matter how carefully or honestly you do an experiment, its results will always be tainted by your involvement in it. ... ‘How do you go from the fuzzy, hazy reality of quantum probabilities, where things can be in many locations with different likelihoods, to the single, definite reality we observe when we do a measurement?’ asks Columbia University physicist Brian Greene. Answer? ‘We don’t know.’”* If this weren’t enough, Guillen also writes, *“The Universe could only come into existence if someone observed it,” says Sir Martin Rees. ‘The Universe exists because we are aware that it exists.’”* Why should observation have any effect on quantum states of particles?
- **Intuition—must reality conform to ordinary human intuition before believing it?** Some aspects of modern physics appear so far removed from everyday human experience that they resist ordinary visualization and intuition. These realities can often be described mathematically with extraordinary precision, yet the underlying concepts remain difficult to mentally picture or fully comprehend. In some cases, reality itself appears

fundamentally different from the way human beings naturally imagine the world to operate.

- We know from cosmology that the universe is expanding, yet not in the ordinary sense of objects moving outward into pre-existing empty space. Rather, space itself appears to expand, increasing the distance between galaxies over time. Modern cosmology models this expansion mathematically with remarkable accuracy, yet the underlying reality remains conceptually difficult to grasp. If space itself expands, what exactly is expanding, and what does it mean for space to grow without expanding into some larger container? Is there a larger container and, if so, what is it?
- Scientists have long known that light behaves both like a wave and like a particle, despite those categories seeming mutually exclusive in ordinary experience. In a different domain, Christianity presents another profound mystery: Jesus of Nazareth is understood to be both fully human and fully divine. Both claims challenge the limits of ordinary human understanding.
- **Openness—must we reject realities that remain unexplained?** Despite extraordinary scientific progress, many fundamental questions remain unresolved. Why does consciousness exist? Why do the laws of nature have the form they do? Why is mathematics so effective at describing reality? How did biological information originate? Why does anything exist at all? These questions do not prove any particular worldview, but they remind us that reality is deeper than our present understanding. Intellectual humility suggests that unexplained phenomena should invite further investigation rather than premature dismissal.

None of these examples proves the existence of God, the reality of a spiritual realm, or the truth of Christianity. They do, however, illustrate a recurring lesson from human inquiry: reality often proves more complex, surprising, and difficult to understand than we initially imagine. Scientific progress has repeatedly revealed truths that would once have seemed impossible, irrational, or contrary to common sense. For that reason, theological claims should not be dismissed merely because they transcend ordinary experience or challenge our intuitions about how reality ought to work.

At the same time, these examples reveal another important principle. Human beings routinely rely upon realities that they do not fully understand. Scientists and engineers often employ mathematical models that describe nature with extraordinary accuracy while acknowledging that the deeper reasons behind those models remain only partially understood. Complete understanding is rarely a prerequisite for accepting that something is true. More often, trust develops as evidence accumulates and a pattern of reliability emerges.

In this sense, faith is often the response to knowledge that remains incomplete. We frequently move forward on the basis of well-supported truths before we fully comprehend them. If reality contains dimensions beyond the material world, we should expect some aspects of that reality to be difficult to observe, explain, or fully understand. Intellectual humility therefore counsels neither blind acceptance nor premature dismissal, but rather an openness to follow the evidence wherever it leads.

The Interpretive Frontier

Our *worldview* is fundamental to the way we live our lives. Our worldview is the foundational framework of beliefs and assumptions through which we interpret reality, meaning, morality, and our existence. Regarding worldview, Guillen writes: ¹⁴⁵

“Even if your worldview is evidence-based, to use a popular buzzword, it is founded on axiomatic beliefs you can’t prove, see, or even fully imagine. Your worldview, therefore, even if it is atheistic, is faith based.”

If we have a poor worldview, it could impose rough consequences when we encounter a so-called “Titanic Moment” in our lives. In *Believing is Seeing*, Guillen writes:¹⁴⁶

“The engineers who designed the Titanic believed she was unsinkable. That belief defined their reality; consequently, they saw no need to stock the ship with lots of life vests and lifeboats. And they reacted accordingly. If they hadn’t believed the Titanic was unsinkable, it would’ve been a totally different story. Their misguided worldview contributed to the deaths of more than fifteen hundred people.

The passengers on the Titanic’s maiden voyage also believed the ship was unsinkable. Consequently, they saw no great risk in voyaging across the North Atlantic through the area known as Iceberg Alley. And they reacted by shelling out big bucks for the privilege. ...

Believing is seeing. Seeing is reacting.

If your reality is seriously at odds with absolute reality, when a Titanic Moment strikes, your worldview will sink your ship. Maybe you’ve gotten away with having a misguided worldview for years; but when disaster hits, your make-believe reality will blow up in your face.”

The Frontier of Faith

Belief shapes perception. The fundamental tenets of our worldview—which ultimately govern our choices, relationships, and understanding of reality—rest upon beliefs that cannot themselves be exhaustively proven from within our worldview’s frameworks. This is one reason the section is entitled *Faith, the Final Frontier*.¹⁴⁷

Faith is foundational to human life. The *Frontier of Faith* is the boundary beyond which evidence can inform but no longer compel, requiring a person to decide whom or what they will ultimately trust.

Every worldview eventually reaches this frontier. This is not unique to religion. Scientists trust that the universe is intelligible and governed by consistent laws. Rational inquiry depends upon confidence that our minds are capable of apprehending truth. In everyday life, we trust memory, perception, testimony, and the existence of other conscious minds. These assumptions are so deeply embedded in human experience that we rarely notice them, yet without them coherent thought and meaningful relationships would be impossible.

The frontier is not the point at which evidence ends; it is the point at which evidence alone can no longer determine which interpretation of reality one ought to embrace.

Belief also shapes action. We go to college because we believe we can learn; we do research because we believe truth can be discovered; we start businesses because we believe success is possible. In engineering, problems can appear impossible when we believe no solution exists. Yet once we learn that another person or company has solved the problem, our posture changes. We begin exploring new approaches, finding paths forward, and before long, solutions emerge. What we believe profoundly influences what we attempt, how we persevere, and even what possibilities we are able to perceive.

At the personal level, relationships themselves require faith. We trust that another person's love, loyalty, and intentions are genuine even though they cannot be proven. A marriage, friendship, or partnership cannot survive by forensic verification alone. At some point, trust becomes necessary. *Faith, then, is woven into the fabric of human relational life itself.*

Christian faith—*enlightened faith*—operates within this broader human reality. The claim of Christianity is not that we should believe without evidence, but that evidence alone cannot *compel* love, trust, loyalty, or surrender. If God desires genuine relationship rather than coercion, then reality would be expected to preserve interpretive freedom—the ability to trust, reject, follow, ignore, or rebel.

At the same time, reality confronts us with [foundational questions](#) that remain profoundly difficult to fully explain: consciousness, morality, rationality, beauty, meaning, personhood, the existence of the universe itself, the fine-tuning of physical reality, and the origin of biological information. Every worldview must somehow account for these features of existence.

The question, then, is not whether humans live by faith. We do. The deeper question is which vision of reality best explains the world we inhabit, whether the object of our faith is trustworthy, and whether we're humble enough to follow truth wherever it leads.¹⁴⁸

Taken together, the ideas explored in this section suggest a broader pattern regarding faith, trust, and how human beings come to know reality (epistemology). The following table summarizes these key observations.

Table 10: Summary: The Elements of Faith

Faith is best understood as trust, not blind belief. Scripture portrays faith as confidence, assurance, fidelity, and relational trust. Faith is not opposed to reason. Faith operates where meaningful evidence exists without the need for absolute certainty.

Absolute proof is elusive in both reason and life. Even mathematics and logic depend upon foundational assumptions that cannot themselves be fully proven. Human reasoning therefore rests upon evidence, inference, and trust.

We live by faith in everyday life and relationships. Humans routinely trust memory, perception, motives, promises, and the character of other people. Relationships cannot function on absolute proof alone. Trust develops through a track record of evidence and experience.

We live by faith at the worldview level. Naturalism, rationalism, empiricism, and theism all begin from foundational commitments that shape how reality is interpreted. We all live by faith. The deeper question is where we should place that faith.

Modern physics shows that reality transcends ordinary human intuition. Relativity, quantum behavior, dark matter, dark energy, and expanding space challenge our understanding of reality. Many scientifically accepted ideas cannot be directly observed and remain difficult to conceptualize intuitively. People routinely accept realities that appear strange, invisible, or counterintuitive when the evidence supporting them is compelling.

The Frontier of Faith. The Frontier of Faith is the boundary beyond which evidence can inform but no longer compel, requiring a person to decide whom or what they will ultimately trust.

Therefore we should approach the world with intellectual humility and openness. Since all people live by foundational trust commitments, faith itself should not be dismissed as irrational. Since reality already contains truths beyond ordinary intuition—apprehended by faith—shouldn't divine revelation be granted the same allowance?

A common thread runs through all of these examples. Human beings often possess sufficient reasons to trust something long before they possess a complete understanding of it. Faith frequently operates in a similar manner. We move forward on the basis of knowledge that is real but incomplete, trusting what we have good reason to believe while continuing to seek deeper understanding. If this principle is accepted in science, engineering, and everyday life, it should not be surprising to find it operating in questions of ultimate reality as well. Indeed, if reality includes dimensions beyond the material world, we should expect some aspects of that reality to be difficult to observe, explain, or fully comprehend.

[← Previous](#) [ToC](#) [Next →](#)

The Necessity of Faith

The Structure of Faith

Faith is woven into the very architecture of human relationships. Relationships don't operate through absolute proof, coercion, or exhaustive certainty, they require trust. A child trusts a parent's care long before fully understanding it. Friends trust one another's loyalty without proof. Spouses entrust themselves to one another through promises whose future fulfillment cannot be guaranteed in advance. Relationship requires a willingness to move beyond detached observation into personal trust.

This principle appears deeply embedded within reality itself.

- **Freedom creates moral openness.** We can choose love, selfishness, honesty, deception, courage, or cruelty.
- **Moral openness produces relational openness.** If humans are truly free, then relationships cannot be mechanically guaranteed. Love must remain voluntary rather than compelled.
- **Relational openness produces epistemic openness.** If God desires freely chosen relationship, then His self-revelation must remain sufficient for recognition while still leaving room for rejection. Human beings must be free to choose *and* to interpret, accept, or reject what they encounter. The conditions for knowing must remain open enough that trust is possible rather than compelled. *Epistemic openness* is defined as a state of reality that permits discovery while preserving interpretive freedom.
- **Epistemic openness invites seeking and discovery.** Rather than overwhelming human beings with irresistible certainty, reality appears structured to encourage inquiry, reflection, participation, and response. God's self-revelation invites response.
- **Discovery establishes the conditions for trust.** As persons seek, encounter, and accumulate understanding through experience, relationship, conscience, reason, and revelation, a basis for trust gradually emerges. Trust is not produced by absolute proof, but by meaningful evidence interpreted through relationship and experience.

This helps explain why God's self-revelation often appears non-coercive rather than overwhelming. The hiddenness of God is not merely about preserving human freedom in an abstract sense; it also preserves the possibility of trust. There's a profound difference between being forced into acknowledgment and willingly entrusting oneself to another. A prisoner may be compelled into outward compliance through irresistible power, but love cannot be extracted that way. Trust requires space for response.

At this point, one might object that trust exists in ordinary human relationships even when the other person's existence is certain. In other words, the necessity of faith cannot be explained solely by uncertainty regarding God's existence or love. However, human relationships and our relationship with God are not perfectly analogous. Relationships between human beings—especially peers—are relatively symmetrical. Each person is finite, each possesses only partial knowledge, and each encounters the other through ordinary sensory experience. Our relationship with God, by contrast, is profoundly asymmetrical. God is the Creator of all things, transcending the created order while remaining active within it. He knows us completely, while our knowledge of Him is necessarily partial. The question is therefore how finite creatures can come to know, trust, and love an infinite Creator without being compelled. Faith arises within that asymmetry.

Relationship requires trust, but healthy relationships also involve growth. A loving God who seeks relationship with His creatures does not leave them alone. He teaches, guides, warns, and sometimes disciplines. This raises an important question: if God's love is non-coercive, how can discipline be compatible with freedom?

Scripture portrays divine discipline primarily as relational formation. A loving parent, teacher, or coach does not cease to love by correcting destructive behavior; rather, correction can itself become an expression of care. The crucial distinction is that coercion seeks to overpower the will, whereas discipline seeks to form the person while preserving meaningful agency. Even under discipline, humans still retain the capacity to resist, repent, harden themselves, or learn.

The Scriptural concept of faith portrays it as fundamental to our relationship with God. Consider the Scripture in the table below. We come to God by faith, then as our relationship grows, so does our ability (wisdom) to respond to reality and relationship.

Table 11: Scripture's Portrait of Faith

[Hebrews 11:6 \(NIV\)](#), *"And without faith it is impossible to please God, because anyone who comes to him must believe that he exists and that he rewards those who earnestly seek him."*

[Proverbs 9:10 \(NIV\)](#), *"The fear of the Lord is the beginning of wisdom, and knowledge of the Holy One is understanding."*

Faith is not just the doorway into relationship with God; it is also the means by which the relationship is lived. As new circumstances arise throughout life, we continue to approach God in trust, seeking wisdom, guidance, and provision. Just as love requires ongoing trust between persons, partnership with God requires continual faith. We come to God by faith, and as we continue to trust Him, we grow in wisdom and understanding. Faith initiates relationship; wisdom helps us navigate that relationship and respond rightly to reality. In this sense, faith is not simply the beginning of the journey; it is the posture by which the journey is traveled.

In modern usage, the word "fear" often suggests terror or dread, but the Scriptural idea is closer to reverence, humility, and a proper recognition of reality. It begins with the acknowledgment that God is greater than ourselves and that our understanding is necessarily limited. Such humility creates epistemic openness—a posture of learning, correction, and discovery. Wisdom, therefore, is not merely the accumulation of knowledge; it begins with adopting the right posture toward truth

itself. By recognizing our dependence upon the One who created and sustains reality, we become better equipped to understand reality as it truly is.

Faith is also necessary because human beings are finite. We do not possess complete knowledge of reality, nor can we predict the future with any certainty. Every significant decision in life involves some degree of uncertainty. We choose careers, form friendships, marry, raise children, and make countless other decisions without knowing exactly how events will unfold. In this sense, faith is a fundamental feature of human existence. We continually act on the basis of incomplete knowledge, trusting that the future will prove our confidence well placed.

This limitation is not a defect in human design. Scripture portrays human beings as creatures who learn, mature, and grow over time. We all start life as infants, growing as children, teenagers and finally into adults. Wisdom is acquired gradually through experience, reflection, instruction, and relationship. We make mistakes and learn from them. We harm relationships and seek forgiveness. We gain understanding through successes and failures alike. The possibility of growth is inseparable from the reality that we do not begin life with complete knowledge or perfect wisdom.

Trust likewise develops over time. We rarely place deep confidence in another person immediately. Instead, trust grows as character is revealed through words, actions, and consistency over time. A track record is established. The same pattern appears throughout Scripture. God reveals Himself progressively through creation, conscience, history, Scripture, and personal experience. As His character becomes known, faith is strengthened. Faith is therefore not opposed to evidence or experience; it often emerges from them as relationship deepens.

As just mentioned, our relationship with God is fundamentally asymmetric. We trust amid uncertainty; God acts with complete knowledge. We walk by faith, while God sees the entirety of reality at once. Yet this asymmetry does not prevent genuine relationship. Scripture repeatedly portrays God entrusting responsibilities to human beings. He grants stewardship, vocation, authority, and meaningful choices. He calls people into partnership with purposes larger than themselves. Although God already knows the outcome, we do not. From our perspective, faith remains necessary as we learn to trust His character and follow His guidance through circumstances we cannot fully understand.

The logic developed thus far leads naturally to another question. If reality contains meaningful reasons to trust God, why is faith often resisted?

The Scriptural narrative suggests that the central obstacle is not necessarily intellectual uncertainty. From the beginning, humanity has faced a deeper question: whether we will trust God's wisdom or insist on determining reality for ourselves. The issue is whom we're willing to trust.

To understand the necessity of faith more fully, we must therefore examine one of faith's greatest obstacles.

The Choice Between Trust and Autonomy

The greatest obstacle to a faith-based relationship with God is not ignorance, it's pride. At its deepest level, pride is the elevation of self as the ultimate authority. It's the belief that one's own judgment is sufficient and that trust beyond oneself is unnecessary. More fundamentally, pride produces epistemic closure.

Table 12: Self-Reliance versus Faith

A Posture of Self-Reliance	A Posture of Faith
One relies primarily on one's own judgment.	One seeks wisdom beyond oneself.
One trusts one's understanding of what is good.	One recognizes that one's understanding is incomplete.
One determines what one will accept as true.	One remains open to discovering truths beyond current understanding.
One waits for complete certainty before commitment.	One has sufficient reason to trust even though understanding remains incomplete.

Scripture often identifies the first posture as pride—not necessarily arrogance, but the belief that one's own judgment is ultimately sufficient. Faith begins with a different posture: the recognition that reality may be larger than oneself and that trust may be warranted before complete understanding is attained.

Table 13: Pride versus Humility

Pride Path	Humility Path
Pride produces epistemic closure.	Humility produces epistemic openness.
Epistemic closure resists discovery.	Epistemic openness permits discovery.
Resistance to discovery inhibits trust.	Discovery enables trust.
Lack of trust prevents relationship.	Trust enables relationship.
Absence of relationship frustrates love's purpose.	Relationship fulfills love.

The tragedy of Eden was therefore deeper than disobedience alone. *The relational break was the disease; disobedience was one of its symptoms.*

The serpent's temptation was ultimately an invitation to autonomy: *"You do not need to trust God. You can determine reality for yourself."* Humanity's choice was not really about obedience or disobedience—it was between trust and self-sovereignty.

Table 14: The Fall and Redemption Viewed Through the Lens of Relationship

The Fall	Redemption
Humans ceased trusting God.	God reveals Himself in Jesus of Nazareth.

The Fall	Redemption	
They elevated their own judgment above His.	Discovery becomes possible.	
Pride produced epistemic closure.	Trust becomes possible.	
Epistemic closure prevented trust.	Relationship becomes possible.	
Loss of trust ruptured relationship.	Love becomes possible.	
The rupture manifested as disobedience.	Human flourishing becomes possible.	

Once faith and its primary obstacle are understood, several important implications follow:

- Faith is necessary.
- Faith can be misdirected.
- Therefore discernment matters.
- Therefore deception matters.
- Therefore we ought to understand evil.

The very conditions that make trust, freedom, and relationship possible also create the possibility of error, confusion, and false belief. Faith is therefore not only a matter of trust, but of learning to distinguish what is worthy of trust from what is not.

The Failure Modes of Faith

If reality is structured such that love, freedom, and trust are possible, then another implication follows naturally: faith can fail. The same openness that permits genuine trust also permits doubt, confusion, distortion, and misplaced allegiance. A world arranged for non-coercive relationship is not merely a world where faith is possible; it is also a world where faith can be resisted, redirected, or broken.

This helps explain why human experience often contains ambiguity. If God does not overwhelm human freedom through irresistible self-disclosure, then evidence will rarely function as compulsion. Reality may point toward meaning, purpose, morality, beauty, and transcendence, yet remain sufficiently open that alternative interpretations remain possible. Some see design; others see accident. Some perceive divine love; others perceive silence. The same openness that allows trust also allows uncertainty.

Yet the problem runs deeper than uncertainty alone. Humans do not merely struggle to trust; we often place trust in the wrong things. Scripture repeatedly describes this pattern as idolatry—in modern times, the elevation of finite things into ultimate things. Power, pleasure, status, ideology, wealth, nation, tribe, self, and even other people can become objects of misplaced trust. Humans are trust-oriented creatures; if trust is withdrawn from God, it does not disappear. It relocates.

Compounding this further is the reality that false signals exist within human experience. Love can be counterfeited. Authority can be abused. Communities can manipulate. Institutions can corrupt. People can invoke the language of truth while acting deceptively. Trust, because it is relationally

necessary, is also vulnerable. The very openness that allows authentic love also creates the possibility of betrayal.

This helps explain why disillusionment can become spiritually devastating. A person who has trusted deeply and experienced manipulation, hypocrisy, abandonment, or abuse may begin to question not just particular individuals or institutions, but trust itself. The collapse of confidence in one domain can spill outward into skepticism toward meaning, goodness, or even God. Wounded trust often reshapes the way reality itself is interpreted.

In this sense, the failure modes of faith are not peripheral to the human condition; they are woven into the same relational architecture that makes love possible in the first place. A world capable of genuine trust must also be a world where trust can be violated. The possibility of faith necessarily carries with it the possibility of deception, corruption, and alienation.

The possibility of doubt, deception, and misplaced trust can feel unsettling. If reality truly permits freedom, then it also permits the possibility of choosing poorly, interpreting incorrectly, or missing important signals altogether. Jesus alluded to this sobering reality when He spoke the following words as recorded in [Matthew 7:13-14 \(NIV\)](#):

“Enter through the narrow gate. For wide is the gate and broad is the road that leads to destruction, and many enter through it. But small is the gate and narrow the road that leads to life, and only a few find it.”

The implication is that while truth is accessible, finding and following it is neither automatic nor inevitable. Many signals compete for our attention. Many voices claim authority. The possibility for error is real. Jesus taught that few find the path leading to life. Let that sink in. The odds are not in our favor.

This leads naturally to the next set of questions taken up in [Part III](#). If love is fundamental to reality, why is deception so powerful? Why are humans so vulnerable to distortion, manipulation, and self-deception? Why does evil so often operate through the corruption of trust itself?

Freedom and Faith

God's Self-Revelation

Scripture does not present God as a distant observer who leaves humanity to navigate reality alone, but as one who continually draws humanity to Himself, invites inquiry and responds to those who seek Him.

Previously, a concept referred to as the *Hiddenness of God* was introduced. To summarize, God doesn't fully reveal Himself to humanity in order to preserve our free will. This raises a grave concern. Has He hidden Himself so much that one might never notice? This concern, however, doesn't stand up to the scrutiny of Scripture. Scripture says that God will draw all people to Himself for the purpose of establishing relationship.¹⁴⁹ The table below summarizes the different means He uses—personally, I've experienced them at different times and to different degrees.

Table 15: Methods of God's Self Revelation

Concept ¹⁵⁰	Development
Jesus of Nazareth	God is revealed most clearly in Jesus. He declared Himself as <i>the</i> way to establish relationship with God and His resurrection proved He was God. His life was one of service and care for others. During his lifetime, some of His contemporaries rejected Him despite witnessing miraculous healings and authoritative teaching.
God's Spirit	Humans may feel His conviction internally and sense someone or something is beckoning. It's easy to ignore—even for redeemed persons.
Scripture	God's word is alive and active, capable of penetrating our innermost being to reveal truth. Somehow we can sense what it's saying just might be true.
Conscience	Our conscience is an internal moral monitor which perceives and evaluates the situations we encounter and influences our minds in a particular direction. Our conscience can be trained, corrupted, obeyed and ignored.
Cosmos	The starry night sky points to God and humans often intuit a creator. Creation provides objective revelation and invites faith; it's easy to ignore or suppress this revelation. Some astronauts speak of a profound sense of awe from their experiences in space. ¹⁵¹

Concept ¹⁵⁰	Development
Nature	Nature displays beauty, order, interdependence, and life on scales ranging from ecosystems to microscopic biology. Humans often experience awe, peace, wonder, or transcendence through encounters with mountains, forests, oceans, storms, animals, and living systems. Nature provides continual, accessible revelation that can awaken gratitude, humility, and reflection, yet it too can be overlooked, reduced to physical mechanism, or taken for granted.
Providence	People sometimes experience unexpected convergences of circumstances, encounters, opportunities, or timing that appear meaningful and difficult to dismiss. Such events may be interpreted as coincidence or as evidence of God's quiet guidance. Because they are rarely coercive, they invite reflection without compelling belief.
Human Relationships	Love, trust, self-giving, forgiveness, and covenantal commitment provide lived analogies for understanding a relational God. The human need for relationship—and the deep fulfillment found in being known and loved—may reflect humanity's creation for relationship with God and others. Not only do we observe love in our lives, but in other's too.
Eternity in our Hearts	Humans sense transcendence and are driven to seek. The tension we sense, but cannot fully, grasp prompts seeking.
Desire / Dissatisfaction	Humans long for meaning and fulfillment beyond what we accomplish in our work-life. Dissatisfaction points to something beyond self.

One key concept clearly stands out from all the ways God reveals Himself: they're all *non-coercive*—they can be easily ignored if one chooses. Nevertheless, they reveal God is real in ways that are clear to each of us—if we listen. They're real signals.

I'd like to draw your attention to one concept in particular—moral conscience. We all have a conscience which gently pushes us to act in ways that establish and build relationships, to have loving behavior. It's an echo of God's love. Our conscience could have been made so strong that it would be impossible to ignore—but that would violate our free will. The one thing that all humanity has, our conscience, points us in the direction of love, but does not force us. This suggests humans were *designed* for relationship.

More surprising still, Scripture itself appears to operate in a profoundly non-coercive manner. It reveals, invites, persuades, warns, convicts, and calls, yet it does not compel belief in the way a mathematical proof compels assent. The same text can lead one person toward faith, another toward skepticism, and still another toward indifference. Even Jesus taught in parables that both revealed and concealed truth. Some listeners perceived wisdom and beauty; others walked away confused or offended. Revelation was genuinely present, but it still required response. Scripture consistently portrays the human condition not merely as lacking information, but as involving the heart, the will, and one's openness to truth.

Marbles in God's Jar

Given that we all [begin our lives separated from God](#), how do each of us fill up God's marble jar of trust? Here are two key concepts that may help:

1. God is the initiator in our relationship with Him. We are the responders. This is clear from Scripture. [Revelation 3:20 \(NIV\)](#) states, *"Here I am! I stand at the door and knock. If anyone hears my voice and opens the door, I will come in and eat [establish relationship] with that person, and they with me."* Since God is the first mover, we just need to "notice" His self-revelation and respond.
2. God invites our inquiry and promises to respond. [Matthew 7:7-8 \(NIV\)](#) states, *"Ask and it will be given to you; seek and you will find; knock and the door will be opened to you. For everyone who asks receives; the one who seeks finds; and to the one who knocks, the door will be opened."* Therefore, we ask (prayer) and listen; we search and find; and when opportunities arise to encounter God, we take them.

Table 16: Responding to God's Self Revelation

Concept	Development
Jesus of Nazareth	Read the New Testament's gospels. Ask whether His life and teachings are better explained by deception, legend, madness, or truth.
God's Spirit	If you sense His message to you, do what's being asked and see what happens next. Pay attention to persistent conviction that calls you toward humility, honesty, forgiveness, or love. Caution: Scripture tells us to "test" these thoughts before taking action to verify they're sourced from God (see the remedy's set of constraints). ¹⁵²
Scripture	Read Scripture. See the suggestions in the Epilogue . Read slowly and honestly enough to allow yourself to be challenged rather than merely confirmed. Contemplate what you read.
Conscience	Take note when your conscience is "pricking" you. Is it aligned with what you know about Scripture? Notice recurring moral failures or regrets and ask why humans experience guilt at all.
Cosmos/ Nature	Spend time in a Dark Sky Park ¹⁵³ or National Park. Spend time observing nature without distraction or entertainment competing for attention.
Providence	Take note of unexpected convergences. Ask yourself whether they are merely coincidence or evidence of God's quiet guidance. Reflect on what these events may be inviting you to notice.
Human Relationships	Take note of your life when you have a relationship that's especially rewarding or you see the same in someone else. Do you want to express gratitude to someone? Observe how trust, sacrifice, and forgiveness deepen relationships while selfishness corrodes them.

Concept	Development
Eternity in our Hearts	Take note when you're wondering about the afterlife. Pray to God, asking Him to show you whether it's true. Ask yourself why humans across cultures consistently seek transcendence, worship, or permanence.
Desire / Dissatisfaction	Take note when you experience yearning for meaning. Pray to God, asking Him to show you where meaning is found. Consider whether finite accomplishments ever fully satisfy the human longing for meaning.

[← Previous](#)
[ToC](#)
[Next →](#)

Faith, Hope and Love

The Apostle Paul famously concluded his brief essay on love in [1 Corinthians 13:13 \(NIV\)](#) with this verse: *“And now these three remain: faith, hope and love. But the greatest of these is love.”* These are often treated as moral qualities, but they may also be understood structurally—as the relational dynamics that initiate, sustain, and fulfill love-centered existence.

Faith makes relationship possible. Every meaningful relationship begins with trust. No friendship, marriage, partnership, or act of cooperation can exist without some willingness to entrust oneself to another person. Humans cannot directly know another person’s motives, intentions, or inner commitments. We infer them through words, actions, sacrifice, fidelity, and character. Relationship therefore requires trust. In this sense, faith is woven into human relationships.

Hope sustains relationships across time. Relationships persist because people believe that growth can occur, promises matter, reconciliation is possible, and the future holds goodness. Hope carries relationship through uncertainty, suffering, distance, disappointment, and even failure. Without hope, relationships can collapse into despair or cynicism. Hope allows people to endure because it looks beyond present difficulty toward future restoration or fulfillment.

Not only does hope sustain behavior, it encourages growth. Everyone hopes to improve their relationships with others or to achieve meaningful goals; hope fuels these desires to persevere. For redeemed people, hope extends beyond the present life. Because we anticipate an enduring relationship with God throughout eternity, hope motivates us to prepare for that future while we’re still alive.¹⁵⁴

Faith and hope are not ends in themselves; they serve something greater. Trust opens the door to relationship. Hope preserves it through time. Love is the reality they are moving toward—mutual self-giving, communion, faithfulness, and flourishing relationship. This helps explain why Scripture calls love the greatest of the three. Love is the culmination and purpose of the entire relational structure.

Love is also the initiating force. In [1 John 4:19 NIV](#), Scripture records: *“We love because he first loved us.”* Love begins in God Himself. Creation, revelation, redemption, patience, mercy, and the invitation to relationship all originate in divine love. Faith is the trusting response to love extended first. Hope rests on the belief that love remains faithful into the future. Love both initiates the relationship and fulfills it.

With the addition of *hope* as a key component, the [progression of thought](#) becomes more coherent and stronger:

- Freedom creates moral openness.

- Moral openness produces relational openness.
- Relational openness produces epistemic openness (the possibility of discovery without compulsion).
- Epistemic openness permits the possibility that more is true than currently known.
- **Hope provides a reason to seek it.**
- Seeking leads to discovery.
- Discovery establishes the conditions for trust.
- Trust makes relationship possible.
- Relationship creates the conditions for love.

Seen together, faith, hope, and love form a coherent relational architecture:

- On the human side: *Faith initiates. Hope sustains. Love fulfills.*
- On God's side:¹⁵⁵ *Love initiates, sustains and fulfills.*

Hope for Unredeemed Persons

While many Scriptural discussions of hope are directed toward redeemed people, hope also plays an important role for those who have not yet entered into relationship with God. Before trust can develop, a person must first believe that seeking is worthwhile. Hope provides the motivation to search for truth, meaning, purpose, and ultimately God Himself.

Scripture repeatedly presents humans as seekers who are invited to pursue answers to life's deepest questions. Such seeking would make little sense if there were no possibility of discovery.

Table 17: Hope for the Un-Redeemed¹⁵⁶

Hope motivates the search for truth and God.
Hope rests on the possibility that God may be found.
Hope exists because God patiently calls people to repentance.
Hope arises from God's invitation to reconciliation.
Hope reflects God's ongoing work of drawing people to Himself.

Hope for Redeemed Persons

For the redeemed, hope takes on a richer and more specific character. Having come to trust God, hope now looks forward to the fulfillment of His promises and our [spiritual growth](#). Hope enables the redeemed to endure suffering, persevere through setbacks, and continue participating in God's transforming work even when the outcome is not yet visible.

God's Spirit empowers our spiritual formation and growth, while hope provides the confidence and perseverance needed to continue participating in that work.

Table 18: Hope for the Redeemed

Benefit ¹⁵⁷	Importance
Hope prevents despair.	People need a reason to keep going when life becomes painful, confusing, or tragic.
Hope sustains believers through suffering.	Suffering is universal; hope helps people endure hardship without giving up.
Hope anchors the soul.	Humans seek stability amid uncertainty, change, and fear.
Hope produces perseverance and endurance.	Long-term goals, relationships, and faithfulness require the ability to keep going.

Hope therefore serves an important role. Faith establishes trust in God's character and initiates the relationship. Hope carries that trust forward into the future, sustaining believers as they await the fulfillment of God's promises and the completion of His transforming work. Love remains both the goal of that transformation and its final fulfillment.

Yet the architecture of reality also appears fractured. Alongside beauty and love stand deception, corruption, suffering, and destruction. If love lies at the foundation of reality, then something has gone terribly wrong. [Part III](#) of the essay explores that rupture.

[← Previous](#)
[ToC](#)
[Next →](#)

Part III: The Realm of Evil

If reality is ultimately grounded in love, then we must also confront one of the deepest questions of human experience: *Why is there so much evil?* Human history is marked by deception, suffering, injustice, violence, and loss. Every generation encounters the same troubling reality—that the world is not as it ought to be. The existence of evil has led many to question the goodness of God, while others have concluded that no satisfactory answer exists. Yet the story developed throughout this essay suggests that evil is not an isolated problem to be examined apart from love, freedom, and faith. Rather, it emerges precisely because genuine love requires freedom, and freedom creates the possibility of rebellion, corruption, and harm. In this part, we'll examine the nature of evil, the role of deception, the mystery of suffering, and the ways in which a world capable of love also becomes a world vulnerable to darkness.

Love Corrupted by Deception

Not all evil feels merely human in scale. When people reflect on history, they often notice that harm arises both from isolated individuals and through large institutions and organized systems—governments, economic systems, bureaucracies, organized crime networks, and even respected organizations. Over time these large structures have often produced patterns of exploitation: rulers who expand taxation or conscription to sustain their own power, colonial administrations that extract wealth from distant populations, corporate or financial systems manipulated so gains accumulate for a few while risks fall on many, and bureaucracies that enforce harmful policies long after their moral consequences are obvious. It can be tempting to conclude that institutions themselves are the source of the problem. Yet institutions do not act on their own; they're run by people. What institutions often do is amplify human behavior. They concentrate power, diffuse responsibility, and make it easier for individuals to pursue self-interest without directly confronting the human cost. The old observation that *"power tends to corrupt, and absolute power corrupts absolutely"* reflects a recurring pattern of human behavior operating within systems of authority. For this reason, evil is often experienced not merely as personal wrongdoing but as organized patterns of influence, incentives, and authority that shape how people act. The table below highlights several recurring forms of this kind of structured evil.

Table 19: Examples of Structured Evil

Category	Description	Examples
Transnational criminal exploitation	Durable cross-border networks organize coercion and exploitation for profit, adapting continually to evade law enforcement.	Global human-trafficking networks; international narcotics cartels.
Propaganda and narrative control	Communication systems are deliberately used to shape public perception, mobilize populations, or suppress dissent.	Nazi propaganda under Joseph Goebbels; Soviet state propaganda under Joseph Stalin.

Category	Description	Examples
Terror networks	Ideologically driven groups coordinate violence across regions using decentralized cells, training networks, and modern communications.	al-Qaeda attacks including September 11 (2001); ISIS campaigns in Iraq and Syria (2014–2019).
Genocide and bureaucratized mass violence	State institutions—law, administration, propaganda, and security forces—are coordinated to persecute or eliminate targeted populations.	Holocaust in Nazi Germany (1939–1945); Rwandan genocide (1994).
Ethnic or ideological purges	Societies periodically erupt into organized violence fueled by ethnic, religious, or ideological divisions.	Armenian genocide (1915–1917); ethnic cleansing in the Balkans (1990s).
Persistent warfare	Large-scale organized conflict between societies recurs across centuries despite advances in diplomacy, institutions, and technology.	World War I (1914–1918); Russia–Ukraine war (2022–present).

Scripture offers a further layer of explanation: it portrays evil not only as the product of flawed systems or disordered human desires, but also as the work of non-human intelligences that actively distort trust and breed fear—much as the Serpent did in Eden. These spiritual forces do not override human freedom or remove moral responsibility; rather, they manipulate and amplify the weaknesses already present in us, making our worst impulses seem reasonable. Such claims can provoke strong reactions—either dismissal or unhealthy fascination.

C. S. Lewis cautioned in the preface to *The Screwtape Letters*:¹⁵⁸ *“There are two equal and opposite errors into which our race can fall about the devils. One is to disbelieve in their existence. The other is to believe, and to feel an excessive and unhealthy interest in them. They themselves are equally pleased by both errors.”*

If one allows for the possibility that God exists, then reality may extend beyond the material universe. A creator of the universe would necessarily exist outside the physical system He made. And once the possibility of such a spiritual dimension is admitted, it’s an incremental step to consider that it might include other personal beings—some aligned with good, others with evil—including the Serpent. In that case, the forces shaping human history may not be limited to the visible realm.

Scripture presents a cosmos in which moral and spiritual agency is real, consequential, and ultimately accountable to God. Whether one accepts this unseen dimension or not, the pattern Scripture describes—persistent deception aimed at fracturing trust and corrupting love—remains disturbingly familiar in our world.

Before the creation of humanity, Scripture teaches that God created spiritual beings and endowed them, like humans, with genuine freedom. One of these beings is depicted symbolically as the

Serpent—the prime antagonist in the Garden. Scripture portrays the Serpent as one who rebelled against God and became an adversary by corrupting what God had made.

What motivates such an adversary? Scripture does not provide details, but many theologians have observed that the Serpent gains nothing in the sense of reward or benefit. His actions are oriented toward opposing God by damaging what He loves. In this sense, the evil propagated was parasitic, shattering good while contributing nothing of its own. The Serpent’s defining trait is portrayed as pride, the antithesis of love.¹⁵⁹

Following humanity’s fall, Scripture traces a long conflict centered on God’s promise to heal and restore what had been broken. Throughout the Scriptural narrative, the Serpent appears as one who seeks to frustrate that promise—culminating in opposition to the mission of Jesus of Nazareth. Significantly, the Serpent presented similar temptations to Jesus as he did to Adam and Eve; the result with Jesus was different—He did not succumb to deception.¹⁶⁰ The patterns Scripture describes—fear amplified, trust eroded, truth twisted, communities fractured—are not relics of an ancient world; they remain disturbingly recognizable in our modern times.

The New Testament portrays the ongoing unfolding of God’s Kingdom through the free response of human beings to the [remedy](#). At the same time, it depicts evil as *continuing* to oppose this work through deception, division, and doubt. Scripture does not detail the inner motivations of such beings, but it consistently presents them as purposeful agents whose activity seeks to corrupt trust and sustain rebellion. The Apostle Paul summarizes this reality with sobering clarity: *“our struggle is not against flesh and blood [humanity], but against the rulers, against the authorities, against the powers of this dark world and against the spiritual forces of evil in the heavenly realms.”*¹⁶¹ This struggle, therefore, is not confined to the ancient past; it remains a present reality.

Evil, in Scripture’s account, is not merely personal or psychological; it’s also systemic and spiritual. Yet Scripture is equally clear that these forces are not God’s equals. They cannot defeat Him by power. Instead, they seek to undermine His character through deception, lies, and slander. This is a shrewd strategy, because sheer power cannot answer such accusations. Consider a hypothetical mayor falsely accused of corruption: silencing critics through power would only confirm suspicion, not dispel it. What is required is a demonstration of integrity so compelling that the accusation collapses under its own weight.

In the same way, Scripture presents God’s response to evil as self-giving love. Even as deception continues, God reveals His character to humanity through patience, faithfulness, and ultimately through Jesus Himself—the true image bearer. Spiritual warfare,^{162, 163} then, is not merely a clash of power, but a cosmic contest over truth and trust.

Taken together, the activity of evil spiritual forces and humanity’s own disordered passions are Scripture’s explanation for why evil is so pervasive in our world. Love remains the goal of creation; but when love is opposed, its perversion can leave deep and lasting scars.

[← Previous](#) [ToC](#) [Next →](#)

The Mystery of Evil

Rampant evil in our world raises deep questions: *Did God create evil? If God is truly good and all-powerful, why does He allow evil to exist and persist?* The latter is Oxford philosopher J. L. Mackie's "Logical Problem of Evil."¹⁶⁴

University of Notre Dame Professor of Philosophy, Alvin Plantinga, successfully rebutted Mackie's assertion in his book, *God, Freedom, and Evil*.¹⁶⁵ Plantinga writes that God could have a valid reason to permit evil. One reason would be to grant his creatures genuine free will. If God restricted everyone's choices such that they could never make an unloving one, they wouldn't have genuinely free will. Plantinga continues to argue that even an all-powerful God cannot guarantee that genuinely free creatures will always choose love. While it may be *logically* possible to imagine free beings who never sin, it may not be feasible for God to *actualize* such a world without overriding their freedom.

Therefore, evil exists because God's created beings possess genuine free will. When we make poor choices, to one degree or another, bad things happen (sin). God prefers beings who possess free will and can choose either good or evil rather than beings who lack freedom altogether. It seems that genuine love requires genuine freedom of choice; otherwise, as previously stated, God has merely created robots.

At this juncture, it's imperative to state that God did not create evil—He declared his creation "good". Nevertheless, when He created spiritual and human beings, He knew in advance that evil would arise. Knowing an outcome in advance is not the same as causing it. God's foreknowledge of human choices does not make those choices necessary or coerced; they remain genuinely free acts for which the creature, not the Creator, is responsible.

One further clarification may help. When Scripture speaks of God knowing the future, it does not imply that He predicts events the way humans do. Classical Christian thought understands God as existing outside time, seeing all moments—past, present, and future—simultaneously. From that perspective, God's knowledge of human choices does not coerce them; rather, He eternally knows the free actions of creatures within the world He sovereignly sustains.

As in the case of Adam, so it is for us too—our choices are meaningful and carry real outcomes; when we choose sin, we are morally culpable. Free will implies real consequences and genuine justice.

What we often wrestle with is the sense that there ought to be some threshold at which God steps in and curbs evil. We tend to imagine God as a parent watching over children. For the small stuff, a parent won't interfere; but when the screaming or crying starts, they do. Why isn't it the same with

God? Especially in truly horrific acts of evil—why doesn't God, the ultimate authority and embodiment of goodness, step in to prevent the situation from getting worse?

It's worth pausing here for a brief thought experiment. Suppose God chose to eliminate evil at the moment it was about to occur. One way to do this would be to eliminate the person about to commit the act—preventing the harm entirely. At what point would a person be removed—only at the most extreme acts, or also at the moment of hatred, deception, or greed? Who wouldn't be vulnerable to removal at some point in their life? A world governed in this way would reduce to continuous preemption of human action. The very conditions that make love, responsibility, and moral growth possible would be undermined.

Scripture confronts the question of evil head-on. An entire book—[Job](#)—is devoted to it. Many scholars believe Job is the earliest book of Scripture written. If so, perhaps it's not coincidence that Scripture's very first book confronts the mystery of evil. Job, a man described as upright and faithful, loses his children, his livelihood, and his health—not because of hidden wickedness, but because God permits a spiritual adversary to test him. The text is explicit: God is not the author of the moral evil or natural evil (see next section) that Job experiences, yet nothing occurs outside His sovereign allowance.

In anguish, Job demands an explanation. When God finally speaks,¹⁶⁶ He does not offer a detailed justification. Instead, He reveals the vastness of divine wisdom and the limits of human understanding. The answer is not that suffering is trivial, nor that questioning is forbidden, but that God's purposes extend beyond what finite creatures can fully grasp. Pastor and theologian, Tim Keller articulates it this way:¹⁶⁷

"...if evil appears pointless to me, then it must be pointless. This reasoning is, of course, fallacious. Just because you can't see or imagine a good reason why God might allow something to happen doesn't mean there can't be one... If you have a God great and transcendent enough to be mad at because He hasn't stopped evil and suffering in the world, then you have (at the same moment) a God great and transcendent enough to have good reasons for allowing it to continue that you can't know. Indeed, you can't have it both ways."

Yet Job's story does not end in cold detachment. His fortunes are restored, he again has sons and daughters, and his friends who insisted his suffering must have been deserved, are corrected. The book leaves us with tension rather than resolution: God is sovereign, evil is real, and human understanding is partial.

Beyond the story of Job, Scripture consistently portrays God as patient to a degree that far exceeds human tolerance.¹⁶⁸ Evil is permitted for a long time because judgment is restrained. Again and again, divine judgment appears only after prolonged warning, forbearance, and opportunity for repentance.¹⁶⁹ From the days of Noah, to the exile of Israel, to the delayed conquest of Canaan, the pattern is the same: God patiently waits, warns, and endures long before He acts.

Why is God's patience exercised at this scale and for this long? Why is suffering permitted to reach such intensity; why does it fall so unevenly across humanity; why are some evils restrained while others are allowed to unfold; and why do the effects of evil echo across generations? Scripture affirms that God has reasons for His restraint, yet does not disclose them fully. It's here that the mystery of evil remains—finite creatures cannot fully grasp the purposes of a God whose wisdom exceeds their own.

C. S. Lewis, in *The Problem of Pain*,¹⁷⁰ suggests another possible reason for the presence of evil in our world:

“The human spirit will not even begin to try to surrender self-will as long as all seems to be well with it... pain is unmasked, unmistakable evil; every man knows that something is wrong when he is being hurt... pain insists upon being attended to. God whispers to us in our pleasures, speaks in our conscience, but shouts in our pain: it is His megaphone to rouse a deaf world.”

Incredibly, Scripture teaches that suffering is critical for proper transformation of the human spirit. [Romans 5:3-4 \(NIV\)](#) states, “...we know that suffering produces perseverance; perseverance, character; and character, hope.” In other words, God can use evil for our good if we’re in partnership with Him.

We all can become angry at God over our own pain and suffering, or that of someone we love. To this, Peter Kreeft, a Catholic philosopher at Boston College and The King’s College, points out in his book, *Making Sense Out of Suffering*.¹⁷¹

“... the Christian God came to earth to deliberately put himself on the hook of human suffering. In Jesus Christ, God experienced the greatest depths of pain. Therefore, though Christianity does not provide the reason for each experience of pain, it provides deep resources for actually facing suffering with hope and courage rather than bitterness and despair.”

The mystery of evil has resisted a resolution for centuries. Neither philosophy nor theology has produced a fully satisfying account, and even Scripture does not offer a comprehensive explanation. In mathematics, when a problem proves intractable, progress sometimes comes by changing the question—finding another way in.¹⁷² The same may be true here. The way *in* may be a different frame—one grounded in a God who has entered into suffering.

Christianity does not offer a simple explanation for every instance of suffering, but it does proclaim a God who has entered into it. If evil reveals the cost of freedom, it also reveals the depth of God’s commitment to love—a commitment that is neither passive nor resigned, but purposeful.

[← Previous](#) [ToC](#) [Next →](#)

Love's Gambit

The Open Cosmos

A corollary to the problem of moral evil is the problem of natural evil. If God is truly loving and good, why did He create a world in which suffering, injury, and destruction arise apart from human wrongdoing, and many times, without human involvement?

Table 20: Summary - Moral and Natural Evil

Aspect	Description
Free Will	Genuine love requires genuine freedom; evil results from misused freedom.
Soul-Making	Suffering develops character, perseverance, and hope.
Open Cosmos	Nature is granted lawful integrity and openness, allowing real risk.
Spiritual Warfare	Evil spirits actively deceive and corrupt, fomenting rebellion.

Natural evil refers to suffering resulting from the ordinary functioning of the physical and biological structures of creation. It's not caused by personal sin but by the world operating according to stable causal patterns governed by the laws of physics. Earthquakes, hurricanes, disease, and genetic disorders arise from nature doing what nature does.

Natural evil can be broadly grouped into three domains: geological catastrophe, meteorological disaster, and biological suffering.

Geological catastrophes—earthquakes, tsunamis, volcanic eruptions, and landslides—arise from tectonic processes that are essential for habitable continents, mineral recycling, and long-term climate regulation. Plate tectonics renew soil nutrients, regulate atmospheric carbon dioxide, and generate the continents on which terrestrial life depends. The same forces that raise mountains and sustain ecosystems can also devastate cities. A planet without tectonic activity would be geologically inert and far less capable of supporting a complex biosphere.

Meteorological disasters arise from atmospheric systems that distribute heat, water, and energy around the globe. Hurricanes, monsoons, tornadoes, floods, droughts, and avalanches are extreme expressions of the same weather dynamics that make agriculture, freshwater renewal, and ecological balance possible. The violence of storms is not the breakdown of order, but order operating at immense energy scales.

Biological suffering arises from processes such as genetic mutation, cellular competition, and microbial ecosystems—mechanisms without which life could neither adapt, heal, nor persist. DNA replication and mutation enable immune defense and evolutionary resilience, yet they also allow cancer, congenital disorders, and degenerative disease. The capacity of living systems to repair themselves is inseparable from their capacity to malfunction.

Traditionally, Christian theology has understood natural evil as one of the consequences of the Fall. Scripture teaches that post-Fall creation is “subject to frustration” with “bondage to decay.”¹⁷³ This account rightly emphasizes that the world is no longer functioning as originally intended. Yet physicist-theologian John Polkinghorne has suggested that this explanation may not be the whole story. In *Science and Providence: God’s Interaction with the World*,¹⁷⁴ he proposes that God created a world that is not only lawful but genuinely open—a creation granted genuine freedom within the constraints of its laws.

Polkinghorne suggests that God has created nature with real integrity, by which he means that the natural world is allowed to develop according to its own consistent laws—the laws of physics—without being micromanaged by God. From this integrity flows the concept of openness. In Polkinghorne’s view, openness means that the future is not exhaustively fixed by the past: novelty can arise and outcomes are not fully scripted. Integrity concerns the kind of world God has made—one with authentic structure and genuine causal powers—while openness concerns the status of its unfolding future.

Just as God’s love grants humans genuine freedom, Polkinghorne suggests that God—in love—extends an analogous freedom to nature. Not that nature is conscious or agentic, but that creation is allowed to explore the range of possibilities permitted by physical law: to develop, unfold, and interact in ways that are not exhaustively predetermined. Polkinghorne points to several features of the natural world that make such openness intelligible, including chaotic systems (where small uncertainties grow exponentially), quantum indeterminacy, and emergent behavior in complex systems. Together, these mechanisms show how a world can remain lawful and structured, yet genuinely open. Such openness makes life possible—but it also makes tragedy unavoidable. The same processes that sustain life and creativity also carry the potential for destruction.

All three domains described above—geological, meteorological, and biological—are governed by what scientists call chaotic systems: systems that are lawful (obey the laws of physics) and deterministic in principle, yet practically unpredictable due to extreme sensitivity to starting conditions (the point in time at which a prediction is made). Technically, “chaotic” does not mean disordered; it means that small uncertainties in a system’s state grow exponentially over time. This behavior defines a Lyapunov time—the horizon beyond which prediction fails because starting conditions cannot be specified with sufficient precision. Once that time horizon is crossed, the system is unpredictable. Weather forecasting provides a familiar example: despite well-understood physical laws, forecasts beyond one to two weeks (the Lyapunov time) become inherently unreliable. In such systems, unpredictability is not a defect of nature, but a built-in feature of openness.

That said, God remains fully sovereign and able to act decisively within creation; nevertheless, this openness does not mean the future is secretly fixed. In an open world governed by lawful and chaotic processes, God may act selectively and providentially—shaping contexts, restraining certain outcomes, or enabling goods—without scripting the free choices of humans. Openness remains genuine because God ordinarily allows creation to unfold without control, permitting even outcomes He does not desire, while retaining the authority to intervene when His purposes require it. Interpreted through an engineering lens, this means that even imperceptibly small changes in conditions can lead a chaotic system to unfold along a very different path, allowing room for providential guidance without the suspension of natural laws. Polkinghorne himself suggests that in a genuinely open cosmos, even God may not know in advance how every indeterminate process

will resolve. While this preserves creaturely freedom, I take a slightly different view of divine knowledge: divine omniscience need not be limited by openness in creation. A God who transcends time can fully know the unfolding of an open universe without coercing it—just as knowing the outcome of a human endeavor does not entail causing it.

A skeptic may object that even if natural evil arises from lawful and open physical processes, God could still have intervened to prevent particular instances of suffering. This objection parallels the classic challenge raised against human free will: if God is truly good, omnipotent, and omniscient, why allow harmful outcomes at all? Plantinga's insight applies not only to moral evil but also to natural evil. The mere fact that God could intervene in a natural process does not mean He should. As Plantinga has argued in the context of human freedom, a moral obligation to prevent an evil arises only if no greater good is secured by allowing it. Where divine restraint preserves such goods, the existence of preventable evil poses no contradiction. In a world intended to possess real integrity, divine non-intervention may facilitate good such as responsibility, trust, and meaningful action on the part of humans. For example, even though we cannot precisely predict when or where an earthquake will occur, we remain responsible to design buildings that don't collapse when one does. If God regularly intervened, we likely wouldn't take our engineering and construction responsibilities seriously.

As such, openness preserves both moral freedom and natural regularity. It makes prayer meaningful, responsibility real, and human action genuinely consequential. Yet it also means that creation's lawful powers are permitted to unfold—even when the outcomes are tragic. God's love is not expressed through a padded simulation but through a real world with real risks.

If Polkinghorne is right, natural evil exists not because creation is purposeless or abandoned but because in love, God *risked* creating a world that's truly alive. A perfectly safe world would not be a perfected world—it would be a lesser one.

In addition to the creative freedom of Polkinghorne's chaotic world, Scripture tells us that spiritual beings—both good and evil—have the capability to manipulate the natural world. For example, in the story of Job, the Serpent is the instigator of calamities that take the form of recognizable natural events—fire falling from heaven (lightning?), killing sheep and their shepherds, and a great wind collapsing a house and killing its occupants.¹⁷⁵ The text leaves the physical mechanisms unspecified, allowing for spiritual agency working through natural processes. In another instance, the Serpent afflicts Job with painful sores all over his body.¹⁷⁶ In a benevolent situation, Jesus calmed a storm.¹⁷⁷

Scripture presents natural evil as the result of multiple, layered causes rather than a single mechanism. We don't know the reason for each instance of natural evil. At the most fundamental level, creation itself is subject to decay as a consequence of the Fall. At times, God also permits or employs natural events as acts of judgment or healing, while spiritual forces of evil further exploit the world's brokenness. These explanations are not rivals, but operate together within a creation that is no longer functioning as it was originally intended.

Love Lives with Risk

This section points to another fundamental truth of God's love: *love lives with risk*. *Love that refuses risk is not love; it's control*. Sit with that thought for a moment. Imagine parents who never permit their child to take age-appropriate risks—their child's growth would be stunted, not protected.

Imagine a spouse who refuses to trust their partner with freedom; such a relationship would be suffocating. In every meaningful relationship, love entails vulnerability, and vulnerability carries risk.

If you genuinely love someone, you want to see them grow and mature. That's true of parents, teachers, and—at their best—managers. In my own experience as an engineer, when managers focus on developing people rather than tightly controlling outcomes, innovation and initiative flourish. Not every manager did this equally well, but the pattern was clear: excessive control suppresses growth and motivation, while trust and freedom invite it. If this is true in human systems, it's not difficult to see why God's love might operate in the same way—seeking our formation rather than our containment.

God could have created a world that functioned entirely on its own, like the planetary motions that require no human guidance or the water cycle that continually circulates across the Earth without our help. Instead, He created a world filled with latent potential that invites human participation. Sand becomes the foundation of modern computing when silicon is refined into microprocessors. Lightning hints at the presence of electricity, but only human ingenuity transforms that discovery into power grids that illuminate cities. Metal ores lie buried in rock—often concentrated in veins that make mining viable—awaiting the ingenuity that extracts and forges them into tools, bridges, and machines. Even animals flourish under thoughtful human care; livestock raised and tended by people become sources of food, clothing, labor, and companionship. Creation therefore contains immense possibilities that unfold through human creativity and stewardship. Yet this design also carries risk. A world that invites human participation must allow human freedom, and freedom always includes the possibility of misuse. But it is precisely this openness that makes love, responsibility, and genuine partnership with God fulfilling. In such a world, we discover both our purpose in shaping creation and our meaning in doing so alongside Him. Yet partnership of this kind cannot flourish without freedom.

Creation, then, is love's gambit—not a gamble born of uncertainty, but a deliberate commitment to a world in which freedom and consequence are real. By "risk," I do not mean uncertainty for God, as though He were guessing at outcomes. Rather, from humanity's perspective, we inhabit a world not mechanically predetermined—a reality in which freedom carries the possibility of both rebellion and responsibility, where natural evil and suffering can harden the heart or deepen compassion, and where love itself can be chosen rather than compelled. As we confront moral evil, we also discover opportunities for growth. Courage, forgiveness, justice, and sacrificial care for others often emerge when love responds to wrongdoing rather than ignoring it. Even societies sometimes find their moral clarity in resisting grave injustice. The resolve of nations that opposed Nazi tyranny during the Second World War is one example often cited. Rather than controlling every outcome, He brought forth a world truly alive—even at great cost—so that love itself might be real.

Part IV: Convergence

We have explored the nature of God, the purpose of humanity, the role of love, the necessity of faith, and the reality of evil. Along the way, we have examined questions that span theology, philosophy, science, human experience, and Scripture. The individual pieces have been considered separately, but they were never intended to stand alone. The purpose of this final part is to bring those threads together and consider the larger pattern that emerges. If the arguments presented throughout this essay are substantially correct, then love is not merely one feature of reality among many. It is the organizing principle that gives coherence to the whole. In these concluding sections, we will revisit the architecture of that vision and reflect upon what it may mean for our understanding of God, ourselves, and the world we inhabit.

The Arc of Love

The World We Live In

What kind of world would God create if He intends real love to exist within it?

If love is genuine, it cannot be coerced. Creation, therefore, must include moral freedom—the possibility of rejection and the risk of betrayal. Such a world inevitably contains vulnerability, contingency, and the possibility of suffering. Not because God is weak, but because love chooses vulnerability. Creation is not merely power displayed; it's vulnerability introduced.

If rejection is possible, suffering becomes possible. And if suffering becomes possible, self-giving love must be willing to bear its cost. The cross of Jesus, then, is not divine improvisation but the deepest revelation of the same self-giving nature that brought the world into existence. Creation says, *"I will share my life."* The cross says, *"I will bear the cost of sharing it."*

Creation is the first act of chosen restraint. In bringing forth free creatures, God willed a reality in which He would not exercise coercive control over every outcome. Love does not grasp or dominate; it invites response. The moment God created beings capable of saying "no," He accepted the vulnerability inherent in love—power held back for the sake of relationship.

If glory means brilliance or dominance, the cross is a contradiction. But if glory is the radiant beauty of self-giving love, then the cross is its unveiling. The Apostle John records that, Jesus, on the eve of His crucifixion declares, *"...Now the Son of Man is glorified and God is glorified in him."* ([John 13:31, NIV](#)), revealing that His glory would be displayed in the ultimate outpouring of self-giving love. In that moment, glory and suffering converge, and divine beauty is unveiled through sacrifice.

Creation's purpose can therefore be understood as bringing others into the life of divine, self-giving love—even at extreme cost to God Himself.

- The universe exists because love moves outward.
- History exists because love refuses to retreat.
- Redemption exists because love absorbs loss rather than abandoning it.

The cross was not necessary because God failed. It was necessary because love does not withdraw. Creation was the first “yes.” The cross was love saying “yes” again after humanity said “no.” When humanity fractured the relationship, God did not undo creation. He entered it.

And this reframes everything:

- Glory is not self-exaltation.
- Sovereignty is not domination.
- Power is not coercion.

In the Christian story, ultimate reality is self-giving love all the way down. If God is eternally love, then everything He does bears that signature: creation expresses it, the cross reveals it, and the new creation completes it.

If this is true, then the universe is not fundamentally mechanical but relational at its core. Meaning is not an illusion; it is built into the structure of reality. The deepest foundation of reality is not cold abstraction but generosity.

Absorbing the Cost of Evil

If God created to display power, evil would be a problem of control. But if God created to share love, evil becomes a problem of freedom. Love requires real choice, real risk, and real consequences. A world capable of genuine love must also be capable of genuine rejection.

This doesn’t explain every instance of suffering, but it explains why God would create a world in which suffering is possible. The crucial distinction is this: in many philosophical systems, God permits suffering while remaining distant from it. In the Christian story, God permits suffering—and then enters it.

The cross shows that God doesn’t eliminate freedom to solve evil; He absorbs the cost of freedom. Evil is neither part of God’s character nor beyond His redemptive reach. Love does not prevent all wounds; it heals them from within.

Seen across the whole biblical narrative, this pattern forms a coherent arc.

Love’s Arc

Creation says – *I will share my life.*

Freedom says – *You may choose.*

The Fall says – *Love is rejected.*

The cross says – *I will bear the cost.*

The resurrection says – *Love cannot be extinguished.*

Restoration says – *You are welcomed back.*

Transformation says – *You are being remade.*

The new creation says: – *Love perfected, corruption gone.*

We instinctively recognize that self-giving love is the highest good. If the universe is grounded in something lower than that, our moral intuition is accidental—a chemical mirage produced by blind forces. But if the universe is grounded in self-giving love, then our deepest intuitions are not illusions. They are echoes.

The most beautiful thing we know—sacrificial love—is not an anomaly in a cold universe. It’s not a heroic exception in an otherwise indifferent cosmos. It’s the signature of reality itself.

Love’s Intended Expression

If love is the signature of reality, where does that love become most visible within creation? There’s a remarkable verse in Scripture, written by the Apostle John, regarding God’s love: [1 John 4:12 \(NIV\)](#):

“No one has ever seen God; but if we love one another, God lives in us and his love is made complete in us.”

It’s not that God’s love is deficient and needs completion, but that it reaches its intended fullness in human relationships.

John begins this verse by noting that God is unseen. How is the unseen God encountered? Through love embodied in human action. God’s love originates in Him, enters humans, and becomes visible in relational life. Love becomes “complete” when expressed outwardly. It’s human participation.

This verse signals a remarkable chain of logic:

1. God is love.
2. Creation is an expression of God’s nature and character.
3. Humans were created in God’s image with the capacity for love, relationship, trust, and self-giving.
4. Scripture declares that God’s love is “made complete” in humans when they love one another.
5. One of the deepest ways God’s love becomes visible within creation is through human relationships.

6. Therefore, humanity fulfills God’s creative design intent when divine love is embodied through human relationships. Or more succinctly, ***Love seeks relationship***.

The Axioms of Love

Up to this point, we’ve traced the storyline of Scripture as the unfolding of divine love—from creation to fall, from corruption to restoration. The narrative is not a loose collection of ideas; it reveals a coherent pattern.

What follows is an attempt to state that pattern explicitly. These axioms¹⁷⁸ are not additional claims layered onto the story, but conclusions drawn from it—principles that help explain why reality is structured the way it is.

Table 21: The Axioms of Love

No.	Axiom / Description
1.	Love creates and shares life. Love is inherently generative. It seeks the existence, flourishing, and participation of others rather than remaining self-contained.
2.	Love grants freedom and responsibility. Genuine love cannot be coerced. It permits meaningful choice and therefore entrusts others with real responsibility, including the possibility of choosing against love (moral evil).
3.	Love lives with risk. The possibility of rejection, betrayal, suffering, loss, and death is inseparable from the possibility of genuine love. A world capable of meaningful relationship must also permit the possibility that love will be rejected or corrupted (moral evil) and that creation will operate with genuine consequence (natural evil), engendering responsibility and stewardship.
4.	Love does not coerce. Love invites, persuades, and reveals itself, but does not compel devotion through overwhelming force or manipulation.
5.	Love absorbs the cost of evil and seeks restoration. Love does not ignore evil, nor does it perpetuate it through retaliation. Instead, it willingly bears cost in order to forgive, reconcile, heal, and restore what has been broken (redemption).
6.	Final outcomes reflect the trajectory of freely chosen love. Love honors freedom. The ultimate consequences of human choices reflect whether love is embraced or persistently rejected.
7.	Humans were created for relationship. Human beings are designed for relationship with God, one another, and creation. Relationship is not incidental to human existence, but central to its purpose.

No.	Axiom / Description
8.	God's creative purpose and human flourishing converge when divine love is embodied through relationships with God and one another. The fullest expression of God's purpose for creation is realized when love becomes visible through freely chosen relationships that reflect His character.

These axioms provide the conceptual framework for what follows: an integrated view of how divine love shapes the structure of reality.

[ToC](#)
[Next →](#)

Faith and Hope in a World of Love

Throughout this essay, faith and hope have been presented as essential aspects of the Christian life. Faith enables trust in God despite incomplete knowledge. Hope sustains perseverance amid uncertainty, suffering, and delay. Yet a deeper question remains: Why do faith and hope exist at all? Are they merely religious requirements imposed upon humanity, or do they arise naturally from the kind of reality God has created?

The Architecture of Love suggests the latter. If God is love, and if reality ultimately reflects His character, then faith and hope are not arbitrary virtues. They emerge naturally from the conditions required for genuine love to exist among free beings.

Love grants freedom. **Freedom** creates moral, relational, and epistemic openness. As discussed earlier, meaningful relationship requires revelation that invites trust without compulsion.

Within such a world, faith becomes necessary. Faith is not a flaw in the system but a natural consequence of it. Faith (trust) becomes the bridge between knowledge and relationship. We learn, observe, reason, and experience, but eventually we must decide whether another person is trustworthy. Every meaningful relationship requires such trust, whether between friends, spouses, family members, or between humanity and God.

Hope emerges in a similar manner. Love seeks growth, restoration, fulfillment, and flourishing. Yet freedom means that these outcomes are not always immediately realized. The future remains partially open from the human perspective. Consequently, faith directed toward the future becomes hope. Hope is trust extended forward in time. It rests upon confidence in the character and promises of the One who is trusted.

The relationship between these ideas can be summarized as follows:

Table 22: From Love to Love

Faith and Hope Emerge from Love.
Love grants freedom.
Freedom creates moral openness.
Moral openness creates relational openness.
Relational openness creates epistemic openness.
Epistemic openness permits the possibility that more is true than currently known.
Hope provides a reason to seek it.
Seeking leads to discovery.
Discovery establishes the conditions for trust.

Faith and Hope Emerge from Love.
Trust makes relationship possible.
Relationship creates the conditions for love.
Love fulfills the process it initiated.

The same pattern can be seen by examining how faith and hope emerge from the Axioms of Love.

Table 23: Emergence of Faith and Hope from the Axioms of Love

Axiom of Love	Consequence for Faith and Hope
Love creates and shares life.	Reality becomes discoverable and meaningful. Faith invites exploration, understanding, and participation in the life God shares.
Love grants freedom and responsibility.	Freedom creates moral and relational openness, making trust necessary and human choices consequential.
Love lives with risk.	Faith necessarily involves vulnerability because trust always carries the possibility of rejection, disappointment, suffering, and loss. Hope sustains trust amid uncertainty.
Love does not coerce.	God's self-revelation must permit trust rather than compel belief through overwhelming certainty. Faith therefore remains a freely chosen response.
Love absorbs the cost of evil and seeks restoration.	Faith grows through demonstrated character, sacrificial action, and proven faithfulness. Hope rests in the expectation that what has been broken can be healed and restored.
Final outcomes reflect the trajectory of freely chosen love.	The object of one's trust matters because choices regarding faith ultimately shape one's destiny. Hope looks toward the fulfillment of love freely embraced.
Humans were created for relationship.	Faith becomes the bridge between limited knowledge and relationship. Hope anticipates the completion of that relationship.

Axiom of Love	Consequence for Faith and Hope
God's creative purpose and human flourishing converge when divine love is embodied through relationships with God and one another.	Faith initiates participation in God's purposes, while hope sustains the journey toward their ultimate fulfillment. Both find their completion in love.

[ToC](#)
[Next →](#)

Signatures of Love in Reality

If God is love, then perhaps one of the most important questions we can ask is this: *What would we expect reality to look like?* Shouldn't we expect love's fingerprints to appear throughout the world we inhabit? Consider what we observe:

- Reality gives rise to order.
- Order permits life.
- Life gives rise to persons.
- Persons possess the capacity for love, trust, creativity, sacrifice, and relationship.

Moreover, a relational pattern appears across human existence. Moral conscience points beyond mere survival advantage. Humans possess profound longings for connection, meaning, forgiveness, and permanence. Love generates families, communities, cultures, sacrifice, art, and acts of courage that transcend self-interest. Even though our deepest wounds are often relational, so are our deepest joys.

The pattern extends even to aspects of reality that initially seemed difficult to reconcile with love. As discussed in [Love's Gambit](#), the cosmos operates as an open and dynamic system. The same physical processes that make life possible also permit storms, earthquakes, disease, accidents, and countless other sources of suffering. Such a world involves genuine risk. Yet risk is not necessarily contrary to love. Freedom, growth, courage, sacrifice, and compassion all require conditions in which outcomes are not guaranteed. The very realities that expose human beings to suffering often become the occasions through which love is most visibly expressed.

Table 24: The Open Cosmos Creates Opportunities for Love

Reality Contains...	Love Becomes Visible As...
Danger	Courage
Suffering	Compassion
Need	Generosity
Vulnerability	Sacrifice

Christianity claims that life, consciousness, morality, relationship, and even the redemptive possibilities hidden within vulnerability are not disconnected phenomena. They are signatures. Clues embedded throughout reality which point toward a relational source.

If so, then love is not merely a human invention arising accidentally within the universe. It is closer to the opposite. The universe itself may ultimately arise from love.

The Architecture of Love

Doctrines Viewed Through the Architecture of Love

Throughout this essay, individual Christian doctrines have often been examined through two different lenses. Viewed in isolation, some appear unnecessary, problematic, or perhaps contradictory. Viewed as parts of a larger relational framework, however, they serve an important purpose within the overall architecture. The following examples illustrate how the same doctrine can appear differently when considered as a standalone concept versus as a component within a system whose ultimate purpose is love.

Table 25: Christian Doctrines viewed with the Architecture of Love

Viewed in Isolation	Viewed Within the Architecture of Love
Evil appears incompatible with a good and loving God.	Evil becomes possible in a world where love and freedom are real.
Human freedom appears too costly given the suffering it permits.	Freedom is necessary for love.
God's hiddenness appears inconsistent with His desire for relationship.	Hiddenness preserves freedom and trust.
Faith appears to require belief without sufficient evidence.	Faith is required for non-coercive relationship.
Hope appears unnecessary if reality can be fully known.	Hope becomes necessary because reality preserves interpretive freedom.

Viewed through the lens of relationship, Christian doctrines take on new meaning too. Many of humanity's deepest problems can be understood as relational failures.

Table 26: The Relational Meaning of Christian Doctrine

Concept	Relational Meaning
Sin	More than simply rule-breaking → relationship-breaking.
Disordered Passions	Desires distorted due to separation from God.
Repentance	More than behavioral change → return to relationship.
Redemption	More than atonement → reconciliation.

Concept	Relational Meaning
Eternal Life	Enduring existence with relationship with God.
Hell	Enduring existence without relationship with God.

By now a broader pattern should be visible. Love, freedom, faith, hope, relationship, redemption, and even the reality of suffering are not separate themes competing for attention. They are interconnected parts of a larger structure. Each derives meaning from its relationship to the others. Having explored these pieces individually, we can now view the architecture as a whole.

Block Diagrams

Every good engineering architecture document includes a block diagram. By this point in the essay, the conceptual diagram below should be largely self-explanatory, bringing together the themes developed throughout the discussion. The movement of love through the diagram implies the existence of established relationships through which that love is expressed. The icon of a tablet overlaid with a heart represents the Love Precepts.

The next figure presents the same ideas in the form of a more traditional block diagram. In this diagram, love functions as the “system bus”—the unifying principle that runs through the entire architecture. It originates in God, flows through humanity, and is expressed through the structures of human life. In this diagram, both God’s love and humans’ love flows through the same bus. The

blocks illustrate the major elements of this architecture, while the arrows indicate how love moves through relationships, shaping family, culture, and human creativity, and ultimately pointing toward the restoration of all things in the New Creation.

In both diagrams, it's worth considering what would happen if love stopped flowing from its source in God. The result would be the rupture of every relationship and the collapse of the social structures built upon them—a complete system failure. Engineers might compare it to a total power

outage at a data center followed by the failure of every backup generator. Everything dependent on that power would immediately cease to function. If love truly is the “system bus” of reality, then the permanent loss of that connection would mean the permanent breakdown of the entire relational structure. In theological terms, this is what Scripture describes as hell: the final and irreversible separation from the source of love itself.

Questions of Interpretation

This section addresses a natural question that may remain: *How do we know that reality is ultimately grounded in love?* The discussion that follows examines several interpretive questions and skeptical objections, asking whether love is merely a human preference projected onto the universe or whether it’s the best explanation of the structure of reality itself. Readers primarily interested in the practical implications of the essay rather than these philosophical considerations may wish to skip ahead to the [Epilogue](#).

Many objections to Christianity arise from misunderstandings of its central claims. When viewed primarily as a system of rules, rituals, or rewards and punishments, Christianity can appear arbitrary or unappealing. Yet viewed through the lens of relationship, many of its core doctrines take on a different character as described by the table below.

Table 27: Common Perceptions of Christianity

Common Perception	Relational Perspective
Christianity is primarily a system of rules.	Christianity is fundamentally about relationship with God and one another.
Christianity requires blind faith.	Faith is trust based on sufficient reasons when certainty is unavailable.
Christianity is about getting into heaven and avoiding hell.	Christianity is about entering into genuine partnership with God.
Eternal life is simply endless existence.	Eternal life is enduring relationship with God.
God wants obedience more than relationship.	Obedience serves and protects relationship.

Love might be viewed as merely one human value among many. Why elevate it above reason, power, survival, or beauty? The answer begins with the essay’s method. That love is foundational is reasoned from first principles. Specifically, the essay begins with two stated [axioms](#): that God is Creator of the universe and that Scripture is the [reliable](#) and inspired¹⁷⁹ source of spiritual revelation. If those foundational premises are granted, the question becomes what Scripture reveals to be most fundamental about reality itself, not what humans happen to value most.

Within that framework, love occupies a unique position. Scripture does not merely teach that God is loving; it declares that God *is* love. This is an ontological statement about God’s nature, not

merely a description of His actions. If God is the source of all existence, then love is not simply one virtue among many but a foundational aspect of reality itself. Reason, power, survival, beauty, and other human goods remain important, yet they derive their deepest meaning from the purposes of the One who created them.

Apart from those premises, the remaining answer is that love occupies a unique place within the framework developed here. Love appears as the culmination of a long chain of prerequisites embedded within reality itself. Relationship requires persons. Persons require consciousness, agency, and rationality. Meaningful relationship requires freedom. Freedom creates the possibility of trust, faith, hope, and moral responsibility. Remove any of these elements and genuine love becomes impossible. The claim of this essay is not simply that humans value love, but that reality appears structured in ways that make love possible and meaningful.

A related question is whether humans are simply projecting their highest values onto the universe. This possibility deserves humility and serious consideration. Human beings have often mistaken their preferences for truths about reality. Yet the argument presented here does not begin with a preference and then impose it upon the world. It begins with observations about the nature of persons, freedom, trust, morality, sacrifice, redemption, and relationship. The question is whether these observations are better explained as accidental by-products of impersonal processes or as reflections of a deeper reality in which love is fundamental. The reader must judge which explanation is more persuasive.

This leads to a final question. Even if Christianity provides a coherent account of reality, why conclude that it corresponds to reality itself? Absolute proof remains elusive in every worldview. Every vision of reality eventually reaches a frontier beyond which evidence can inform but no longer compel. At that frontier, the question becomes which explanation best accounts for the world we experience. The Christian claim is not that every mystery has been resolved, but that persons, consciousness, moral awareness, beauty, meaning, longing, sacrifice, and love itself find their most coherent explanation in a reality grounded in a God whose nature is love.

The reader must ultimately decide whether this conclusion is merely an attractive interpretation or whether it corresponds to something objectively true. The central claim of this essay is that the more closely reality is examined, the more it appears consistent with the latter.

[← Previous](#) [ToC](#) [Next →](#)

Epilogue: The Invitation of Love

The central claims of this essay can be summarized in three propositions:

- Reality is structured to make freely chosen loving relationship with God possible.
- Human beings were created for loving relationship with God, one another, and creation.
- Human flourishing is realized through God's empowerment and our willing partnership in the practice of love.

The Christian story is the account of how that purpose was established, disrupted, restored, and ultimately fulfilled.

Viewed through this lens, Christianity offers a surprisingly simple answer to life's deepest questions: *Why am I here? What is my purpose in life?* Scripture's answer: our purpose is to fulfill the cultural mandate—living according to the Love Precepts and our natural gifting. Our meaning is found in partnership with God.

For many of us, this vision resonates with a long-held intuition: that Christianity, if true, is not fundamentally about ritual or obeying rules, but about learning to live a life of love within a community oriented toward that same good. Isn't this what our deepest longings have been pointing toward all along?

Sometimes those longings surface in ordinary human experience—have you ever stood in the mountains and felt profoundly small? Or experienced wonder at the beauty of the natural world on a beach? Scripture teaches that creation declares God's glory.¹⁸⁰ In such moments, God may be initiating grace¹⁸¹—awakening recognition and inviting response without compelling belief. In the words of French mathematician Blaise Pascal, God provides “*enough light for those who seek and enough obscurity for those who resist.*”¹⁸²

Christianity may be less an introduction to something foreign than the naming of what many of us have already been reaching for—and explain why, despite our best efforts, we could never sustain it on our own. It's different because it does not merely commend a way of life; it claims that God Himself empowers it. And when love is thus empowered, real change becomes possible.

But is this love story really true? You have good reason to be skeptical—the story is quite fantastic, perhaps beyond belief for some. That God would create humankind, knowing in advance they would rebel, and that He Himself would become human and pay the ultimate price for His created beings' rebellion is nothing short of extraordinary.

If you're an abstract thinker, you might wonder what it truly cost an infinitely powerful God to love humanity. The power required to create the cosmos is immense—yet compared to infinity, finite. Even the cross—as unspeakably inhumane as it was—culminated in resurrection. Was there a lasting cost? Here's what's easily overlooked: when God became human in Jesus of Nazareth, He did not temporarily assume humanity and then set it aside. He *forever* took upon Himself a human body.¹⁸³ The resurrected Jesus *forever* remains fully divine and fully human. God permanently bound Himself to humanity. That reality reframes the question of cost.

Does God truly want to be your partner? It's not uncommon for people to think that God has far more important things to do than to help us or listen to our prayers.¹⁸⁴ According to Scripture, nothing could be further from the truth:

Psalm 139:1-4 (NIV), “You have searched me, Lord, and you know me. You know when I sit and when I rise; you perceive my thoughts from afar. You discern my going out and my lying down; you are familiar with all my ways. Before a word is on my tongue you, Lord, know it completely.”

Job 31:4 (NIV), “Does he not see my ways and count my every step?”

Matthew 6:8 (NIV), “... for your Father knows what you need before you ask Him.”

Even if you became convinced beyond a reasonable doubt that Jesus was authentic, one step would still remain. Evidence can bring you to the frontier of faith, but you must cross that threshold yourself. Billions of people across cultures and centuries have concluded that Jesus is worthy of that trust, often at significant personal cost.

Is there something holding you back? Would you like for loving behavior to characterize your life? Would you like to live in a society in which this is the shared experience? Would you like God to be your helper?

One other possibility worth considering: are you holding too tightly to your own worldview? Jesus teaches that we cannot enter the KoG unless we approach it as a child.¹⁸⁵ This means we come relinquishing control, not abandoning reason. We approach Him with the humility to recognize that our understanding of reality may be incomplete—or even mistaken. If we insist that His truth must align with our existing worldview, we remain the final authority over our lives—rather than yielding that place to God, as the first Love Precept requires. But if we come with openness—willing to be corrected and reshaped—we can begin to hear what He is saying.

As I reflect on these ideas, I’m reminded of the “catch” described earlier in this essay. It’s one thing to understand the call to love. To embody it consistently is a journey. Like everyone else, I’m regularly reminded of the distance between the life I aspire to live and the life I actually live. The need for grace, forgiveness, transformation, and God’s sustaining presence remains a daily reality for me.

If this story is even possibly true, it deserves serious investigation. Addressing important questions rarely becomes easier when postponed; more often, they fade beneath the noise of ordinary life. The rational response to a claim this consequential is investigation. If this essay has prompted new questions, consider taking the next step in your own search. And if someone you know is wrestling with similar questions, consider exploring them together.

- Learn more about the central person and event in human history. What was Jesus of Nazareth really like? How do you explain the key claims made about Him?
- One of the best next steps is to read Scripture for yourself. Many people who disdain religion or Christianity have never really read Scripture for themselves, much less reflected on it. Unlike every other book, Scripture claims to be “alive and active, penetrating to our innermost soul.”¹⁸⁶ In my own experience, God most often speaks to me during three activities: reading Scripture, praying, and taking long walks in nature. A good place to begin reading is one of the four gospels:
 - The Gospel of Matthew if you like structure and want to see Jesus as the promised Messiah.
 - The Gospel of Mark if you prefer the shortest, fastest-paced, and action-oriented account.

- The Gospel of Luke if you prefer an account that's detailed, orderly, and written with a historian's mindset.
- The Gospel of John if you want an account which is more reflective and theological.
- You might also test the practical wisdom of the Bible. For example, read a chapter from [Proverbs](#) and try applying its guidance in everyday life. Wisdom that proves itself in experience invites deeper trust.

For those more skeptical, here are some questions to consider:

- If you have doubts about the reliability of Scripture or its apparent conflicts with modern science, you can find more information in [Appendix: Scripture & Modern Science](#).
- If, for the sake of argument, you were certain Scripture is true, would you embrace it? If the answer is yes, then *what's preventing you from acting now?*
- If, for the sake of argument, you were certain God's love is genuine, would you like to be in a partnership with God?
- If you're an agnostic, would you like for there to be a God? Would you like it if Jesus of Nazareth turned out to be God's one true Son?
- Consider Pascal's Wager, proposed by the seventeenth-century mathematician and philosopher Blaise Pascal, which approaches belief in God as a decision under uncertainty. Pascal didn't argue that God's existence could be proven with certainty. Instead, he noted that every person must live as though one of two possibilities is true: either God exists or He doesn't. From a decision-theory perspective, the potential outcomes are asymmetrical. If God exists and one places trust in Him, the possible gain is immeasurably large; if God exists and one rejects Him, the possible loss is equally great. If God doesn't exist, the consequences of belief or disbelief are comparatively limited. Pascal's point was that the potential stakes make the question rationally significant and worthy of careful consideration.

One common objection is that the wager appears to assume a particular conception of God when many religious possibilities exist. Pascal's point, however, was not to settle the question of which worldview is correct, but to highlight that the question about ultimate reality carries consequences significant enough to merit serious examination.

If you are convinced of the love and provisions of God, congratulations! Here are some suggestions for next steps.

- Adopt the [remedy](#).
- Find a gospel-devoted local church and start attending. If you live in or near San Jose, California, I'd like to invite you to [Westgate Church](#).

If the arguments of this essay are substantially correct, then we are not living in a universe that merely contains love. We are living in a universe that was created by love, sustained by love, and designed for relationship.

Appendices

Appendix: Foundational Questions

As a systems engineer, I learned that any viable solution must account for the full scope of requirements. A partial solution may appear elegant, but if it leaves key constraints unaddressed, it ultimately fails. Worldviews function in a similar way. Any comprehensive account of reality must account for the full data set—both objective observations and subjective experience. No framework escapes that burden.¹⁸⁷

Science is one of our most powerful tools for understanding reality, measuring physical structures and processes with remarkable precision. Yet it does not have a method for detecting or isolating what is non-physical. This limitation is especially relevant for questions involving consciousness, meaning, moral awareness, and the possibility of a soul. For instance, if the mind or soul is non-physical, it would lie outside the direct reach of scientific measurement, even if its effects within the physical world can be observed.

Table 28: Worldview - Foundational Questions

Why is there something rather than nothing? Modern cosmology indicates that the universe had a beginning. If space, time, matter, and energy themselves came into existence, then so did the immense structure of the cosmos. Causes within the universe cannot explain the origin of the universe itself.

What is the origin of the vast energy present in the universe? Consider the scale of what exists. The atomic bomb used in World War II unleashed a level of energy that devastated an entire city. Modern thermonuclear weapons release roughly two orders of magnitude more energy. Our sun releases roughly eleven orders of magnitude (100 billion times) more energy every second than a modern thermonuclear weapon. Cosmologists currently estimate our universe contains two trillion galaxies with an average of 100 to 400 billion stars per galaxy, each radiating energy on a similar scale. This is not a minimal or trivial reality. The universe contains vast amounts of sustained and highly ordered energy—energy that has driven the formation of stars, galaxies, and the large-scale structure of the cosmos. Where did this incomprehensible amount of energy come from, and why does it exist at all?

Why is the universe governed by stable, mathematically describable laws? Science describes these laws with extraordinary success, but description does not answer why law-like regularity exists at all. Why should the universe operate according to elegant mathematical principles? Who or what established those laws, and why do they hold consistently across space and time?

What is the underlying nature of physical reality? Some of the most fundamental concepts in physics remain difficult to define ontologically. Science can describe with extraordinary precision how phenomena such as energy, mass, charge, fields, and even space-time behave, yet there is no universally agreed account of what these are in themselves. For example, physics can quantify and predict the behavior of energy with extraordinary accuracy, yet exactly what energy *is* remains difficult to explain. Likewise, modern physics treats particles not simply as tiny solid objects, but often as excitations of underlying fields or probability distributions. The mathematical framework is remarkably successful, but the deeper nature of the entities being described remains debated.

Why is the universe life-permitting? The fundamental constants and initial conditions of the universe appear to fall within an extremely narrow range that allows for the existence of stable matter, chemistry, and ultimately life. Minute variations in physical constants or in the ratio of fundamental forces would render the universe inhospitable to complex structures. For example, Martin Rees in his book, *Just Six Numbers: The Deep Forces That Shape the Universe*,¹⁸⁸ points to the nuclear binding parameter ($\epsilon \approx 0.007$), which governs the formation of elements in stars; even slight changes (± 0.001) could prevent the carbon chemistry life depends upon. He also notes that gravity is weak relative to electromagnetism—by roughly 10^{36} . Were gravity appreciably stronger or weaker, stable long-lived stars suitable for life may not exist. Is this the result of chance, necessity, or some form of underlying design? The apparent fine-tuning of the cosmos raises the question of why the universe is configured in a way that permits life at all.

What is life? Not only do we lack a settled ontology of life—what life ultimately is—we must also account for how life emerged from non-life. Evolutionary theory explains how organisms diversify once replication and heredity are in place. It doesn't explain how the first self-replicating system arose. Before natural selection could operate, there had to be something capable of replication, metabolism, and information storage. The transition from non-living chemistry to the first integrated, self-sustaining cell required not merely molecular complexity but coordinated functionality. How such a system emerged from unguided chemical processes remains an open question.

What is the origin of biological information? DNA is not merely chemistry; it contains digitally encoded instructions that guide living systems. The genetic code involves a mapping between nucleotide triplets and amino acids—a translation system that must already function for replication to succeed; in humans, this code is embodied in roughly three billion base pairs within nearly every cell. Information of this kind is not simply matter arranged differently; it operates symbolically. Moreover, DNA functions within an integrated information-processing system involving RNA to transmit and help regulate information, ribosomes to translate code into proteins, molecular machines that carry out cellular operations, and error-detection and repair mechanisms that help preserve fidelity. The origin of such complex, specified biological information continues to invite serious inquiry.

Why is life organized such that *information* produces living beings? Living systems are not governed merely by chemistry, but by information. DNA stores instructions in a symbolic, digital form that can be copied, transmitted, merged, and interpreted in the formation of new organisms. This raises a deeper question. Why should life depend on information at all? Matter and energy alone do not explain why symbolic instructions exist that can direct physical processes toward the formation of living beings. Life is organized around encoded information that must be preserved across generations with sufficient fidelity to maintain continuity, yet remain flexible enough to allow adaptation and variation. The architecture of biology appears fundamentally informational. Why should the existence, persistence, and propagation of life depend on such a system in the first place?

What is consciousness? The relationship between brain activity and conscious experience remains unresolved.¹⁸⁹ Biological information explains how the structures of life are built and maintained, including the brain. Yet it does not, in any straightforward way, account for conscious experience—the fact that there is something it’s like to be a living being.

Neuroscience can describe neural firing patterns and chemical signaling in remarkable detail, yet it’s still debated whether such processes fully account for lived awareness. Why should any of this activity be accompanied by an inner, first-person experience at all—the redness of red, the taste of coffee, or the feeling of pain? Philosopher David Chalmers has referred to this as the “hard problem of consciousness.” Some hold that consciousness is nothing more than brain activity; others argue that it arises from the brain but cannot be reduced to it; still others maintain that mind and matter are fundamentally distinct. No single view commands universal agreement.

Why do we have a moral conscience? Across cultures, humans experience moral obligation in terms of “ought” and “ought not.” Certain acts are not merely inefficient or socially inconvenient; they are wrong. Moral judgments carry a sense of binding authority that exceeds preference or survival strategy. If morality is solely the byproduct of evolutionary survival strategies, why does it feel binding even when it conflicts with self-interest?

What is the origin of human emotion? Love, grief, awe, guilt, longing, joy—these are not incidental features of the human condition. They shape our moral judgments, our art, and our relationships. We do not merely calculate; we feel. If reality at its foundation is impersonal, it’s not obvious why our interior life is so profoundly personal. Emotion is not a peripheral feature of human life; it lies near the center of our identity. Any account of reality must reckon with the depth of our inner life as well as the structure of the outer world.

Why do we seek meaning? Humans create music, art, and systems of purpose. We long for significance. A strictly material account of reality can describe mechanisms, but it does not assign ultimate purpose. As Richard Dawkins once described it, a universe of “*blind, pitiless indifference*” offers no grounding for the human hunger of hope.

What is the origin of individual human gifting? Even siblings—sometimes even identical twins—raised in the same family and environment often display strikingly different talents, interests, and dispositions. Why are human beings not interchangeable units? What accounts for the unique pattern of abilities and inclinations that seems to characterize each person?

Why is there so much evil in our world? Human history is marked by war, conquest, enslavement, cruelty, and genocide. The problem is not merely that suffering occurs in nature, but that moral evil arises from human agency itself. We are capable of compassion and atrocity. Any adequate worldview must account for both the depth of our moral aspiration and the severity of our moral failure.

Is the world strictly physical or does it include a non-physical realm? Is reality strictly material, or does it include non-physical forms of personal agency? Throughout history, many cultures have interpreted moral evil not only in terms of human failure, but also in terms of corrupting spiritual influence. Whether such claims reflect psychological projection or genuine non-material agency is itself a foundational question. If reality includes personal forces beyond the physical, then any comprehensive worldview must account for them.

A common claim in modern discourse is that science and religion are locked in perpetual conflict. Some believe they must choose between believing in science or believing in God. Much of that perceived tension arises from a failure to distinguish between science itself and the philosophy of science. Science is a method for investigating measurable phenomena within space and time. The claim that science is the only reliable path to knowledge (often called scientism), however, is not a scientific conclusion but a philosophical assertion. Popular discussions often blur this distinction. As physicist James Clerk Maxwell once observed, “*Science is incompetent to reason upon the creation of matter itself out of nothing.*”¹⁹⁰ Clarifying that difference helps prevent unnecessary conflict between scientific inquiry and broader philosophical reflection.

The above questions are offered as an invitation to consider the scope and limits of scientific explanation and to make room for philosophical and theological accounts of reality in developing a coherent worldview. Science has achieved extraordinary explanatory success, and many mysteries have yielded to careful inquiry. The point is not to insert God where knowledge is incomplete—i.e., a “God of the Gaps”—but to recognize that certain questions—such as ultimate origin, the emergence of life and information, moral obligation, consciousness, and meaning—are philosophical in nature. Science describes how processes unfold within the universe; questions of origin, order, and intelligibility belong to a different category of inquiry.

The existence of unresolved questions does not invalidate a worldview. The relevant question is which framework best accounts for the totality of the data.

Appendix: Scripture & Modern Science

The purpose of this appendix is to address several common questions surrounding the interpretation of Scripture in light of modern scientific understanding. In many of these areas, multiple interpretations exist. Some of the interpretations most frequently amplified in popular media appear to conflict with contemporary scientific conclusions, leading many to doubt Scripture or to dismiss certain of its narratives as myth or legend. A comprehensive treatment of each issue is beyond the scope of this appendix; instead, the present state of discussion is summarized and references are provided for readers who wish to explore further.

Astrophysicist and founder of [Reasons to Believe](#), Dr. Hugh Ross, describes questions like this through the lens of two “books” sourced by God: the *Book of Scripture* and the *Book of Nature*. Scripture communicates theological truth—who God is, who we are, and the story of redemption. Nature, studied through science, reveals the structure and history of the physical world. If God is truly the author of both, then these two forms of revelation cannot ultimately contradict one another. Apparent conflicts therefore invite careful re-examination of interpretation, whether of the biblical text, the scientific data, or both. The shift from a geocentric to a heliocentric model of the solar system is a well-known example. The deeper question, then, is not whether science or Scripture will “win,” but whether both are being interpreted carefully and with humility.

Scripture claims to be inspired and trustworthy in what it affirms.^{191, 192} At the same time, interpretation requires humility and diligence. Throughout history, believers have refined their understanding of particular passages as knowledge of language, culture, archaeology, and the natural world has increased. The discussions that follow are complex and cannot be resolved exhaustively here, but they illustrate a central conviction: careful scholarship and serious scientific inquiry need not undermine confidence in Scripture.

Has Scripture Been Corrupted Over Time?

Among the questions that frequently arise in modern discussions is whether the biblical text itself has been reliably preserved. Some suggest that the Bible has been copied and recopied so many times that it must be hopelessly corrupted—like the children’s game of Telephone. In that game, a message is whispered from one person to the next in a single chain. Each participant only hears the version immediately before them, so errors accumulate, producing a final message which is usually hilariously different than the original.

But that analogy misunderstands how biblical transmission actually worked. The text of Scripture was not passed along in a single fragile line. Instead, manuscripts were copied in multiple locations, at multiple times, and then distributed throughout the ancient world. When modern translators produce an English Bible, they do not translate from a previous English edition. Instead, they return to the earliest available Hebrew and Greek manuscripts and translate directly from those sources.

In fact, something counterintuitive has happened over time: our modern translations are generally more accurate than earlier ones. Why? Because as archaeology advances and new manuscripts are discovered, scholars are able to compare thousands of copies and refine the text with increasing precision.

The manuscript evidence for New Testament Scripture is especially remarkable. Today we possess more than 5,800 Greek manuscripts of the New Testament, along with over 10,000 Latin manuscripts and thousands more in Syriac, Coptic, and other ancient languages. Some fragments, such as the Rylands fragment of John's Gospel, date within a few decades of the original writings.

By comparison, the works of Plato survive in roughly two hundred manuscripts, and the accounts of Alexander the Great were written centuries after his life. Yet historians do not dismiss Plato or Alexander as legendary because of manuscript gaps. Ironically, the New Testament—the most abundantly attested document from antiquity—is often treated with the greatest suspicion.

At first glance, thousands of manuscripts may sound like a liability. Wouldn't that mean thousands of errors? In reality, the opposite is true. The abundance of manuscripts allows textual scholars to compare copies across regions and centuries. Because manuscripts were distributed geographically—in places such as Rome, Egypt, and Asia Minor—any attempt to deliberately alter the text would have required changing copies already circulating in multiple, distant locations. Such a coordinated alteration would have been historically impossible.

When small variations do appear—typically spelling differences, word order changes, or minor copyist slips—they are cataloged and analyzed in what is known as textual criticism. These variants are documented transparently in scholarly editions of the Greek text. Importantly, no central doctrine of Christianity rests on a disputed passage. The vast majority of the New Testament text is agreed upon across the manuscript tradition.¹⁹³

Translations have changed over time, but not because the text is drifting further from its origins. They improve as scholars discover earlier manuscripts, gain a better understanding of ancient languages, and refine their approaches to translation. Modern translations are based on a broader and earlier manuscript base than was available in the 16th or 17th centuries. Rather than moving away from the original text, they are moving closer to it. New translations are also needed because human language evolves over time. Some words subtly change in meaning, some fall out of common use, and others are added.

Canadian scholar Wesley Huff has produced accessible material explaining how manuscript transmission and textual analysis actually work (wesleyhuff.com). His work highlights an important point: serious textual scholarship is not secretive or defensive. It is careful, methodical, and evidence-driven.

For readers trained in STEM disciplines, this should feel familiar. When multiple independent data streams converge on the same conclusion, confidence increases. Redundancy strengthens reliability. The manuscript tradition of the New Testament is not a single vulnerable chain. It's more like a distributed network with built-in error detection. Below are tables showing manuscript dates as well as a comparison of manuscripts written about other historical figures.

Table 29: Earliest Surviving Old Testament Manuscripts

Manuscript / Source	Date	Content	Significance
Ketef Hinnom Silver Scrolls	c. 700–600 BC	Priestly blessing (Numbers 6:24–26)	Earliest known biblical text; predates exile.

Manuscript / Source	Date	Content	Significance
Dead Sea Scrolls (Qumran)	c. 250 BC – AD 70	Portions of every OT book except Esther	Demonstrates remarkable textual stability.
Great Isaiah Scroll (1QIsa ^a)	c. 125 BC	Complete Book of Isaiah	Shows strong agreement with later Masoretic Text.
Septuagint (Greek Translation)	3rd–2nd century BC	Greek translation of Hebrew Scriptures	Indicates stable Hebrew base text before NT era.

Historical evidence can help establish that the text of the Old Testament has been transmitted with remarkable fidelity across centuries. For redeemed people, however, there is an additional reason to take these writings seriously. Jesus of Nazareth consistently treated the Hebrew Scriptures as authoritative. He quoted them extensively, appealed to them in theological disputes, and spoke of them as bearing witness to God's purposes.

Table 30: Earliest Surviving New Testament Manuscripts

Manuscript / Source	Date	Content	Significance
Papyrus 52 (Rylands Fragment)	c. AD 125–150	Fragment of John 18	Earliest known NT manuscript; within decades of original.
Papyrus 75 (P75)	c. AD 175–225	Large portions of Luke & John	Strong agreement with later major codices.
Papyrus 66 (P66)	c. AD 200	Most of Gospel of John	Nearly complete early gospel manuscript.
Codex Vaticanus	c. AD 325–350	Nearly complete New Testament	Among earliest full NT codices.
Codex Sinaiticus	c. AD 325–360	Complete New Testament	One of earliest complete biblical manuscripts.

Table 31: Composition to Earliest Surviving Copy

Work	Date of Composition	Earliest Surviving Copy	Gap
Isaiah (OT example)	c. 700 BC	c. 125 BC (Great Isaiah Scroll)	~575 years
Gospel of John	c. AD 90	c. AD 125–150 (P52)	~35–60 years

Work	Date of Composition	Earliest Surviving Copy	Gap
Plato	c. 400 BC	c. AD 900	~1,300 years
Alexander the Great biographies	4th century BC	1st–2nd century AD (later manuscript copies)	400+ years

Far from resembling the game of Telephone, the transmission of Scripture resembles something closer to forensic reconstruction—a process in which the original wording can be recovered with an extraordinarily high degree of confidence.

The question, therefore, is not whether the text has been hopelessly corrupted. The evidence indicates that it has been preserved with remarkable fidelity. The more pressing questions become whether what it says is inspired and true. In other words, textual reliability can be distinguished from questions of inspiration and truth.

The Age of the Earth

Few questions generate as much heat—and sometimes as much confusion—as the age of the Earth. For many modern readers, this issue feels like a forced choice: either one accepts a literal six-day creation a few thousand years ago, or one abandons Scripture altogether. But the landscape is more nuanced than that.

Young Earth creationists believe the Earth is less than 10,000 years old. They interpret the six days of the creation account¹⁹⁴ as six literal, consecutive 24-hour periods. The age of the Earth is typically calculated by adding together the genealogies recorded in Scripture¹⁹⁵ and tracing the lineage from Adam forward. This view has a long history in Christianity and is held by many sincere believers. It emphasizes a straightforward reading of the biblical text and a strong confidence in Scripture's authority.

However, it's not the only faithful way the Genesis account has been understood. The creation account has also been interpreted in ways consistent with an ancient Earth by many thoughtful Christian scholars. Emeritus Professor of Mathematics at the University of Oxford and Christian philosopher, John Lennox, addresses this directly in his book, *Seven Days That Divide the World*.¹⁹⁶ Lennox readily acknowledges that Genesis can be read as young Earth creationists propose—but he argues that the text does not *require* that interpretation. The Hebrew word *yom* (“day”) has a range of meanings in Scripture. It can refer to a 24-hour day, a period of daylight, an unspecified span of time, or even an era. Likewise, the Hebrew terms translated “evening” and “morning” can function as markers for the beginning and ending of a period, not necessarily a solar day. The literary structure of Genesis 1 may therefore be communicating theological order and sequence rather than strict chronological duration. Lennox's central point is not that Genesis must describe long ages, but that it may—and that Scripture itself leaves interpretive room.

Much of the young Earth timeline depends on treating biblical genealogies as complete and gapless. Yet scholars have long recognized that ancient Hebrew genealogies were often selective rather than exhaustive. In the Old Testament, the word translated “father” can mean ancestor, and “son” can mean descendant. There are documented examples in Scripture where generations are

intentionally omitted for literary or theological reasons. Genealogies frequently functioned to establish covenant lineage, tribal identity, or theological continuity—not to provide a precise chronological record in the modern sense. For this reason, most biblical scholars agree that it is not possible to calculate the age of the Earth by simply adding up genealogical numbers. The text was not necessarily designed to function as a modern chronological ledger.

Questions about Adam and Eve, human origins, and the relationship between Scripture and evolutionary science continue to be examined carefully. Old Testament scholar John H. Walton has argued that Scripture's creation account is primarily concerned with God bringing order and function to creation rather than describing the material mechanics of its origin. In this reading, Genesis presents a temple inauguration account—a declaration that the cosmos is God's ordered dwelling place. The emphasis is theological: *Who created? Why? For what purpose? Under whose authority?* If this is correct, then Genesis is not competing with modern cosmology or geology. It's addressing a different category of question. Scientific models describing an ancient universe would not necessarily conflict with the theological claims of the text. These discussions are ongoing, but they demonstrate that faithful engagement with Scripture need not ignore scientific data.

The age of the Earth remains a debated topic within Christianity. Some believers hold to a young Earth; others see strong biblical and scientific reasons to affirm an ancient cosmos. What's important to understand is that belief in Christianity does not hinge on a single interpretation of the length of the creation days. The central claims of the faith—that God is Creator, that humanity bears His image, that sin disrupted creation, and that Christ redeems—stand independently of whether the Earth is six thousand years old or billions of years old.

The Scope of Noah's Flood

The account of Noah's flood raises another significant question for modern readers: was the flood *global* in the sense that it covered the entire planet, or was it *universal* in the sense that it destroyed all humanity within the known world at the time?

Many scientists argue that a recent, planet-wide flood is difficult to reconcile with multiple lines of physical evidence. From a systems perspective, several data streams raise questions. First, the volume of water required to submerge all landmasses—including the highest mountains—would be immense. At present, there is no clearly identifiable source for that quantity of water, nor a well-established mechanism for its rapid removal afterward. The Earth's present hydrological system does not appear to contain enough water to cover the globe to that depth without invoking dramatic geophysical processes for which there is limited evidence.

Second, biodiversity and biogeography present additional challenges. If all land animals descended from a limited number of pairs preserved on the ark only a few thousand years ago, the rate of diversification required to produce today's biodiversity would be extraordinarily high. This becomes especially difficult when considering geographically isolated ecosystems such as Australia, where marsupials dominate and native placental mammals are comparatively rare. Explaining the rapid migration, ecological sorting, and speciation required under a recent global model introduces significant biological and logistical challenges. Similar tensions arise when considering ice core layers, coral reef growth sequences, and sedimentary records that appear continuous across long timescales.

Within Christianity, interpretations of the flood range from fully global models to geographically universal models. Theologically, the requirement of the flood narrative is universal, not necessarily global. Genesis presents a situation in which human corruption had become pervasive across all humanity; God’s judgment therefore encompassed all humanity. No independent human population could remain outside that judgment. The universality of the flood, in theological terms, refers to the total scope of divine judgment upon humankind—not necessarily to the total surface area of the planet.

Astrophysicist Hugh Ross argues for a regional yet universal interpretation in his book, *Noah’s Flood: Evidence of a Regional Deluge*.¹⁹⁷ Ross contends that if humanity at the time of the flood was geographically concentrated in the Mesopotamian basin—the cradle of early civilization—then a massive flood confined to that region could have been universal in its human impact while remaining regional in its physical scope. In other words, it could have destroyed all humanity without covering the entire globe.

Ross further notes that the Hebrew word often translated “earth” (*erets*) frequently means “land” or “region” depending on context. In many Old Testament passages, *erets* clearly refers to a localized territory rather than the entire planet. Thus, the Genesis account may be describing the destruction of the entire inhabited land of that era rather than the entire globe.

Scholars continue to debate the timing and mechanism of the flood, but the central theological claim of Scripture¹⁹⁸ is not primarily geological—it’s moral. Human wickedness had become pervasive; divine judgment followed; and yet mercy prevailed through the preservation of a remnant. The narrative ultimately serves the larger biblical storyline of justice, covenant, and redemption.

End Notes

1. As a systems engineer, I've spent much of my career writing technical specifications and related documentation, but not theological essays. In preparing this essay, I used [ChatGPT](#) as an editorial tool to help refine language and clarify expression. The ideas, arguments, and theological framework presented here are my own, developed over time and informed by years of reading and listening to the work of established theologians.↵
2. [The Poetry of Reality with Richard Dawkins | Richard Dawkins vs. Ayaan Hirsi Ali: Political Christian or Truly a Christian?](#), the cited section of the discussion begins at approximately 15:30 continuing through 16:35.↵
3. In this essay, the word "love" means agape (Greek, ἀγάπη) [love]. As characterized by [C. S. Lewis](#), agape is the selfless love that is passionately committed to the well-being of others; the highest form of love. Note: the linked article includes a reference to C. S. Lewis' definition of agape. See also [1 Corinthians 13:1-7](#).↵
4. If this essay is too long or you prefer video media, see [Dr. Michael Heiser | This is the Gospel](#). This video provides a short explanation of the [remedy](#).↵
5. Scripture quotations taken from The Holy Bible, New International Version®, NIV®. Copyright © 1973, 1978, 1984, 2011 by Biblica, Inc.™ Used by permission. All rights reserved worldwide.↵
6. These verses state that God's very nature is love: [1 John 4:8](#) and [1 John 4:16](#).↵
7. See [Exodus 34:6-7](#).↵
8. "Trinity" is the word theologians coined to describe the Father, Son and Holy Spirit, the three-in-one person of God. The word for "trinity" is not found in original texts of Scripture. For further explanation, see [Tim Keller | The Triune God](#).↵
9. This is one of the references describing God's love for other members of the Trinity, prior to the creation of the cosmos, [John 17:24](#).↵
10. That God does not *need* humanity is seen in [Acts 17:25](#).↵
11. Scripture presents worship not primarily as ritual, but as a way of life—living in accordance with the Love Precepts, see [Romans 12:1](#). This differs from the modern use of "worship," which often means intense admiration (e.g., "worshipping" a rock star).↵
12. Classical theologians hold that God created the cosmos for His own "glory", see [Isaiah 43:7](#). This doesn't mean ego or a need for recognition, but the radiant manifestation of God's essence—His goodness, wisdom, holiness, power, and love. In addition, Scripture provides other reasons for creation: delight ([Revelation 4:11](#)), kingship ([Genesis 1:26](#)), relationship ([Revelation 21:3](#)), family ([Isaiah 43:21](#)), and revelation ([Romans 1:20](#)). The unifying theme is that God created in order *to share and display His own life*. Therefore, this essay speaks of creation primarily as an act of love—not in opposition to the classical claim that God created for His glory, but because love is the way humanity most clearly understands and encounters that glory.↵
13. [Mark 10:18 \(NIV\)](#) states, "No one is good—except God alone." See also, [1 John 1:5 \(NIV\)](#), "God is light; in him there is no darkness at all."; theologians interpret "no darkness" as: - God is perfectly holy (no mixture of good and evil) - God is perfectly truthful (no deception) - God is perfectly consistent (no hidden contradictions)↵
14. Murder is forbidden by Scripture because humankind is made in the image of God. See [Exodus 20:13](#); other than self defense ([Exodus 22:2-3](#)) and just wars ([Deuteronomy 20:1-4](#)) only God, as creator, has the right to take human life. However, God delegated to governments the responsibility

for the enforcement of capital punishment, see [Romans 13:1-4](#), [Numbers 35:22-25](#) and [Deuteronomy 19:11-13](#). [Deuteronomy 16:18-20](#) established a legal system responsible for carrying out justice. Scripture also requires the testimony of 2 or 3 witnesses before capital punishment can be invoked, see [Deuteronomy 17:6-7](#).↵

15. The following references demonstrate we were made to have relationships with God and others: [Ecclesiastes 4:9-12](#) describes the value of companionship; [John 17:21-23](#) makes it clear God wants to be “in us”.↵
16. Scripture demonstrates humans have the capability to make moral decisions, see [Genesis 2:16-17](#) and [Deuteronomy 30:19-20](#).↵
17. We all intrinsically know in our conscience what is right and wrong, see [Romans 2:14-15](#).↵
18. See [Genesis 2:24](#).↵
19. This concept is clearer in the original Hebrew literary structure. [Genesis 1:27](#) forms a three-line poetic statement that culminates with the phrase “*male and female he created them*,” suggesting that the image of God is expressed most fully in humanity’s relational existence as male and female.↵
20. We know that God wanted a partnership with Adam and Eve because He walked daily with them in the Garden of Eden ([Genesis 3:8](#)). Another Scripture indicating partnership is [Psalm 127:1](#).↵
21. Keller, Timothy, and Katherine Leary Alsdorf. Every Good Endeavor: Connecting Your Work to God’s Work. New York: Dutton, 2012. ISBN 978-0-525-95270-1.↵
22. See [Deuteronomy 6:5](#) and [Matthew 22:37-40](#).↵
23. Note that we are also commanded to love ourselves. For example, if we were to love and serve others without also caring for our own needs, we could end up being unemployed and a burden on society.↵
24. The Golden Rule, [Matthew 7:12 \(NIV\)](#): “*So in everything, do to others what you would have them do to you, for this sums up the Law and the Prophets.*” Note: the phrase, “the Law and the Prophets”, refers to the entire Old Testament (OT). In this context, importantly it includes the Torah (the Law, the first 5 books of the OT) which includes the long list of rules the Israelites were to obey.↵
25. In other words, if we love genuinely and properly, we need not be concerned with following a set of rules. This concept may be helpful to those who think of Christianity as just conforming to a set of rules. The rules, laws and commandments written in Scripture, are nevertheless, quite helpful in that they explain what loving behavior looks like in various circumstances.↵
26. The rationale for the Love Precepts is given in [Romans 8:10-13](#). See also [1 John 2:10](#).↵
27. See [Luke 10:25-37](#) for the parable of the Good Samaritan.↵
28. This passage encourages us to love our enemies, etc., [Luke 6:27-28](#).↵
29. Two examples from Scripture illustrate sins of the inner life: the Tenth Commandment ([Exodus 20:17](#)), which forbids coveting, and Jesus’ teaching from the Sermon on the Mount, ([Matthew 5:28](#)), which identifies lust as sin.↵
30. See [Wikipedia | Seven Deadly Sins](#).↵
31. See [Colossians 1:15](#).↵
32. See [John 14:9](#).↵
33. This event is known as the “Cleansing of the Temple”, see [Mark 11:15-18](#). The moneychangers were there to exchange government-issued currency, which bore the image of Caesar (and was thus

considered idolatrous by the Jewish religious authorities), with temple currency. Apparently, the money changers were charging exorbitant fees, thus Jesus statement that the temple had been transformed into a “den of robbers.” ↵

34. See [Philippians 2:5-8](#). ↵

35. The following verses describe God, Jesus or the Holy Spirit (aka Advocate) as humanity’s helper: [Psalm 118:7](#), [Hebrews 13:6](#), and [John 15:26](#). ↵

36. Scripture consistently portrays God as entrusting real responsibility to humans rather than overriding their agency. The cultural mandate initiated vice-regency. In one of Jesus’ parables, humans are depicted as servants entrusted with responsibility in the master’s absence ([Matthew 25:14–30](#)); the Apostle Paul, in [Philippians 2:12–13](#), writes that we are to “*work out our [lived] salvation*” while “*God is at work within us*”. Lastly, redeemed people are referred to as friends, not servants ([John 15:15](#)). Together, these themes suggest a pattern of guidance without coercion—one consistent with a relationship that fosters growth, responsibility, and genuine partnership. ↵

37. See [Genesis 2:8-9](#). ↵

38. That the Tree of Life conferred immortality is evident from [Genesis 3:22](#). This is especially important because once the humankind became sinful, it would be quite unloving of God to allow them to remain in that state forever. ↵

39. The trees were real physical trees, but they functioned as divine *sign-acts*—material instruments through which God conveyed spiritual realities that the trees themselves could not naturally produce. ↵

40. See [Proverbs 3:18](#), “*She [wisdom] is a tree of life to those who take hold of her...*”; [Proverbs 11:30](#), “*The fruit of the righteous is a tree of life...*” In [Psalm 1](#), a similar picture is painted, although the tree is not explicitly called the Tree of Life, “*Blessed is the one ... whose delight is in the law of the Lord. ... That person is like a tree planted by streams of water, which yields its fruit in season and whose leaf does not wither—whatever they do prospers.*” ↵

41. See [Genesis 2:15-17](#). ↵

42. Scripture uses the phrase, “good and evil” to refer not just to the knowledge of them, but to discernment using this knowledge to make appropriate moral choices. See [2 Samuel 14:17](#), [1 Kings 3:9](#) and [Hebrews 5:14](#). ↵

43. See [Revelation 12:9](#). ↵

44. See Proposition 14 in Walton, John H. *The Lost World of Adam and Eve: Genesis 2–3 and the Human Origins Debate*. Downers Grove, IL: IVP Academic, 2015. ISBN 978-0830824618. ↵

45. In Scripture, “knowledge” refers to understanding God’s truth—both His revealed will and the reality He has made ([Proverbs 1:7](#); [Hosea 4:6](#)). “Wisdom” refers to the skill of living rightly in light of that truth ([Proverbs 3:13–18](#); [James 3:13–17](#)). Knowledge answers the question, “*What is true?*” while wisdom answers, “*How should I live in light of what is true?*” Thus biblical wisdom is never merely intellectual; it is knowledge applied in obedience, rooted in “*the fear of the LORD*,” which is the beginning of both knowledge and wisdom ([Proverbs 9:10](#)). ↵

46. [Tim Keller | The Bible, The Whole Story: Part 2 - Creation and Fall](#) ↵

47. See [Genesis 3:15](#). ↵

48. In the New Testament, Jesus speaks of the relationship between humans and the Serpent; one example is given in [John 8:44 \(NIV\)](#) in which Jesus is talking with his countrymen, “*You belong to your father, the devil, and you want to carry out your father’s desires.*” See also [1 John 3:8 \(NIV\)](#), “*The one who does what is sinful is of the devil, because the devil has been sinning from the beginning. The reason the Son of God appeared was to destroy the devil’s work.*” ↵

49. See [1 John 5:19](#).↵
50. [James 1:5](#) describes the right way to get wisdom. Scripture also gives the example of King Solomon asking for wisdom so that he could discern between good and evil, see [1 Kings 3:5-15](#).↵
51. See [Psalm 32:8](#), [Proverbs 2:1-6](#) and [Isaiah 48:17](#).↵
52. C. S. Lewis has an excellent discourse on pride, see [4 Ways C. S. Lewis Examines Pride | C. S. Lewis Legacy](#).↵
53. Augustine of Hippo defines pride not as mere arrogance or hatred, but as self-love elevated above love of God, making pride—not hate—the true opposite of love. In *City of God* XIV.13 he contrasts two governing loves: “the love of self even to the contempt of God” and “the love of God even to the contempt of self.” He locates the Fall in this inward turn of the will, writing that “the beginning of pride is man’s falling away from God” (*City of God* XIV.28). In *De Trinitate* XII.11, Augustine describes pride psychologically as the soul “delighting in itself as if it were its own light,” rather than in God. Sin is therefore best understood not primarily as rule-breaking or hatred, but as disordered love—the self replacing God as the soul’s center.↵
54. That God did not rescind humanities status as image bearers after the Fall is evident from [Genesis 9:1-6](#). The cultural mandate is given for the second time in Scripture to Noah (Adam’s post-Fall descendent) along with the status of being an image bearer. At this point in the Biblical story, all individuals are living in the disordered state.↵
55. Mediated shared life was made possible by God through the system of animal sacrifices, employed until ultimate justice was provided through the Messiah. See [Hebrews, chapters 9-10](#).↵
56. See [Isaiah 59:2](#), [Habakkuk 1:13](#) and [Colossians 1:21](#).↵
57. See [Genesis 3:18](#).↵
58. The following passages describe the new heavens and earth: [Revelation 21:1-4](#), [Revelation 22:1-3](#) and [2 Peter 3:10-13](#).↵
59. The following are examples of God allowing humans to have what they want despite his warnings: [Romans 1:18-31](#), [1 Samuel 12](#), and [Numbers 11](#).↵
60. Lewis, C. S. *The Great Divorce*. New York: HarperOne, 2001. Originally published 1946. ISBN 978-0-06-065295-1.↵
61. There are very few people documented in Scripture as having seen the full glory/revelation of God. For those who did, their response is generally terror. See [Isaiah 6:5](#), [Revelation 1:12-18](#). Jesus, in his full glory as God, was revealed to just three of his disciples in an event referred to as the transfiguration, [Matthew 17](#).↵
62. One exception is Jesus crucifixion wounds, which were visible to others, see [John 20:24-29](#). Many theologians have interpreted this as transformed scars rather than wounds. The marks remain as testimony to the crucifixion and redemption, but they no longer represent suffering, damage, or brokenness. Writers such as Thomas Aquinas and John Calvin argued that Christ retained them as a sign of victory and recognition rather than imperfection.↵
63. Sin breaks our relationship with God: [Isaiah 59:2](#); this concept is also reflected in the parable of the Prodigal Son ([Luke 15:11-32](#)).↵
64. That God views idolatry as adultery, see [James 4:4](#).↵
65. When we turn away from God, His emotional response can be described as a jilted spouse, see [Hosea 1-2](#).↵
66. Sin causes God emotional pain: [Genesis 6:5-6](#).↵

67. Theologians have long considered God to be *impassible*—God cannot be manipulated with emotion.↵
68. In Scripture, King David acknowledges that his adultery with Bathsheba and the murder of her husband were ultimately sins against God, see [Psalm 51](#).↵
69. That every human sins is described in [Romans 3:23](#).↵
70. God won't have a relationship with sinful humans: [Isaiah 59:2](#), [Habakkuk 1:13](#) and [Psalm 5:4-5](#).↵
71. "Missing the mark" is the literal etymological meaning of "sin" in the original languages of Scripture. It described an archer shooting an arrow and not hitting the intended target.↵
72. The phrase, "immediate presence" is used to differentiate this type of presence from God's omnipresence. God is always, everywhere, omnipresently, see [Psalm 139:7-8](#).↵
73. See Proposition 17 in Walton, John H. *The Lost World of Adam and Eve: Genesis 2–3 and the Human Origins Debate*. Downers Grove, IL: IVP Academic, 2015. ISBN 978-0830824618.↵
74. See [Exodus 3:14](#). This passage presents God as what philosophers call a non-contingent being—His existence depends on nothing outside Himself. By contrast, humans are contingent beings whose existence depends on our environment, and ultimately on God.↵
75. For the curses of the Fall, see [Genesis 3:14-19](#). No where in this passage of Scripture does it say that human nature was corrupted (i.e., that the curse gave humans a "sinful nature").↵
76. Our internal desires/passions lead us to sin, see [Mark 7:20-23](#) and [Titus 3:3](#).↵
77. See [James 1:13-15](#). Note that [Genesis 3:6](#) describes the same pattern: desire awakened, inward assent and action resulting in sin; [Romans 7:7-11](#) describes it similarly: sinful desire (coveting), deception and transgression leading to death.↵
78. Some theologians have articulated the idea of "Original Sin" which states that Adam's sin and/or guilt was legally conferred to his progeny. According to this view, all are born sinners and judged accordingly even before they've personally committed any sin at all. They interpret the Apostle Paul's writing in [Romans 5:12 \(NIV\)](#), "*Therefore, just as sin entered the world through one man, and death through sin, and in this way death came to all people, because all sinned...*", as conferring sin onto all mankind; however, this verse states that *death*, not sin, was what was conferred (see also [1 Corinthians 15:21-22](#)). Moreover, Scripture teaches that children are not held accountable for the parents' sins, see [Deuteronomy 24:16](#) and [Ezekiel 18:19-20](#).↵
79. The following Scripture teaches that children are not held morally accountable by God:
- When God told Moses he and others wouldn't enter the Promised Land after the exodus of Egypt, God made an exception for children, see [Deuteronomy 1:39](#).
 - When Jonah was arguing with God after he relented on destroying Nineveh (Israel's archenemy), God said He had concern for the innocent children in that city, see [Jonah 4:11](#). ↵
80. The following Scripture describes God as forming humans in the womb: [Psalms 139:13-16](#), [Ecclesiastes 11:5](#) and [Zechariah 12:1](#).↵
81. See [Romans 5:12](#) and [1 Corinthians 15:21-22](#).↵
82. Jesus said the Holy Spirit will be given to those who ask for help ([Luke 11:9, 10, 13](#)); the Apostle Paul states that following the Holy Spirit's guidance prevents sin, see [Galatians 5:16-17](#).↵
83. Scripture says when we're indwelt by His Spirit, we are actually one with Him in spirit, thereby bringing back the close, personal relationship originally present in Eden, see [1 Corinthians 6:12-20](#).↵

84. Any theology on the sinfulness of humans needs to address how Jesus, born of the virgin Mary, is sinless. In this essay, we interpret Scripture to indicate that human beings begin life without moral culpability. On this view, Jesus—who is fully human and fully divine—could live a sinless life from childhood through adulthood without requiring an exception to the human condition. By contrast, theological systems that begin with a doctrine of Original Sin must introduce additional qualifications to explain how Jesus alone escapes its effects. ↩
85. Per [Genesis 2:17](#) and [Romans 6:23](#), the justice owed God is our life; since we want to live, we need a Redeemer to pay the death penalty on our behalf. ↩
86. The coming of the Messiah was prophesied in [Daniel 9:25-26](#) as an “Anointed One”, a ruler. The Jews in Jesus time were expecting a political ruler who would overthrow the Roman government. However, God's intention was always that the Messiah would be a spiritual ruler, inaugurating the Kingdom of God.
- [Psalm 2](#) prophesies a coming Messiah, and taken together with the following passages describes the coming of a new Kingdom based on a new covenant, [Ezekiel 36:22-36](#) and [Jeremiah 31:31-34](#).
 - The Messiah had to be in the lineage of Adam & Eve to fulfill the promise of [Genesis 3:15](#), which was one reason why God preserved Noah and his family from the flood ([Genesis 7](#) et seq).
 - The Messiah had to be in the lineage of Abraham to fulfill the promise that all nations of the earth would be blessed, see [Genesis 12:1-3](#).
 - The Messiah had to be in the lineage of King David so that God's promise would be fulfilled, see [2 Samuel 7:12-13](#) and [Isaiah 9:6-7](#). ↩

94. John the Baptist's teaching is recorded in [Luke 3:10-14](#). ↩
95. A description of the new heavens and earth is given in [Revelation 21:3-5, 23, 25, 27](#). ↩
96. Scriptures teaches that those who don't believe in Jesus will go to hell, [Matthew 10:28](#) and [2 Thessalonians 1:8-9](#). ↩

97. The unredeemed are given resurrected bodies capable of enduring ongoing, eternal ruin, see [Mark 9:48](#) and [Daniel 12:2](#).↵
98. Willard, Dallas. *Renovation of the Heart: Putting On the Character of Christ*. Colorado Springs: NavPress, 2002. ISBN 978-1-57683-323-1, chapter 13, page 256.↵
99. Lewis, C. S. *The Problem of Pain*. Revised edition. New York: HarperCollins (HarperOne), 2015. ISBN 978-0060652968.↵
100. While Scripture does not explicitly state that God's calling will align with our natural gifting, it is reasonable to infer that it will. Why? Because He formed us purposefully in-utero, see [Psalm 139:13-15](#). It would be a contradiction for Him to create us with one set of gifts then ask us to do something entirely different. Similarly, the Apostle Paul indicates that, upon redemption, believers should generally remain in their present circumstances, see [1 Corinthians 7:17-24](#). In other words, we typically aren't expected to change vocations upon becoming redeemed.
- Scripture also tells us that when humans are redeemed, they are given a spiritual gift to be used in building up the local church they attend, see [1 Corinthians 12:1-11](#). Thus, although Scripture never explicitly says that God gave unique gifts to enable humans to fulfill the cultural mandate, if he gave gifts to humans to help the church, it makes sense he would do the same for the cultural mandate.↵
101. See [John 10:10 \(NIV\)](#), "...I have come that they may have life, and have it to the full."↵
102. These verses explain we are saved exclusively by faith in Jesus, [Ephesians 2:8-9](#).↵
103. In this excellent 8-minute video, John Lennox explains why Christianity is different than the other monotheistic religions and why it's not about following rules, [Practical Wisdom | John Lennox: The ONE Thing Christianity Offers That No Other Religion Does](#).↵
104. When human hearts are disordered, some will attempt to please God through religious deeds. Scripture, however, says God is not pleased with this. Some examples:
- Trying to earn God's favor by "works", see [Romans 9:30-32](#).
 - Trying to appease Him via sacrifice, see [Hosea 6:6](#).
 - Trying to honor Him with prescribed festivals, sacrifices, music and singing, see [Amos 5:21-24](#).
 - Tithing, see [Matthew 23:23](#).↵
105. Here's Jesus reply to one of the criminals crucified alongside him, [Luke 23:40-43](#).↵
106. See [Colossians 1:13-14](#), which describes redemption and forgiveness as a present reality for the redeemed, and [2 Corinthians 5:21](#), which explains the exchange at the heart of atonement.↵
107. [Colossians 1:21-22](#) describes redeemed persons as "*without blemish and free from accusation*."↵
108. Our adoption into God's family is explained in [Romans 8:14-17](#).↵
109. [Romans 8:38-39](#) tells us we cannot lose our adoption as children of God.↵
110. See [1 John 4:13](#) and [John 14:15-17](#).↵
111. This book provides an excellent treatise on spiritual transformation: Willard, Dallas. *Renovation of the Heart: Putting On the Character of Christ*. Colorado Springs: NavPress, 2002. ISBN 978-1-57683-323-1.↵
112. See [Romans 7:18-23](#).↵
113. Acknowledgement (aka confession) restores our fellowship with God, [1 John 1:9](#).↵
114. Not everyone who says they're redeemed, actually is, see [Matthew 7:21-23](#); in a related idea, Jesus says we should pay attention to what people do to determine their allegiance, [Matthew 7:15-20](#).↵

115. Scripture warns that false teachers, seeking personal gain, will rise up and cause harm. See [2 Peter 2:1-3](#) and [Acts 20:28-30](#).↵
116. The prohibition of not taking God's name in vain comes from the Ten Commandments, ([Exodus 20:7](#)), *"You shall not misuse the name of the Lord your God..."*. It means much more than not using God's name as a swear word, it means not misrepresenting God or Scripture.↵
117. The full, abundant life is promised in [John 10:10](#).↵
118. The Apostle John describes that we will live like Jesus did, see [1 John 2:6](#). The Apostle Peter summarizes the process of spiritual maturation in [2 Peter 1:3-11](#).↵
119. See [Ephesians 3:14-19](#) and [John 15:9-17](#).↵
120. See [Galatians 5:19-21](#) for a list deeds driven by our human, pre-redeemed self.↵
121. For character traits stemming from following the Holy Spirit's leading, see [Galatians 5:22-23](#).↵
122. That God gives wisdom and guidance for our lives, see [Matthew 7:7-8](#) and [Proverbs 3:5-6](#).↵
123. The redeemed should expect persecution, see [Matthew 5:11-12](#).↵
124. Testing our faith has a purpose, see [James 1:2-4](#).↵
125. Jesus' death paid for the sins of *all* people (see [1 John 2:2](#) and [1 Timothy 2:5-6](#)). But atonement is received only by those who give their allegiance to Him. Atonement is applied to those who entrust themselves to Jesus; those who refuse to remain outside the KoG. The decisive issue in judgment, then, is not moral failure (what we commonly think of as sin), but the refusal to give allegiance—the breaking of the first Love Precept. Yet it's rarely what someone has in mind when they say, *"I'm not a bad person."*↵
126. Within Christian theology, several models of hell have been proposed, including eternal conscious separation, annihilationism, and universal reconciliation. These views differ regarding the duration, outcome, and coherence of hell with divine love. While proponents disagree sharply on whether eternal separation can be reconciled with God's loving nature, all three positions arise from the shared conviction that evil must finally be addressed and that God's redemptive purposes will not coexist indefinitely with unrepented corruption. The account presented here focuses on the common theological concern: how divine love, justice, and human freedom are ultimately brought into final resolution.↵
127. Walls, Jerry L. *Hell: The Logic of Damnation*. Notre Dame, IN: University of Notre Dame Press, 1992. ISBN 978-0268015549.↵
128. Unfortunately, Scripture does not give a detailed, comprehensive description of hell, so we are left to interpret the brief imagery of hell scattered throughout its text. Some texts are: [Matthew 13:41–42, 49–50](#), [Matthew 25:41, 46](#) and [2 Thessalonians 1:8–9](#).↵
129. Butler, Joshua Ryan. *The Skeletons in God's Closet: The Mercy of Hell, the Surprise of Judgment, the Hope of Holy War*. Nashville: Thomas Nelson, 2014. ISBN 978-0849922103.↵
130. These words are recorded in [Matthew 25:40-26](#).↵
131. See [Hebrews 9:27](#), *"...people are destined to die once, and after that to face judgment."*↵
132. Hell is portrayed in the parable of Lazarus and the rich man, see [Luke 16:19-31](#).↵
133. Scripture teaches that "love is from God" ([1 John 4:7](#)), that *"every good and perfect gift is from above"* ([James 1:17](#)), and that God continues to show kindness even to those who don't acknowledge Him ([Matthew 5:45](#), [Acts 14:17](#)). Although humanity is fallen, the image of God remains, and all of us have innate moral awareness. These passages together support the conclusion that genuine human affections, though marred by sin, ultimately depend upon God's sustaining

grace rather than arising independently of Him. Thus, when the unredeemed are separated from God in hell, these affections will no longer be present.↵

134. See [James 1:17](#), [1 John 4:7](#), and [Acts 17:25, 28](#).↵

135. Scripture does not portray hell as a realm devoid of God or one in which He withdraws His sustaining power. God remains sovereign and continues to uphold all things (cf. [Colossians 1:17](#), [Hebrews 1:3](#)). Rather, the biblical language emphasizes exclusion—being “*shut out from the presence of the Lord*” ([2 Thessalonians 1:9](#)) and cast into “*outer darkness*” ([Matthew 25:30](#)). The separation described is not the absence of God’s existence, but exclusion from the blessings of His presence.↵

136. Lewis, C. S. *The Great Divorce*. New York: HarperOne, 2001. Originally published 1946. ISBN 978-0-06-065295-1.↵

137. Scripture seems to teach there are degrees of torment in hell ...

- Judgment is proportionate to knowledge and responsibility, [Luke 12:47-48](#).
- Those who rejected greater revelation will face harsher judgment, [Matthew 11:20-24](#).
- Judgment is proportional to moral awareness and conduct, [Romans 2:5-6](#).
- Judgment is based on what each person did, [Revelation 20:12-13](#). ↵

138. The word *faith* in Scripture can mean fidelity, loyalty, or steadfast allegiance. [Revelation 2:10](#) provides one example. Likewise, in [Galatians 5:22](#), many translations render one fruit as “faithfulness” though the underlying Greek word is *pistis*—the same word often translated elsewhere as “faith.” This broader meaning helps explain why biblical faith is frequently portrayed not merely as belief that something is true, but also as relational trust expressed through fidelity and perseverance.↵

139. Michael Guillen. *Believing Is Seeing: Both Seeing and Believing Are Wrong*. Nashville, TN: Thomas Nelson, 2016. ISBN 978-0718038290.↵

143. Michael Guillen. *Believing Is Seeing: Both Seeing and Believing Are Wrong*. Nashville, TN: Thomas Nelson, 2016. ISBN 978-0718038290. Guillen main thesis is this book is that “*Everything we believe—everything—is ultimately based on faith*.” For example, all systems of knowledge ultimately rest upon foundational assumptions that cannot themselves be absolutely proven. Even physics, grounded in years of meticulous observation and experimentation, remains open to revision in light of future evidence. Regarding Einstein’s famous equation, $E = mc^2$, Guillen writes: “*We now have more than a century’s worth of evidence that it’s true. Is that proof? No. Why not? I’ll let Einstein answer it for you: ‘The truth of a theory can never be proven. For one never knows if future experience will contradict its conclusion.’*” Guillen then notes the well-known paraphrase: “*No amount of experimentation can ever prove me right. A single experiment can prove me wrong.*” Note: this is a very accessible, thought-provoking book that doesn’t require a deep knowledge of physics to understand.↵

146. Ibid, page 211.↵

147. The other reason is to honor my late father, who was a Star Trek fan—the section title is a twist on the Star Trek theme, *“Space, the Final Frontier”*. My father was a redeemed person, amateur theologian and teacher, satellite systems engineer and above all, a truth seeker. The subject of faith was one of his favorites. One of his adages was, *“Don’t believe what you want to believe until you know what you should know.”* ↩
148. Readers interested in further exploring some of the themes discussed in this section may enjoy Dan Brown’s *The Secret of Secrets* (New York: Doubleday, 2025; ISBN 978-0-385-54967-0).
- Although a work of fiction, the novel explores questions related to consciousness, the nature of reality, the limits of material explanations, and the possibility that reality may be more complex than it first appears. The story does not argue for the conclusions reached in this essay, but it does invite readers to wrestle with similar questions about faith, knowledge, perception, and the hidden structure of reality. For readers who prefer stories to philosophical argument, Brown’s narrative approach may provide a more accessible way to contemplate these ideas. ↩
149. See [Jeremiah 31:3](#) and [1 Timothy 2:3-4](#). ↩
150. Scripture describes the different persons and methods God uses to reveal Himself and His goodness to humanity:
- The incarnation of Jesus of Nazareth: see [John 1:14](#) and [Hebrews 1:1–3](#).
 - The work of His Spirit in human lives: see [John 16:7-11](#) and [Acts 7:51](#).
 - Scripture: see [Hebrews 4:12](#) and [2 Timothy 3:16](#).
 - Conscience: see [Romans 2:14–15](#) and [1 Corinthians 8:7–12](#).
 - Cosmos and nature: see [Psalms 19:1](#) and [Romans 1:19–20](#).
 - Life Experiences, aka God’s Providential care: see [Acts 14:17](#) and [Romans 2:4](#).
 - Human Relationships: see [John 13:35](#) and [1 John 4:12](#).
 - Eternity in our hearts—the sense that there’s an afterlife which prompts us to seek: see [Ecclesiastes 3:11](#) and [Matthew 7:7–8](#).
 - Desire and dissatisfaction: see [Ecclesiastes 1:1-11](#) and [John 4:13–14](#). ↩

176. See [Job 2](#).↵
177. Jesus calming a storm is described in [Mark 4:35-41](#).↵

178. The term *axioms* is used here in a broader literary and philosophical sense rather than its strict mathematical meaning as used in [Part II](#) of this essay. The principles described in this section are not assumed at the outset of the essay; rather, they emerge from the preceding analysis as foundational conclusions. They are presented as “axioms” because they function as the core principles from which the architecture that follows naturally emerges.↵
179. Much has been published on the crucial topic of the Doctrine of Inerrancy. This doctrine declares that Scripture is inspired by God and without any error as written the *original* language of the human author. For example, see [Chicago Statement on Biblical Inerrancy](#) and [Wes Huff | What are the Biblical Autographs](#).↵
180. That there is sufficient revelation of God in nature is described in [Romans 1:19-20](#) and [Psalm 19:1-4](#).↵
181. This grace is an example of what theologians call prevenient grace. Prevenient grace refers to the grace that “comes before” conscious faith. It’s God’s initiating work in every human life, providing sufficient light, moral awareness, and inward prompting to make genuine response possible. This grace does not coerce belief or override human freedom; rather, it enables it. By awakening conscience, revealing Himself through creation, and drawing individuals toward truth, God makes loyalty possible without making it inevitable. The following Scripture states that God is drawing humanity to Himself: [Titus 2:11](#), [John 12:32](#), [Jeremiah 31:3](#) and [I John 4:19](#).↵
182. Pascal, Blaise. *Pensées*. Translated by W. F. Trotter. New York: E. P. Dutton, 1958.↵
183. The incarnation of God’s Son is presented in Scripture as an irreversible and enduring union of divine and human natures (not temporary). Following His resurrection, Jesus explicitly affirms the continuing reality of His embodied humanity ([Luke 24:39](#)), ascends bodily into heaven ([Acts 1:9–11](#)), and is subsequently identified in heaven as the “Son of Man” standing at God’s right hand ([Acts 7:56](#)). The permanence of this union is further implied by the pattern of hope, wherein believers’ future resurrection is conformed to Christ’s existing glorified body ([Philippians 3:20–21](#)), presupposing the continuity of His own embodied state. Taken together, these texts provide the scriptural basis for the classical confession articulated at Chalcedon (AD 451), that in the one person of the Son the divine and human natures remain united *without separation* permanently.↵
184. Scripture’s authors also wondered whether God had time for humankind, see [Psalm 8:4](#) and [Job 7:17-18](#).↵
185. The following Scripture states that we must approach spiritual truth as would a child, [Matthew 18:34](#) and [Luke 18:16-17](#).↵
186. That Scripture is “alive and active,” see [Hebrews 4:12](#).↵

192. Much has been published on the crucial topic of the Doctrine of Inerrancy. This doctrine declares that Scripture is inspired by God and without any error as written the *original* language of the human author. For example, see [Chicago Statement on Biblical Inerrancy](#) and [Wes Huff | What are the Biblical Autographs](#).↵
